1.Communication interface

RKP-CMU1 can control and monitor RCP-2000 parameter via PMBus communication, and PC can manage whole system by using USB or RS232 or Ethernet to connect RKP-CMU1.

2.RCP-2000 Monitoring and control

RKP-CMU1 can monitor parameter of RCP-2000 such as output voltage, output current, inner temperature, status, serial number and firmware version. It also can turn RCP-2000 on/off together or separately by using "ON/OFF" pin in CN500 or PMBus "CONTROL" pin in JK1 or PMBus "OPERATION" command, shows below. By using PMBus, output voltage and over load protection of RCP-2000 are adjustable.

RKP-1U ON/OFF pin	PMBus CONTROL pin	PMBus OPERATION command	RCP-2000 Output status

3.Real time clock, Data Log and Event Log

RKP-CMU1 has a build-in real time clock data to display actual date/time and for log time stamp. The data logger is designed to store operating data when systems work. It has 1000 recodes and the interval of log is programmable from 1 to 60 minutes. The event log store system condition when alarm occur and remove. There are 600 records in event log.
