## TC40175BP/TC40175BF QUAD D-TYPE FLIP-FLOP

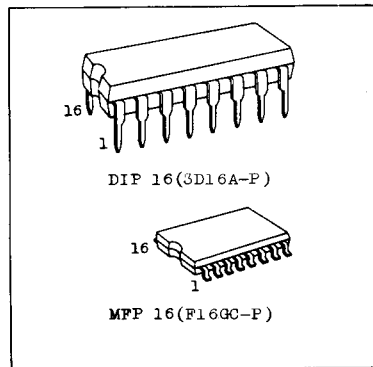

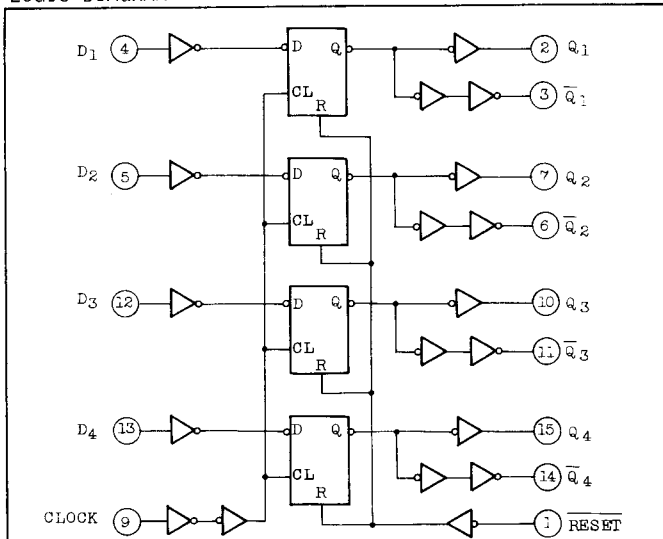

TC40175BP/TC40175BF contains four circuits of D type flip-flop having common clock terminal and clear terminal. The logical input applied to D<sub>n</sub> input is transferred to Q<sub>n</sub> output by the rising edge of CLOCK input.

RESET input is active with "L" level. This has the same functions as TTL 54175/74175 and the pin assignment is also same.
