NOTE	1. All parameters NOT special	Ily mentioned are measured at 230VAC input, rated load and 25 $^\circ$ C of ambient temperature.					
	 Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. Load regulation is measured from 20% to 100% max. Load. 						
	4. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets						
	(as available on http://www.	.meanwell.com)					
	b. Derating may be needed under low input voltages. Please check the derating curve for more details.
