

ELM99xxxA LOW SATURATION VOLTAGE REGULATOR

■ GENERAL DESCRIPTION

ELM99xxxA series is CMOS voltage regulator providing large current. It consists of devices including reference voltage source, error amplifier, low resistance output transistor, short-circuit protection circuit, output voltage setting resistor, chip-enable circuit. Output voltage is fixed internally with high accuracy. ELM99xxxA provides excellent characteristics, such as small input-output voltage difference due to low resistance output transistor, high load stability due to high gain error amplifier.

The chip-enable function is available in three selections, no-chip enable function, active-low ("L" active) and active-high ("H" active).

The package is SOT-89-3 or SOT-89-5. SOT-89-5 is used for chip enable version.

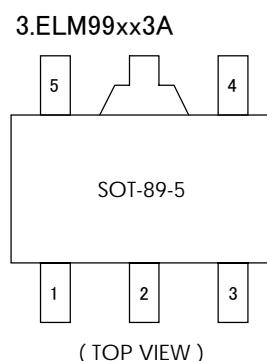

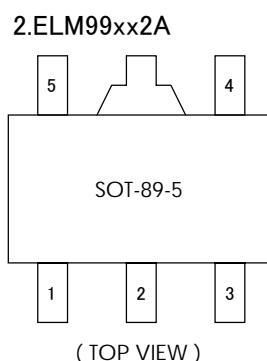

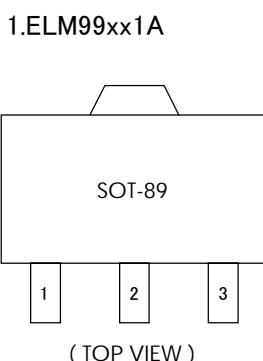

■ FEATURES

- Maximum output current : 300mA (Internal current limiter operates in case load current exceeds 300mA.)
- High accuracy of output voltage : $\pm 2.0\%$
- Small input-output voltage differential : TYP. 140mV (ELM9930xA I_{OUT}=40mA)
- Low stand-by current consumption : TYP. 0.1 μ A (ELM99xx3A)
- High load stability : TYP. 5mV ($1mA \leq I_{out} \leq 100mA$)
- High input stability : TYP. 0.15%/V (ELM9930xA I_{OUT}=40mA)
- Output voltage range : 2.0V ~ 6.0V (0.1V steps)
- Short-circuit current limiter : TYP. 70mA (V_{OUT}=0V)
- Chip-enable pin available : "L"active ELM99xx2A, "H"active ELM99xx3A

■ APPLICATION

- Cellular telephones
- Palmtops
- Laptop and notebook computers
- cameras and video recorders
- Reference voltage sources
- Battery-operated devices
- PCMCIA cards

■ PIN CONFIGURATION

Pin No.	Pin Name
1	VSS
2	VIN
