

Low Drop Regulator with Signal Interface Logic Circuit for Automotive

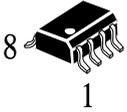

IK1101

Description

The IC is linear voltage regulator 5V with low dropout voltage typically 80mV at light loads and less then 400mV at full loads, with better then 4% output voltage accuracy. In additional IC have logical blokes for additional functions.

Feature

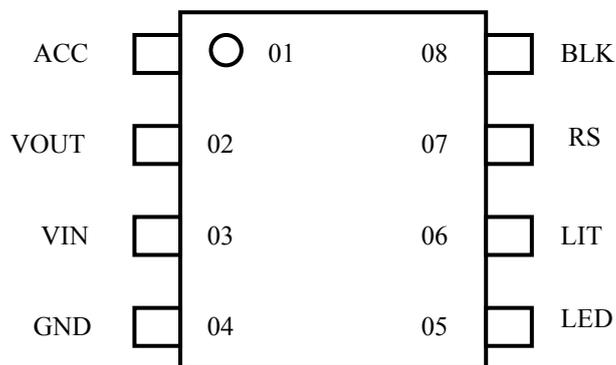

- Voltage regulator 5V with 4% output voltage accuracy
- Low dropout voltage 0.4V Max
- Load current 150mA Max
- Logical blokes for internal back light control
- Over Voltage & Over Temperature Protection
- Short Current Protection
- 60V Load Dump Protection
- Satisfied with AEC-Q100 Standard

Pin Description

PIN	NAME	FUNCTION
01	ACC	Input ACC
02	VOUT	Output regulator voltage 5 V and power supply logic block
03	VIN	Input voltage
04	GND	Ground
05	LED	Output LED
06	LIT	Input LIT
07	RS	Input RS
08	BLK	Output BLK

Dimensioning Information on External Components

The input capacitor C_i is necessary for compensating line influences. The output capacitor C_Q is necessary for the stability of the regulating circuit. Stability is guaranteed at values $C_Q \geq 10\mu\text{F}$ and an $\text{ESR} \leq 10\Omega$ within the operating temperature range.
