Description

The PA2011 is a low on-resistance, single-pole double-throw monolithic CMOS analog switch.

It is designed for low voltage applications with guaranteed operation at 2 V.

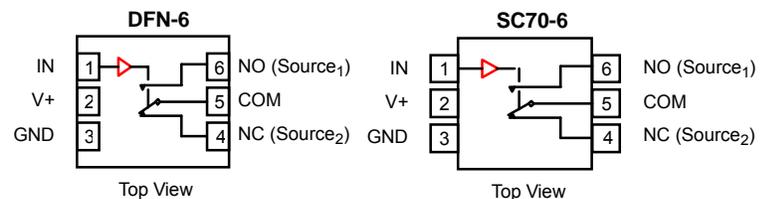

The PA2011 is ideal for portable and battery powered equipment, requiring high performance and efficient use of board space. In addition to the low on-resistance (1.8 Ω at 2.7 V), charge injection is less than 10 pC over the entire analog range.

The switch conducts equally well in both directions when on, and blocks up to the power supply level when off.

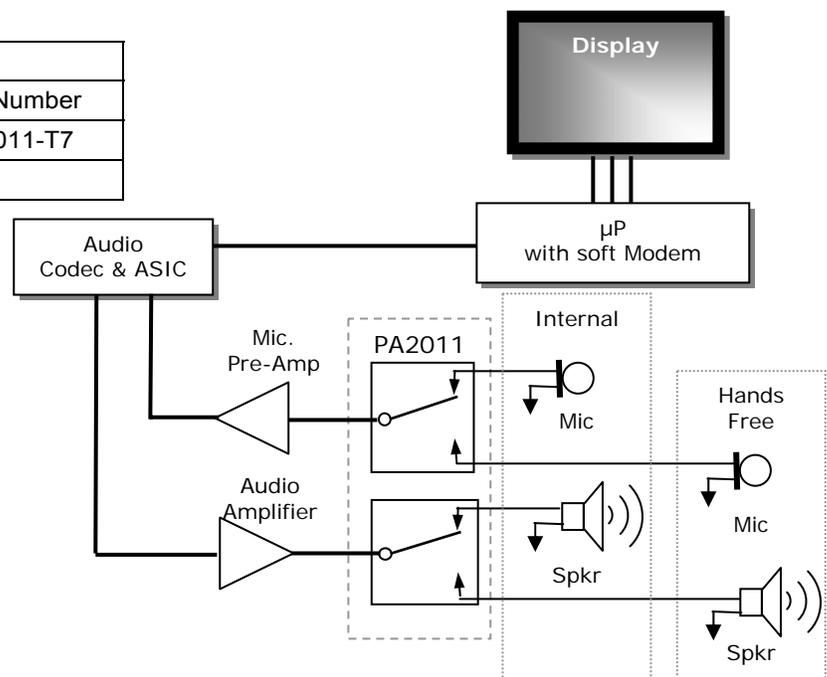

Break-before-make is guaranteed.

The PA2011 is mounted in a 1.6 x 1.6 mm DFN-6 or SC70-6 lead package, reducing board spacing by approximately 40 %

Notes:

1. Room = 25 °C, Full = as determined by the operating suffix.
2. Typical values are for design aid only, not guaranteed nor subject to production testing.
3. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
4. Guarantee by design, not subjected to production test. 5. V_{IN} = input voltage to perform proper function.
6. Guaranteed by 5 V leakage testing, not production tested.
