

PATGUARD - ELECTRICAL SAFETY TESTING SOFTWARE

PATGuard

ELECTRICAL SAFETY TESTING

NEW

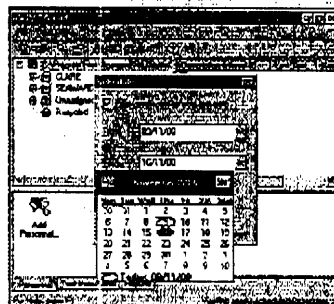

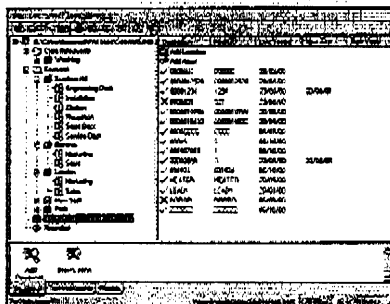

PATGUARD PORTABLE APPLIANCE TESTING SOFTWARE

PATGuard is Seaward's new Portable Appliance Testing Software that takes a significant leap forward for this type of software. Portable Appliance Testing software has never been easier to use. PATGuard's unique presentational program layout enables the software to be used very easily with little or no training. Data change and manipulation are just a couple of mouse clicks away – considerably reducing the time you need to spend with the program. As the program is easier to use

than previous programs it is also quicker to set up using the Set up Wizard.

There is a complete overview of all appliances in terms of locations and test status. Appliances can be simply 'dragged and dropped' from one location to another. Repeat testing requirements can easily be displayed upon the overview of appliances allowing scheduling of re-tests to be conveniently managed and uploaded into Seaward PAT testers.
