

# FT7511

## Reset Timer with Fixed Delay and Reset Pulse

### Features

- Fixed Reset Delay: 7.5 Seconds
- One Input Reset Pin
- Open-Drain Output Pin with Fixed 80ms Pulse
- 1.8V to 5.0V Operation ( $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ )
- 1.7V to 5.0V Operation ( $T_A = -25^\circ\text{C}$  to  $+85^\circ\text{C}$ )
- 1.65V to 5.0V Operation ( $T_A = 0^\circ\text{C}$  to  $+85^\circ\text{C}$ )
- $<1\mu\text{A}$   $I_{\text{CCQ}}$  Consumption
- Zero-Second Test Mode Enable

### Applications

- Cell Phones
- Portable Media Players
- Tablets
- Mobile Devices
- Consumer Medical

### Description

The FT7511 is a timer for resetting a mobile device where long reset times are needed. The long delay helps avoid unintended resets caused by accidental key presses. It has a fixed delay of  $7.5 \pm 20\%$  seconds. The DSR pin enables Test Mode operation by immediately forcing /RST1 LOW for factory testing.

The FT7511 has one input for single-button resetting capability. The device has a single open-drain output with 0.5mA pull-down drive.

FT7511 draws minimal  $I_{\text{CC}}$  current when inactive and functions over a power supply range of 1.65V to 5.0V.

**Note:**

1. The DSR pin must always be tied to either GND or VCC; it must not float.

## Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

## Functional Description

Device default operation time  $N$  is 7.5s. If the DSR pin is pulled HIGH prior to  $V_{CC}$  ramp, the FT7511 enters Test Mode and the reset output, /RST1, is immediately pulled LOW for factory testing. The DSR pin MUST be forced to GND during normal operation. The DSR pin should never be driven HIGH or left to float during normal operation. The DSR pin state should never be changed during device operation; it must be biased prior to supplying the  $V_{CC}$  supply. If there is a need to use the DSR= $V_{CC}$  Test Mode, the /SR0 must be HIGH when the DSR pin is moved from LOW to HIGH to enter Zero-Second Factory-Test Mode. To return to the standard 7.5-second reset time, the same procedure must be followed with DSR=GND. The DSR pin should never be allowed to change state while the /SR0 pin is LOW.

## Operation Modes

A low input signal on /SR0 starts the oscillator. There are two scenarios for counting: short duration and long duration. In the short-duration scenario, output /RST1 is not affected. In the long-duration scenario, the output /RST1 goes LOW after /SR0 has been held LOW for at least 7.5 seconds. The /RST1 output returns to its

original HIGH state 80ms after time  $t_{REC}$  has expired, regardless of the state of /SR0. The /RST1 output is an open-drain driver. When the count time exceeds 7.5 seconds, the /RST1 output pulls LOW.

### Short Duration ( $t_w < 7.5s$ )

When the /SR0 input goes LOW, the internal timer starts counting. If the /SR0 input goes HIGH before 7.5s has elapsed, the timer stops counting and resets; no changes occur on the outputs.

### Long Duration ( $t_w > 7.5s$ )

When the /SR0 input goes LOW, the internal timer starts counting. If the /SR0 input stays LOW for at least 7.5s, the RST output is enabled and pulled LOW. The output RST is held LOW for  $t_{REC}$ , 80ms, as soon as the reset time of 7.5s is met, regardless of the state of the /SR0 pin. When the /SR0 input has returned HIGH and  $t_{REC}$  has expired, the internal timer resets and awaits the next RESET event.

### 0-Second Test Mode

/RST1 goes LOW immediately after /SR0 goes LOW.

**Short-Duration, Normal Operation**  
/RST1 never goes LOW because /SR0 LOW duration did not meet requirement: reset time  $N=7.5s$

**Long-Duration, Normal Operation**  
/RST1 goes LOW because /SR0 LOW duration exceeded requirement: reset time  $N=7.5s$

**0-Second Factory-Test Mode**  
/RST1 goes LOW immediately after /SR0 goes LOW

**LIFE SUPPORT POLICY**

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

**ANTI-COUNTERFEITING POLICY**

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, [www.fairchildsemi.com](http://www.fairchildsemi.com), under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
