

ACE507C

200mA Low Consumption Linear Regulator

Description

ACE507C series is a group of positive voltage output, low power consumption, low dropout voltage, three terminal regulator. It can provide 200mA output current when input / output voltage differential drops to 430mV ($V_{out}=2.8V$), The very low power consumption of ACE507C ($I_q=1.0\mu A$) can greatly improve natural life of batteries.

ACE507C can provide output value in the range of 1.1V~5.5V in 0.1V steps. It also can customized on command.

ACE507C includes high accuracy voltage reference, error amplifier, current limit circuit and output driver module.

ACE507C has well load transient response and good temperature characteristic, And it uses trimming technique to guarantee output voltage accuracy within $\pm 2\%$.

Features

- Low Power Consumption: 1.0 μA (Typ)
- Maximum Output Current: 200mA
- Small Dropout Voltage
- 210mV@100mA ($V_{out}=2.8V$)
- 430mV@200mA ($V_{out}=2.8V$)
- Input Voltage Range: 1.5V~6V
- Output Voltage Range: 1.1V~5.5V (customized on command in 0.1V steps)
- High Accurate: $\pm 2\%$ ($\pm 1\%$ customized)
- Output Current Limit

Application

- Battery Powered equipment
- Power Management of MP3. PDA. DSC. Mouse. PS2 Games
- Reference Voltage Source Regulation after Switching Power

Absolute Maximum Ratings

Typical Application Circuit

Note 1. Input capacitor ($C_{in}=1\mu F$) is recommended in all application circuit. Tantalum capacitor is recommended.

2. Output capacitor ($C_{out}=1\mu F$) is recommended in all application to assure the stability of circuit. Tantalum capacitor is recommended.

ACE507C

200mA Low Consumption Linear Regulator

Explanation :

ACE507C is a series of low dropout voltage and low power consumption three pins regulator. Its application circuit is very simple, which only needs two outside capacitors. It is composed of these modules: high accuracy voltage reference, current limit circuit, error amplifier, output driver and power transistor.

Current Limit module can keep chip and power system away from danger when load current is more than 200mA.

ACE507C uses trimming technique to assure the accuracy of output value within $\pm 2\%$, at the same time, temperature compensated is elaborately considered in this chip, which makes ACE507C's temperature coefficient within 100ppm/ $^{\circ}\text{C}$.
