SRS05A-XX Series

Miniature, Non-isolated **5A Output, Switching POL Regulators**

Key Features:

- 5A Output Current
- Efficiency to 94%
- EN 60950 Approved (UL)
- Compact SIP Case
- Wide Input Range
- Short Circuit Protected
- Thermal Shutdown
- Remote On/Off Control
- Industry Standard Footprint Output

Electrical Specifications

Specifications typical @ +25°C, nominal input voltage & rated output current, unless otherwise noted. Specifications subject to change without notice.

Conditions	Min.	Тур.	Max.	Units

Notes:

- 1. Measured over a bandwidth of 5 Hz to 20 MHz using a 1 μ H inductor. 2. Line regulation is measured for a V_{IN} change from low line to high line, with
- Line regulation is measured for a vin change from low line to right line, with Vour set to 1.8 VDC.
 Output ripple is measured at 20 MHz bandwidth using a 1.0 μF ceramic
- 3. Output ripple is measured at 20 MHz bandwidth using a 1.0 μ F ceramic capacitor and a 10 μ F tantalum capacitor connected in parallel as close to the output terminals as possible. For the **SRS05A-12-5.0**, when set for a 5 VDC output, the output ripple and noise is:

Peak to Peak	75 mV P - P
RMS	45 mV RMS

- 4. Transient recovery is measured to within a 1% error band for a 50% load change.
- These units include a non-latching over temperature protection circuit. If
 the temperature exceeds approximately 120°C at the monitored "hot spot",
 the unit will be shut down. When the temperature decreases, the unit will
 automatically restart.
- These units will provide up to 150% of rated current. In the event of an over current fault, the unit will go into hiccup mode until the fault is removed.
- Standard units feature an active high remote control input. See the note and diagram at right.
- 8. These units do not include an internal fuse. It is recommended that an external slow-blow fuse be used with a rating as shown in the table above.

Remote On/Off

These units include an active high On/OFF control input. The unit is "ON" if the input to the control pin (pin 5) is high; or if the pin is left open (or floating). The signal level of the control input is referenced to ground. A recommended drive circuit for the control pin is shown at left. The resistors R1 & R2 have been added to help reduce possible false triggering of the control input due to leakage currents.

Units are available with an active low control input. With this input, the unit will remain off if the control input remains above 2.8 VDC. For more information on the active low option, contact the factory.

Output Voltage Trim

The output voltage level of the **SRS05A** series is adjustable over a wide range by the simple addition of an external resistor. This trim resistor is connected between the circuit common and the trim input (pin 2), as shown in the diagram above.

SRS05A-05-3.3					
Vout (VDC)	Rtrim ($\mathbf{k}\Omega$)				
0.75	Open				
1.20	41.71				
1.50	22.98				
1.80	14.96				
2.00	11.75				
2.50	6.93				
3.30	3.15				
3.63	2.20				

The output voltage of the **SRS05A-05-3.3** models is adjustable over the range of 0.75 VDC to 3.63 VDC. The required resistor value for various output levels is given in the table above. To calculate the correct value for a different output level, the formula is:

$$R_{\text{TRIM}} = (\frac{21,070}{V_{\text{out}} - 0.75} - 5,110)$$

Where: RTRIM = The external trim resistor
VOUT = The desired output voltage
If a trim resistor is not connected, the output
goes to 0.75 VDC.

SRS05A-12-5.0					
VOUT (VDC)	RTRIM ($\mathbf{k}\Omega$)				
0.75	Open				
1.20	22.33				
1.50	13.00				
1.80	9.00				
2.00	7.40				
2.50	5.00				
3.30	3.12				
5.00	1.47				

The output voltage of the **SRS05A-12-5.0** models is adjustable over the range of 0.75 VDC to 5.00 VDC. The required resistor value for various output levels is given in the table above. To calculate the correct value for a different output level, the formula is:

$$R_{\text{TRIM}} = (\frac{10,500}{V_{\text{out}} - 0.75} - 1,000)$$

Where: RTRIM = The external trim resistor

VouT = The desired output voltage

If a trim resistor is not connected, the output
goes to 0.75 VDC.

The derating curves shown above are approximations of the ambient temperature and airflow required to maintain the switching Pin 6 regulator temperature below its maximum rating. Airflow should move parallel to the long axis of the unit, as shown at left. Proper cooling can

should be mounted approximately 0.5 in. off the unit board. The temperature at this location should not exceed 110°C.

be verified by measuring the temperature at pin six of Q1 (as shown at left). The thermocouple

Typical Connection

www.micropowerdirect.com

Notes: Fuse:

SRS05 regulators do not include an internal fuse. For safety and protection, a external slow-blow fuse should be placed in the input (+VIN) line. A 10A fuse is recommended for the SRS05A-05 and a 7A fuse for the SRS05A-12.

Input Filter:

The unit must be connected to a low AC impedance source, and to avoid loop stability issues, the source inductance should also be low. To significantly reduce ripple caused by the switching action of the POL, the SRS05A includes onboard filtering. However, adding input capacitors C1 and C2 will further reduce ripple currents (C1) and high frequency noise spikes (C2). These capacitors should be placed as close to the input pins as possible (see board layout at right). It is recommended that low ESR $(<100 \text{ m}\Omega)$ and low ESL ceramic capacitors be used. Recommended values are:

C ₁	C ₂
$33 \mu\text{F}$ to $250 \mu\text{F}$	0.01 <i>μ</i> F

Remote ON/OFF: See note on page 2 **Output Trim:** See note on page 2

Output Filter:

Output filtering is not required, but may be used to further reduce output ripple & noise; or to adjust the transient response time of the unit. Care must be taken not to exceed 3,000 μ F, the maximum value of output capacitance the unit is rated for. The values given in the connection diagram are typical for light filtering.

Pin Connections

Pin	Description
1	+V Output
2	Trim
3	Common
4	+V Input
5	Remote On/Off

Notes:

- · All dimensions are typical in inches (mm)
