# MAX9092/MAX9093/MAX9094/MAX9095 General-Purpose, Low-Voltage, Dual/Quad, Tiny Pack Comparators 

General Description
The MAX9092/MAX9093/MAX9094/MAX9095 comparators are pin-for-pin compatible replacements for the LMX393/LMX393H/LMX339/LMX339H, respectively. The MAX9093/MAX9095 have the added benefit of internal hysteresis to provide noise immunity, preventing output oscillations even with slow-moving input signals.
Advantages of the ICs include low supply voltage, small package, and low cost. They also offer a wide supply voltage range, wide operating temperature range, competitive CMRR and PSRR, response time characteristics, input offset, low noise, output saturation voltage, input bias current, and RF immunity.
The ICs are available in both 8-pin SOT23/ $\mu \mathrm{MAX®}$ and 14-pin TSSOP/SO packages.

Applications
Mobile Communications
Notebooks and PDAs
Automotive
Battery-Powered Electronics
General-Purpose Portable Devices
General-Purpose Low-Voltage Applications

Features

# MAX9092/MAX9093/MAX9094/MAX9095 General-Purpose, Low-Voltage, Dual/Quad, Tiny Pack Comparators 

## ABSOLUTE MAXIMUM RATINGS

| Supply Voltage ( $\mathrm{V}_{\mathrm{DD}}$ to $\mathrm{V}_{S S}$ )............................... 0.3 V to +6 V |  |
| :---: | :---: |
| All Other Pins except OUT_ .......... (V) $\mathrm{V}_{\text {SS }}-0$ | + 0.3V) |
| OUT_ ......................................................... $\left.\mathrm{V}_{\text {SS }}-0.3\right)$ to 6V |  |
| Continuous Power Dissipation (Multilayer Board)( $\left.\mathrm{T}_{\mathrm{A}}=+70^{\circ} \mathrm{C}\right)$ |  |
| SOT23 (derate 5.1mW/ ${ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) | 408.2 mW |
| $\mu \mathrm{MAX}$ (derate $4.8 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) | 387.8 mW |
| TSSOP (derate $10 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) | 796 mW |
| (derate $11.9 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ ) | 52 mW |

Operating Temperature Range ........................ $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$
Junction Temperature ..................................................... $150^{\circ} \mathrm{C}$
Storage Temperature Range........................... $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$
Lead Temperature (soldering, 10s) ................................ $+300^{\circ} \mathrm{C}$
Soldering Temperature (reflow) ...................................... $+260^{\circ} \mathrm{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## PACKAGE THERMAL CHARACTERISTICS (Note 1)

SOT23
Junction-to-Ambient Thermal Resistance ( $\theta_{\mathrm{JA}}$ ) ........ $196^{\circ} \mathrm{C} / \mathrm{W}$
Junction-to-Case Thermal Resistance ( $\theta_{\mathrm{JC}}$ ) ................ $70^{\circ} \mathrm{C} / \mathrm{W}$
$\mu \mathrm{MAX}$
Junction-to-Ambient Thermal Resistance ( $\theta_{\mathrm{JA}}$ ) ..... $206.3^{\circ} \mathrm{C} / \mathrm{W}$
Junction-to-Case Thermal Resistance ( $\theta_{\mathrm{JC}}$ ) ............... $42^{\circ} \mathrm{C} / \mathrm{W}$

## TSSOP

Junction-to-Ambient Thermal Resistance ( $\theta_{\mathrm{JA}}$ ) ..... $100.4^{\circ} \mathrm{C} / \mathrm{W}$ Junction-to-Case Thermal Resistance ( $\theta_{\mathrm{JC}}$ ) ............... $30^{\circ} \mathrm{C} / \mathrm{W}$ SO

Junction-to-Ambient Thermal Resistance ( $\theta_{\mathrm{JA}}$ ) .......... $84^{\circ} \mathrm{C} / \mathrm{W}$
Junction-to-Case Thermal Resistance ( $\theta_{\mathrm{JC}}$ ) ................ $34^{\circ} \mathrm{C} / \mathrm{W}$

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a fourlayer board. For detailed information on package thermal considerations, refer to www.maxim-ic.com/thermal-tutorial.

# MAX9092/MAX9093/MAX9094/MAX9095 General-Purpose, Low-Voltage, Dual/Quad, Tiny Pack Comparators 

## Detailed Description

The MAX9092/MAX9093/MAX9094/MAX9095 are lowcost, general-purpose comparators that have a singlesupply +1.8 V to +5 V operating voltage range. The common-mode input range extends from -0.1 V below the negative supply to within +0.8 V of the positive supply. They require approximately $65 \mu \mathrm{~A}$ per comparator with a 5 V supply and $50 \mu \mathrm{~A}$ with a 2.7 V supply.
The MAX9093/MAX9095 have 2 mV of hysteresis for noise immunity. This significantly reduces the chance of output oscillations even with slow moving input signals. The ICs are ideal for automotive applications because they operate from $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$. See the Typical Operating Characteristics.

## Applications Information

## Hysteresis

Many comparators oscillate in the linear region of operation because of noise or undesired parasitic feedback. This tends to occur when the voltage on one input is equal or very close to the voltage on the other input. The MAX9093/MAX9095 have internal hysteresis to counter parasitic effects and noise.
The hysteresis in a comparator creates two trip points: one for the rising input voltage and one for the falling input voltage (Figure 1). The difference between the trip points is the hysteresis. When the comparator's input voltages are equal, the hysteresis effectively causes one comparator input to move quickly past the other, thus taking the input out of the region where oscillation occurs. This provides clean output transitions for noisy, slow-moving input signals.

Figure 1. Threshold Hysteresis Band (Not to Scale)

Additional hysteresis can be generated with two resistors using positive feedback (Figure 2). Use the following procedure to calculate resistor values:

1) Find output voltage when output is high:

$$
V_{O U T}(H I G H)=V_{D D}-I_{L O A D} \times R_{L}
$$

2) Find the trip points of the comparator using these formulas:

$$
\begin{aligned}
& \mathrm{V}_{\mathrm{TH}}=\mathrm{V}_{\mathrm{REF}}+\left(\left(\mathrm{V}_{\mathrm{OUT}(\mathrm{HIGH})}-\mathrm{V}_{\mathrm{REF}}\right) \mathrm{R} 2\right) /(\mathrm{R} 1+\mathrm{R} 2) \\
& \mathrm{V}_{\mathrm{TL}}=\mathrm{V}_{\mathrm{REF}}(1-(\mathrm{R} 2 /(\mathrm{R} 1+\mathrm{R} 2)))
\end{aligned}
$$

where $\mathrm{V}_{\mathrm{TH}}$ is the threshold voltage at which the comparator switches its output from high to low as $\mathrm{V}_{\mathrm{IN}}$ rises above the trip point, and $\mathrm{V}_{\mathrm{TL}}$ is the threshold voltage at which the comparator switches its output from low to high as $\mathrm{V}_{\text {IN }}$ drops below the trip point.
3) The hysteresis band is:

$$
\mathrm{V}_{\mathrm{HYST}}=\mathrm{V}_{\mathrm{TH}}-\mathrm{V}_{\mathrm{TL}}=\mathrm{V}_{\mathrm{DD}}(\mathrm{R} 2 /(\mathrm{R} 1+\mathrm{R} 2))
$$

In this example, let $\mathrm{V}_{\mathrm{DD}}=5 \mathrm{~V}, \mathrm{~V}_{\mathrm{REF}}=2.5 \mathrm{~V}$, $\mathrm{l}_{\mathrm{LOAD}}=$ 50 nA , and $R_{L}=5.1 \mathrm{k} \Omega$.

$$
\begin{gathered}
\mathrm{V}_{\mathrm{OUT}(\mathrm{HIGH})}=5.0 \mathrm{~V}-\left(50 \times 10^{-9} \times 5.1 \times 10^{3} \Omega\right) \approx 5.0 \mathrm{~V} \\
\mathrm{~V}_{\mathrm{TH}}=2.5+2.5(\mathrm{R} 2 /(\mathrm{R} 1+\mathrm{R} 2)) \\
\mathrm{V}_{\mathrm{TL}}=2.5(1-(\mathrm{R} 2 /(\mathrm{R} 1+\mathrm{R} 2)))
\end{gathered}
$$

Select R2. In this example, choose $1 \mathrm{k} \Omega$.
Select $\mathrm{V}_{\text {HYST }}$. In this example, choose 50 mV .
Solve for R1.

$$
\begin{gathered}
V_{\text {HYST }}=V_{\text {OUT(HIGH) }}(R 2 /(R 1+R 2)) \mathrm{V} \\
0.050 \mathrm{~V}=5(1000 /(R 1+1000)) \mathrm{V}
\end{gathered}
$$

where $\mathrm{R} 1 \approx 100 \mathrm{k} \Omega, \mathrm{V}_{\mathrm{TH}}=2.525 \mathrm{~V}$, and $\mathrm{V}_{\mathrm{TL}}=2.475 \mathrm{~V}$

Figure 2. Adding Hysteresis with External Resistors

# MAX9092/MAX9093/MAX9094/MAX9095 General-Purpose, Low-Voltage, Dual/Quad, Tiny Pack Comparators 

Choose R1 and R2 to be large enough as not to exceed the amount of current the reference can supply.
The source current required is $V_{R E F} /(R 1+R 2)$.
The sink current is ( $\left.\mathrm{V}_{\mathrm{OUT}}(\mathrm{HIGH})-\mathrm{V}_{\mathrm{REF}}\right) \times(\mathrm{R} 1+\mathrm{R} 2)$.
Choose $R_{L}$ to be large enough to avoid drawing excess current, yet small enough to supply the necessary current to drive the load. $R_{L}$ should be between $1 \mathrm{k} \Omega$ and $10 k \Omega$. Choose R1 to be much larger than $R_{L}$ to avoid lowering $\mathrm{V}_{\text {OUT(HIGH) }}$ ir raising $\mathrm{V}_{\text {OUT(LOW) }}$.

## Board Layout and Bypassing

Use $0.1 \mu \mathrm{~F}$ bypass capacitors from $\mathrm{V}_{\mathrm{DD}}$ to $\mathrm{V}_{\text {SS }}$. To maximize performance, minimize stray inductance by putting this capacitor close to the $V_{D D}$ pin and reducing trace lengths. For slow-moving input signals (rise time > 1ms), use a 1 nF capacitor between $\mathrm{IN}+$ and IN - to reduce high frequency noise.

Chip Information
PROCESS: BiCMOS

Ordering Information

+Denotes a lead(Pb)-free/RoHS-compliant package.
*Future product-Contact factory for availability.
Package Information
For the latest package outline information and land patterns (footprints), go to www.maxim-ic.com/packages. Note that a "+", "\#", or "-" in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

| PACKAGE <br> TYPE | PACKAGE <br> CODE | OUTLINE <br> NO. | LAND <br> PATTERN NO. |
| :---: | :---: | :---: | :---: |

[^1]
[^0]:    - Guaranteed +1.8V to +5.5V Performance
    - $-40^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ Automotive Temperature Range
    - Low Supply Current ( $65 \mu \mathrm{~A} /$ Channel at VDD $=+5.0 \mathrm{~V}$ )
    - Input Common-Mode Voltage Range Includes Ground
    - No Phase Reversal for Overdriven Inputs
    - Low Output Saturation Voltage (120mV)
    - Internal 2mV Hysteresis (MAX9093/MAX9095)
    - Fast 100ns Propagation Delay
    - Open-Drain Outputs
    - 8-Pin SOT23/ $\mu$ MAX and 14-Pin TSSOP/SO Packages
