Note :  $C_{PD}$  is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption

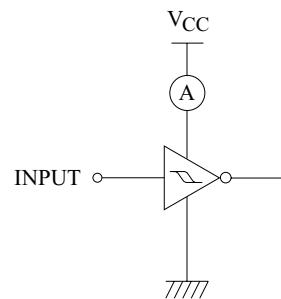

( $I_{CCD}$ ) at no output loading and operating at 50% duty cycle. (See Figure2.)  $C_{PD}$  is related to  $I_{CCD}$  dynamic operating current by the expression :  $I_{CC(\text{opr})} = C_{PD} \cdot V_{CC} \cdot f_{IN} + (I_{CC\text{static}})$
