Description

Third Generation HEXFETs from International Rectifier provide the designer with the best combinations of fast switching , ruggedized device design, low on-resistance and cost-effectiveness.

The D^2Pak is a surface mount power package capable of accommodating die sizes up to HEX-4. It provides the highest power capability and the lowest possible on-resistance in any existing surface mount package. The D^2Pak is suitable for high current applications because of its low internal connection resistance and can dissipate up to 2.0W in a typical surface mount application.The through-hole version (IRF640L) is available for low-profile applications.
