RAA207703GBM/7704GBM/7705GBM

Synchronous Buck Regulator with Internal Power MOSFETs

R07DS0892EJ0001
Rev.0.01
Nov 29, 2012

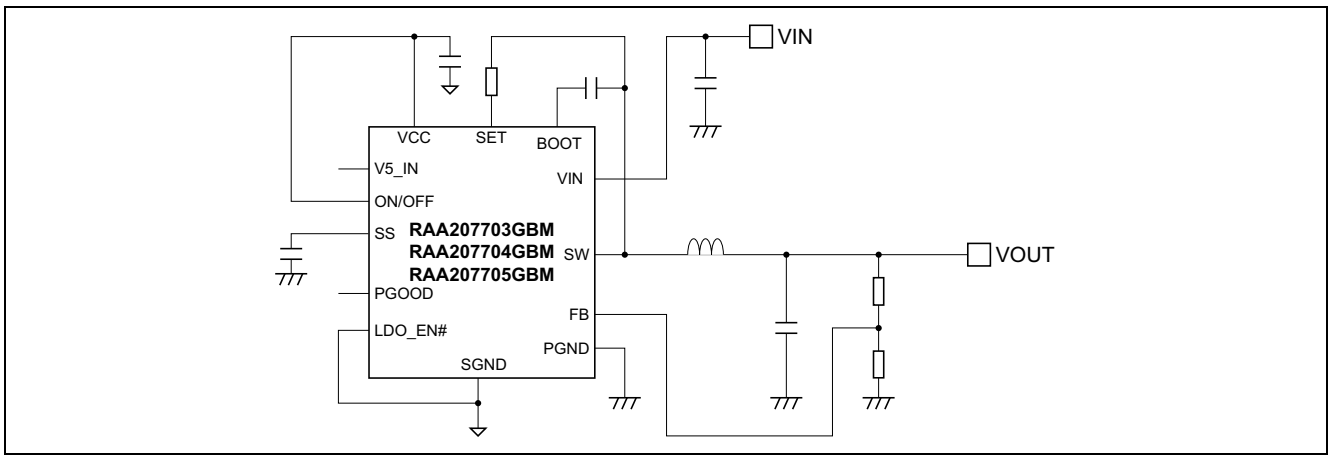
Description

The RAA207703GBM is monolithic synchronous buck regulator with power MOSFETs in extremely small package. The RAA207703GBM delivers high output current by small Rds(on) Power MOSFETs. Constant on time control architecture provides fast transient response, and minimize external components. The RAA207703GBM operates skip mode at light load, it provides high efficiency in all load condition. The RAA207703GBM incorporates internal 5V LDO, so the regulator can operates single power supply. Three current ability products can be selected.

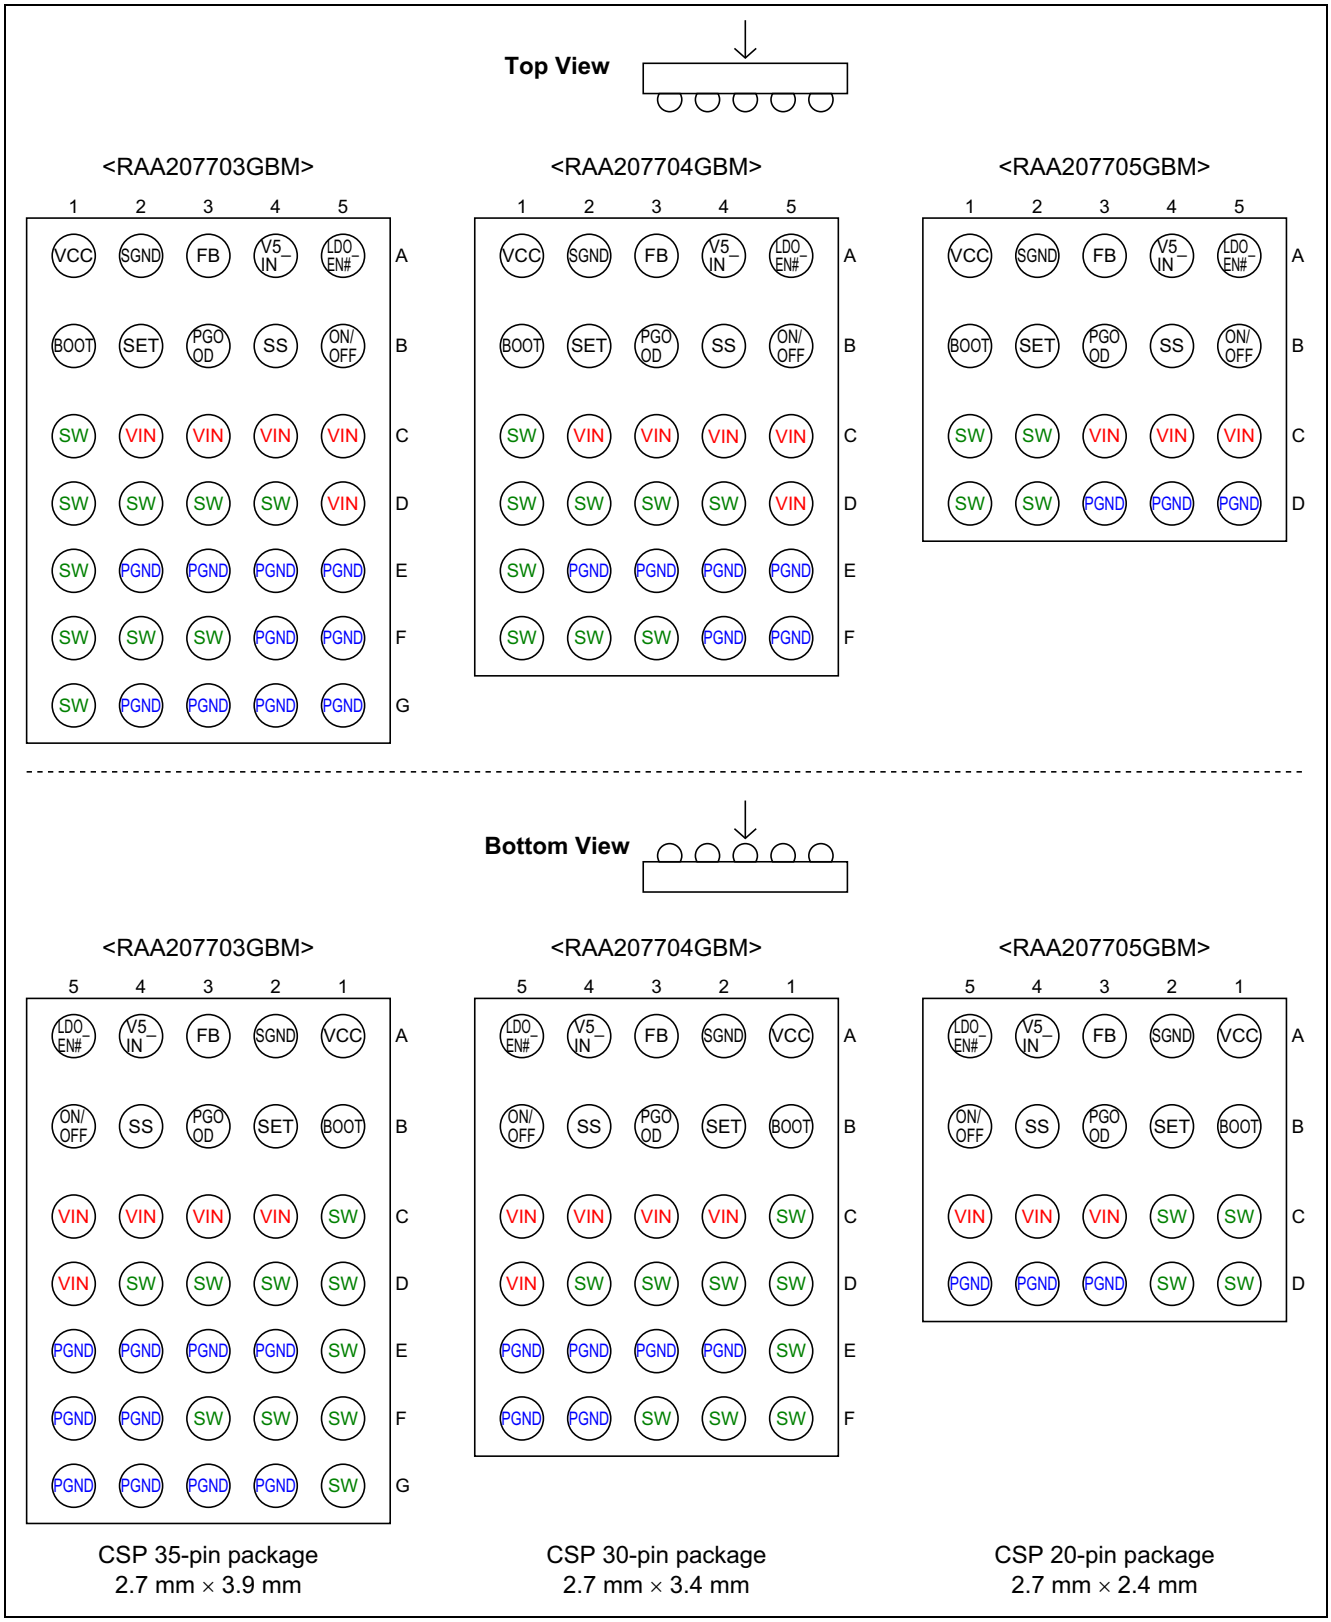
Features

- Input voltage range: 5.5 V to 16 V
- Constant-On-Time control
- Built-in power MOSFETs suitable for PC, Server application
- Internal 5 V LDO for single power supply operation
- 5 V LDO / external 5 V input selectable (LDO remote ON/OFF)
- Switching frequency: Adjustable up to 2 MHz
- High average output current, up to 15 A (7703GBM), 10 A (7704GBM), 5 A (7705GBM)
- Controllable driver: Remote on/off
- Power Good function
- Over current protection/Over voltage protection/Thermal shutdown function
- Built-in bootstrapping diode
- Soft Start period adjustable
- Enhanced light load mode function for higher efficiency
- Extremely small chip size package with solder bump
- Pb-Free/Halogen-Free

Application Circuit



Pin Arrangement



CSP 35-pin package
2.7 mm × 3.9 mm

CSP 30-pin package
2.7 mm × 3.4 mm

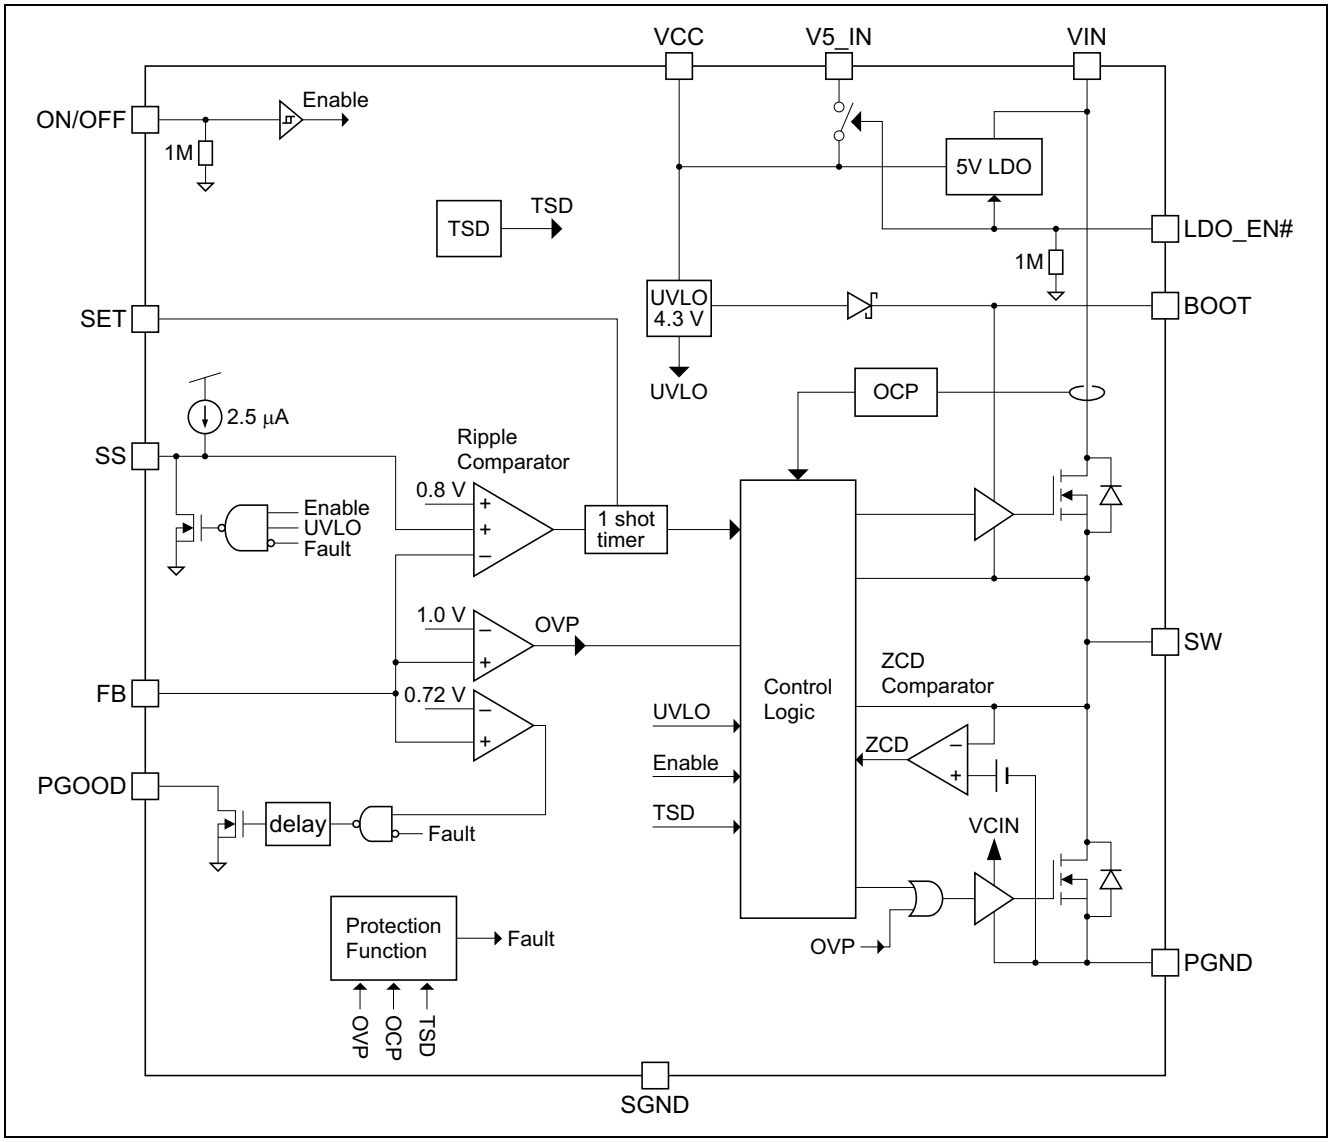
CSP 20-pin package
2.7 mm × 2.4 mm

Pin Description

Pin Name	Pin No.	Description	Remarks
VCC	1A	Controller voltage	Controller supply input (5 V regulator output)
SGND	2A	Controller analog GND	Should be connected to PGND on PCB pattern
FB	3A	Feedback voltage input pin	
V5_IN	4A	5 V external input	
LDO_EN#	5A	Internal 5 V LDO enable pin	
BOOT	1B	Bootstrap voltage pin	To be supplied +5 V through integrated SBD
SET	2B	Constant on time program pin	Tie resistor between SW and SET
PGOOD	3B	Power good indicator pin	Pull low when No Good (open drain output)
SS	4B	Soft start period program pin	Tie capacitor between SS and SGND
ON/OFF	5B	Operation enable pin	Operation stop when L signal asserted
VIN	—	Input voltage	
SW	—	Switching node	
PGND	—	Power ground	Should be connected to SGND on PCB pattern

Note: Pin assign of 1A-5A & 1B-5B is common through RAA207703GBM, RAA207704GBM and RAA207705GBM.

Block Diagram



1. Truth table for the ON/OFF pin

ON/OFF Input	Driver Chip Status
"L"	Shutdown (operation STOP)
"Open"	Shutdown (operation STOP)
"H"	Enable (Normal operation)

2. Truth table for LDO_EN# pin

LDO_EN# Input	5 V Regulator Status
"L"	LDO enable
"Open"	LDO enable
"H"	LDO disable

Absolute Maximum Ratings

(Ta = 25°C)

Item	Symbol	Ratings	Unit	Notes
Input voltage	VIN	–0.3 to +20	V	1
Switch node voltage	SW	20(DC), 23(<10 ns)	V	1
BOOT voltage	VBOOT	25(DC), 28(<10 ns)	V	1, 2
Controller voltage	VCC	–0.3 to +6	V	1
VCC current	ICC	–20 to +0.1	mA	3
V5_IN voltage	V5_IN	–0.3 to +6	V	1
FB pin voltage	V_{FB}	–0.3 to VCC +0.3	V	1, 4
ON/OFF voltage	$V_{ON/OFF}$	–0.3 to VIN	V	1
LDO_EN# voltage	$V_{LDO\_EN\#}$	–0.3 to VIN	V	1
SET voltage	V_{SET}	–0.3 to VIN	V	1
PGOOD voltage	V_{PGOOD}	–0.3 to VIN	V	1
PGOOD sink current	I_{PGOOD}	+2	mA	3
Operating junction temperature	Tj-opr	–40 to +125	°C	
Storage temperature	Tstg	–55 to +150	°C	

Notes: 1. Rated voltages are relative to voltages on the SGND and PGND pins.
2. BOOT – VCIN < 20 V
3. For rated current, (+) indicates inflow to the chip and (–) indicates outflow.
4. VCC + 0.3 V < 6 V

Recommended Operating Condition

Item	Symbol	Ratings	Unit	Remarks
Input voltage	VIN	5.5 to 16	V	When 5 V LDO use
Controller voltage	VCC	4.5 to 5.5	V	Controller voltage is supplied externally
Continuous output current	IOUT	0 to 15 0 to 10 0 to 5	A	15 A: RAA207703GBM 10 A: RAA207704GBM 5 A: RAA207705GBM

Electrical Characteristics

(Ta = 25°C, VIN = 12 V, unless otherwise specified)

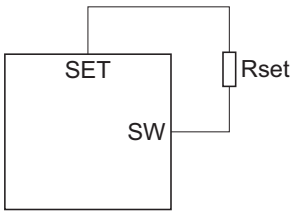
Item		Symbol	Min	Typ	Max	Unit	Test Conditions
Supply	VIN start threshold	VH	—	4.3	4.6	V	
	VIN shutdown threshold in CCM	VL	3.6	3.8	—	V	
	VIN shutdown threshold in ELL mode	V_{LCCM}	—	3.0	3.6	V	In ELL mode (DCM, f_{SW} < 100 kHz)
	VIN quiescent current	Iq	—	400	500	µA	Output = no load, ELL mode
	VIN disable current (LDO_EN# = 12 V)	$I_{IN-DISBL1}$	—	70	150	µA	ON/OFF = 0 V, LDO_EN# = 12 V
	VIN disable current (LDO_EN# = 0 V)	$I_{IN-DISBL2}$	—	130	200	µA	ON/OFF = 0 V, LDO_EN# = 0 V
Remote on/off	Disable level	V_{DISBL}	—	—	0.6	V	3.3 / 5.0 V interface
	Enable level	V_{ENBL}	2.0	—	—	V	
	Pull-down resistance	R_{DISBL}	0.7	1	1.3	MΩ	ON/OFF = 1 V
5 V LDO enable	5 V LDO on level	V_{LDO_ON}	—	—	0.6	V	
	5 V LDO off level	V_{LDO_OFF}	2.0	—	—	V	
	Pull-down resistance	R_{LS_IN}	0.7	1	1.3	MΩ	LDO_EN# = 1 V
5 V LDO output	5 V LDO output voltage	V_{LDO}	4.5	5.0	5.5	V	VIN = 12 V
FB	Comparator threshold voltage	V_{FB_COMP}	792	800	808	mV	
	FB input current	I_{FB_IN}	–0.1	0	+0.1	µA	FB = 1 V
Power good indicator	Rising threshold on FB	V_{PG_rise}	0.67	0.72	0.77	V	
	Power good hysteresis	dV_{PG}	—	50	—	mV	
	Power good resistance	R_{PG}	0.25	0.5	1	kΩ	FB = 0 V
Soft start	Soft start bias current	I_{SS}	1.8	2.5	3.2	µA	
Over voltage protection	OVP trip voltage on FB	V_{OVP}	0.95	1.00	1.05	V	
Over current protection	OCP trip current (RAA207703GBM)	I_{OCP}	16.0	20.0	24.0	A	Fixed internally *[1]
	OCP trip current (RAA207704GBM)	I_{OCP}	12.0	15.0	18.0	A	Fixed internally *[1]
	OCP trip current (RAA207705GBM)	I_{OCP}	6.4	8.0	9.6	A	Fixed internally *[1]
Over temperature protection	TSD trip temperature	T_{TSD}	130	150	—	°C	*[1]
	Temperature hysteresis	T_{hys}	—	30	—	°C	*[1]

Note: *1 Not directly tested. Assured by related characteristics test.

Description of Operation

The RAA207703GBM operates as voltage-ripple based constant on time control architecture. Converter output is controlled by output voltage ripple which is determined by inductor ripple current and ESR & ESL of output capacitor. Each switching cycle starts High-side MOSFET turn on which time is decided by 1 shot timer. After High-side MOSFET turns off, Low side turns on, and it keeps until FB voltage becomes lower than reference voltage. In light load condition, Low-side MOSFET on time is decided by inductor zero current.

Switching Frequency, Constant on Time Setting



Switching Frequency in CCM mode is determined by following equation.

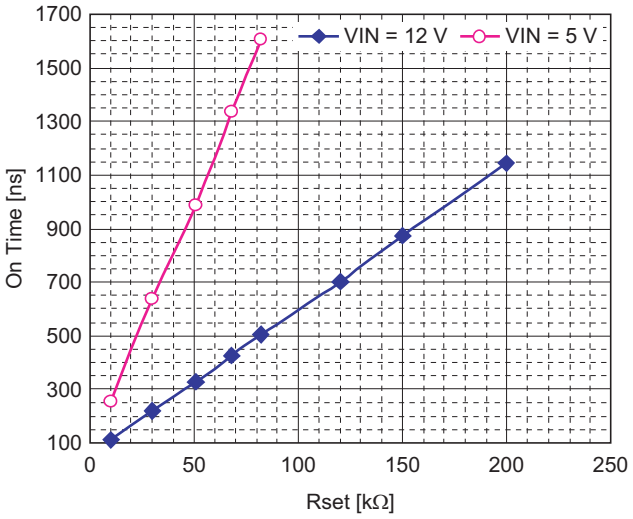
Switching Frequency: (Vo/Vin) • (1/ton) [Hz]

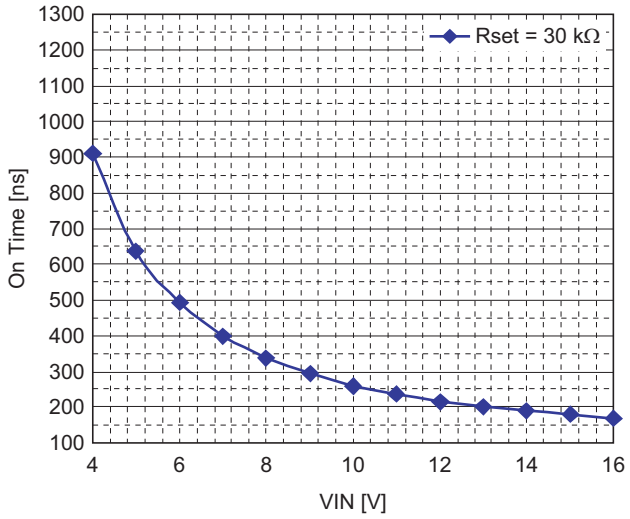
Here, ton is High-side MOS on time, and it is determined by following equation.

On time pulse: (5 pF / Vin – 2.0 V) • Rset + 50 ns [s]

From above equation, constant on time is change depend on Vin, so switching frequency is almost constant when VIN change. This architecture is suitable for battery application. From the above equation, Rset is calculated by

Rset: (Vout / (Vin • Fsw) – 50 ns) • (Vin – 2.0 V) / (50 pF • 1 V) [Ω]



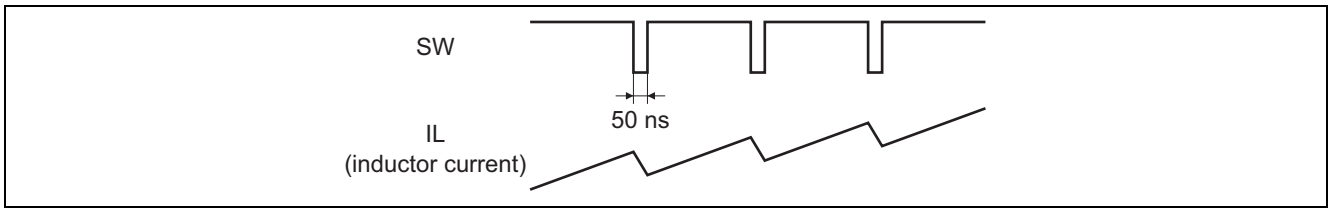


Maximum Duty Cycle Operation

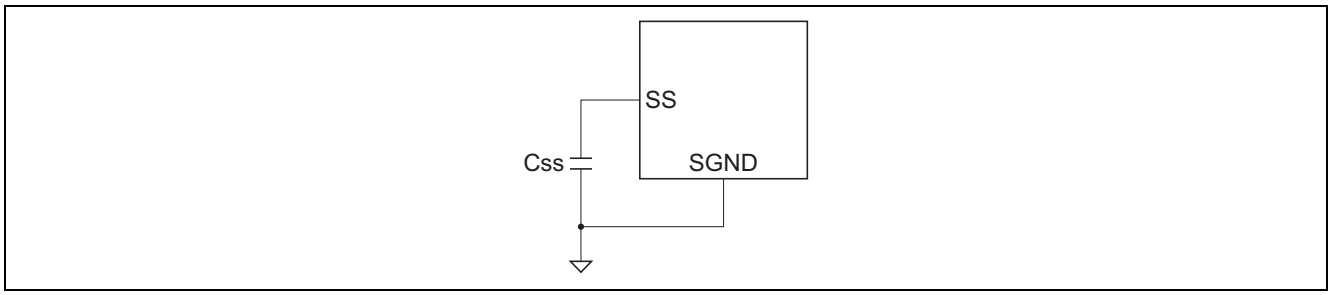
Maximum duty cycle is restricted by following equation.

Max. duty: 1 – (50 ns • Fsw)

Here, Fsw is switching frequency.
If FB voltage does not reach reference voltage after the High-side MOSFET turn on time is expired, Low-side MOSFET turns on 50 ns, and next switching cycle starts. Especially, this condition occurs when output load transient state.



Soft Start



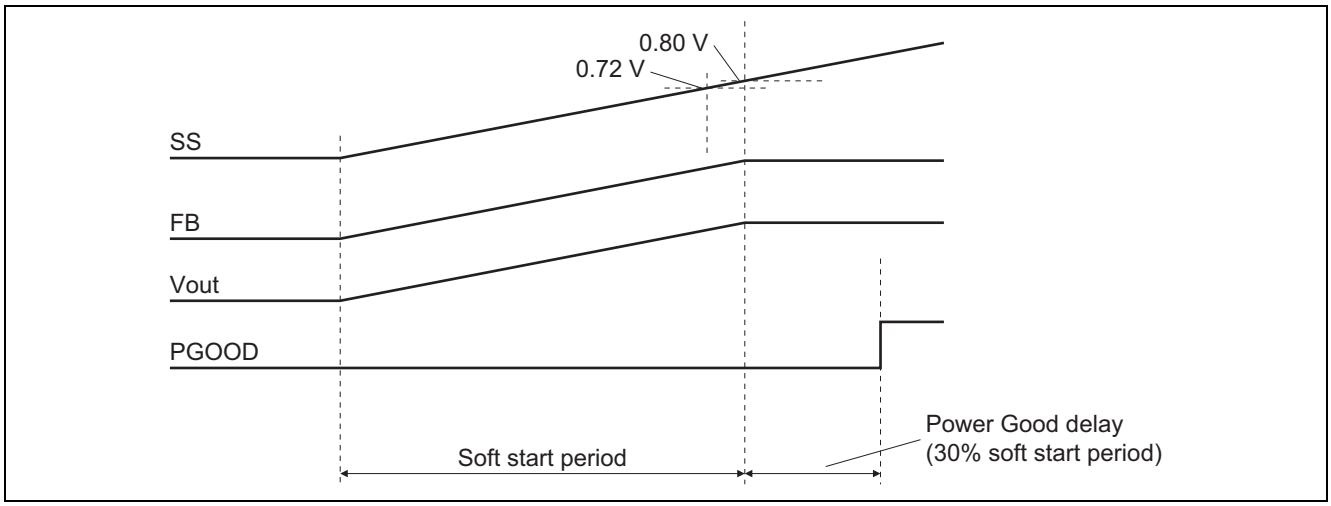
Soft start ramp period is adjustable by external capacitor (Css) selection. When converter start operating, 2 μA current from SS pin charges capacitor between SS and GND. Soft start period is determined by following equation.

Soft Start period: Css • 0.8 V / 2.5 μA [s]

Here, 0.8 V is internal reference voltage Vref. IC operates diode emulation mode at Soft start period, so it can prevent from reverse current when pre-bias condition. Soft start restarts when Enable signal re-entered, and after OCP, OVP, TSD, UVL release condition.

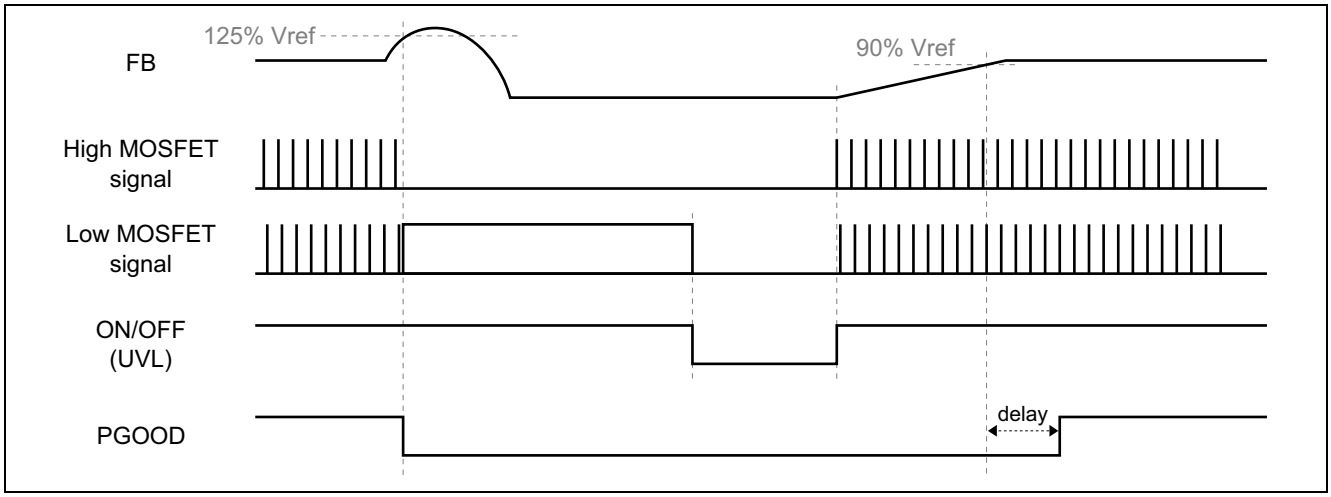
Power Good Indicator

Power good indicator is useful for controlling multi-converter systems for sequential start up and shut down. FB voltage ismonitored continuously by power good comparator. The power good comparator compares FB pin and 90% internal referencevoltage (0.72 V). When FB reaches reference voltage, PGOOD pin becomes high impedance after internal delay (30% of soft start period). Under the fault condition (UVLO, OVP, OCP, TSD), PGOOD pin is pulled low.



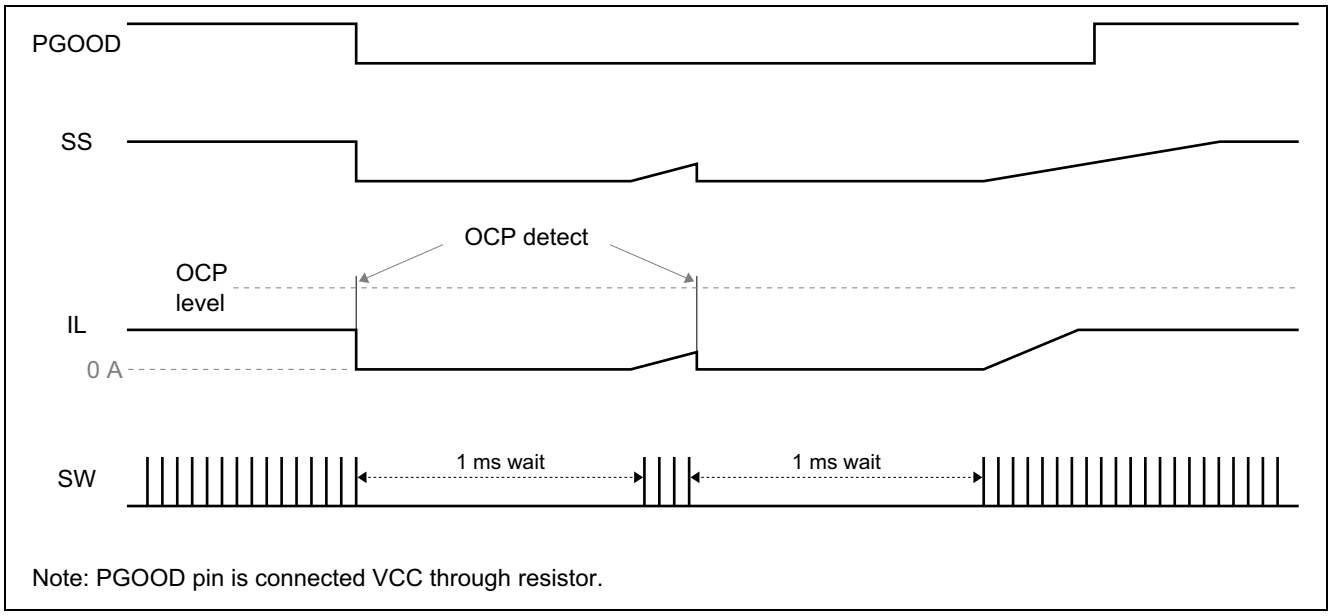
Over Voltage Protection (OVP)

When FB voltage exceeds 125% of reference voltage (1.00 V), switching stops immediately and latched Low-side MOSFET on state in order to pull the output voltage. To leave the OVP condition, VCIN needs to be pulled under the UVLO level, and re-enter the signal.



Over Current Protection (OCP)

OCP detection circuit monitors high-side MOSFET drain-source current. When the current exceeds fixed level eight time, IC starts hiccup operation. In the hiccup operation, switching stops and operate 1 ms timer. After 1 ms timer is expired, IC operates again from soft start state. If IC detect OCP in the soft start circuit, hiccup operation start again.



Note: PGOOD pin is connected VCC through resistor.

Thermal Shutdown (TSD)

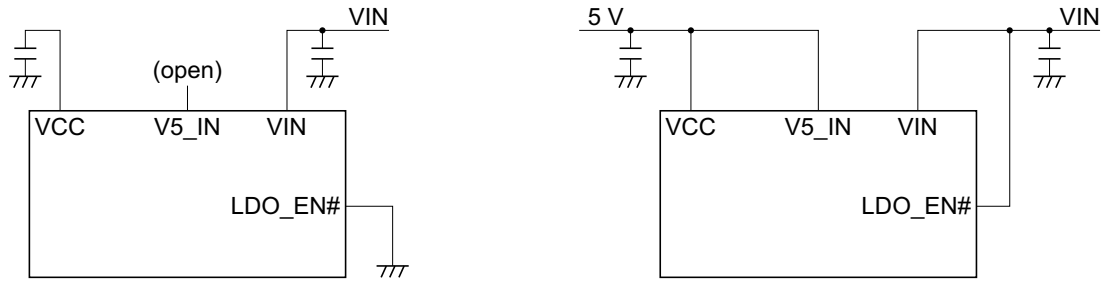
Thermal sensor monitors junction temperature of IC. When junction temperature exceeds 150°C, switching stops. After junction temperature become 125°C, IC restart switching from soft start (Non-latched function).

Enhanced Light Load Function (ELL)

IC operates diode emulation mode in light load condition. To enhance light load efficiency, IC detects light load condition automatically, and operate as Enhanced Light Load mode (ELL). In ELL mode, bias current of IC becomes small, so this function can improve the efficiency.

Controller Power Supply

The RAA207703GBM incorporates internal 5 V LDO, so it can operate with single power supply. LDO_EN# can control LDO operation, and select the controller power supply from LDO or V5_IN pin. When LDO_EN# = H state, external 5 V should be applied to V5_IN pin.
Typical pin connection of each operation are below.

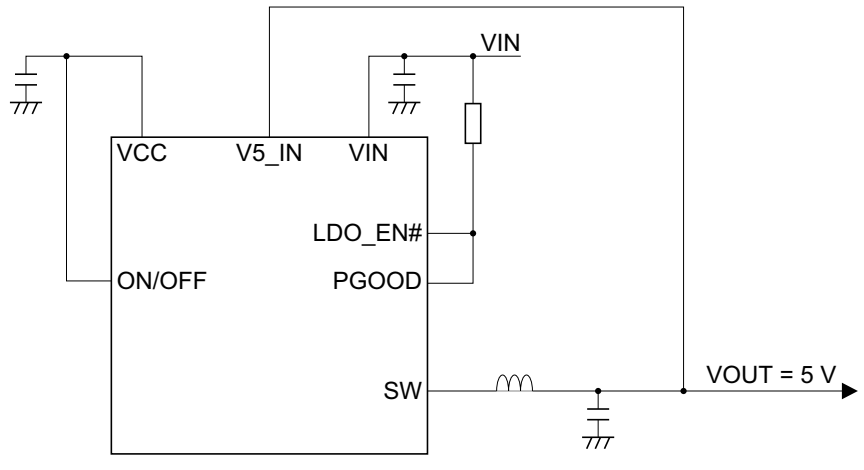


Operation with single power supply

Operation with multi power supply

LDO Loss Reduce Circuit (only for Vout = 5 V)

When regulator output is 5 V, IC can operate with their output voltage in order to reduce LDO loss. In this time, PGOOD signal can be used for LDO or 5V_IN select signal. Pin connection is below.

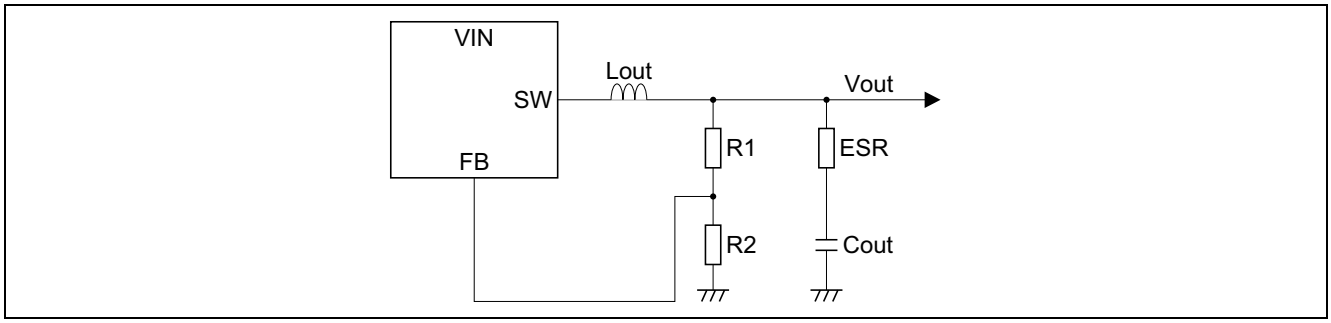


Operation with 5 V output voltage

Initially, controller voltage is supplied from VIN through internal LDO. Switching regulator starts from soft-start and power good output becomes hi-impedance when output 5 V becomes stable. After LDO_EN# detects Hi level, LDO stops and controller operates their own 5 V output voltage.

Stability Criteria, Output Voltage Setting for High ESR Output Capacitor

Small output ripple voltage makes control loop unstable in constant on time architecture. Ripple voltage needs to be larger than 15 mV on FB pin. When using high ESR (>50 mΩ) capacitor such as Electrolytic capacitor, Polymer aluminum capacitor for output capacitor, ripple voltage on FB pin will be more than 15 mV.



Stability criteria

From loop stability analysis, constant on time control system must satisfy below equation.

Stability criteria: ESR • Cout > ton / 2

Here, ton is constant on time. If the system cannot satisfy above equation, subharmonic oscillation will occur.

Vout setting

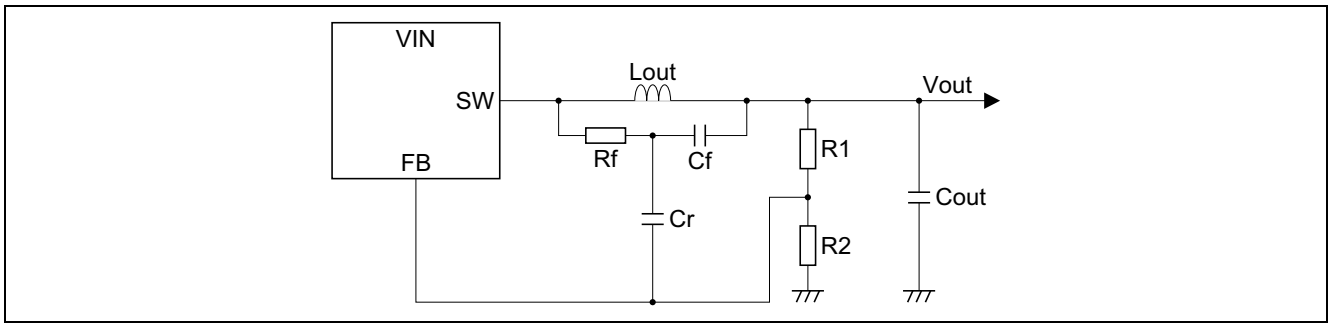
FB comparator compares FB voltage and internal accurate reference voltage (0.8 V). Feedback loop controls FB voltage to match the reference voltage. Therefore, output voltage is set by following equation.

Vout: 0.8 V • (R1+R2) / R2

Here, R1 and R2 is output voltage divider resister (refer to above figure). However, ripple voltage on FB pin affects FB voltage, so Vout slightly shifts from setting value. If the system needs high accuracy, adjust Vout by changing R1, R2 value.

Operating with Small ESR Output Capacitor

When using low-ESR output capacitor like MLCC, voltage ripple on output voltage node is very small. So voltage ripple needs to be enhanced by additional components. Recommended ripple enhance method is like below figure.



Ripple injection on FB pin

Rf and Cf make ripple voltage using inductor DCR ripple. Cr is used for AC ripple injection to FB pin. Ripple voltage between Rf and Cf is described by following equation.

$$Vripple: (VIN - VOUT) \bullet ton / (Rf \bullet Cf)$$

Make sure above ripple voltage is larger than 15 mV.

Stability criteria

From loop stability analysis of above circuit configuration, the system must satisfy below equation.

$$Stability\ criteria: Lout \bullet Cout / (Rf \bullet Cf) > ton / 2$$

If the system cannot satisfy above equation, subharmonic oscillation will occur.

Vout setting

Output voltage setting is basically same concept as high ESR capacitor use case. Ripple voltage from injection circuit affects FB voltage, so it need to be adjust R1, R2 for high accuracy system.

Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
3. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.
   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; and safety equipment etc.
   Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.
6. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document, Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.
11. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
