0.5mm APERTURE OPTO-ELECTRONIC SINGLE CHANNEL WIDE GAP SLOTTED INTERRUPTER SWITCHES WITH TRANSISTOR SENSORS
DESCRIPTION

The ISTS802 series of opaque photointerrupters are single channel switches consisting of a Gallium Arsenide infrared emitting diode and a NPN silicon photo transistor mounted in a polycarbonate housing. The package is designed to optimise the mechanical resolution, coupling efficiency, ambient light rejection, cost and reliability. Operating on the principle that objects opaque to infrared will interrupt the transmission of light between an infrared emitting diode and a photo sensor switching the output from an "ON" state to an "OFF" state.

FEATURES

- High Sensing Accuracy Aperture - 0.5mm
- 5mm Gap between LED and Detector
- Also available with flying leads, with or without connector, supplied as required

APPLICATIONS

- Copiers, Printers, Facsimilies, Record Players, Cassette Decks, Optoelectronic Switches, VCR's
