## A. General Description

The PHISON's PS2251-33 micro-controller supports USB 2.0 & 1.1 and interface to NAND Flash Memory. This chip is specially designed for portable storage device or build-in to the PC / Notebook / IA system. It is pin-to-pin compatible to previous controllers. (eg : PS2136 & PS2231 & PS2232.....etc)

PS2251-33 controller implements with PRAM (program RAM) architecture, which can upgrade firmware code anytime if required. This is very helpful for time-to-market & Mass Production solution.

By using this single chip solution, it will reduce a lot of efforts which was needed from R/D to production, as well as simplifying the RMA problems. With the USB plug & play function and driver-less solution with most of the operating systems, this solution provides not only easy to install, but also fast, easy to use and low cost way for user.
