

O.M.N.I. Category 5 Connector

Category 5 O.M.N.I. connector

The O.M.N.I. Category 5 connector retains the same external dimensions as all existing products but now meets the TIA 568A Category 5 requirements. The connector still fits in all information outlets and panels that take the standard O.M.N.I. connector.

Simple hand tools are still all that are required to terminate the connector to Category 5 UTP. There is no difference in the termination method. No special terminating, stripping, or punching tools are required.

The O.M.N.I. connector allows the installer to wire either 568A or 568B wiring schemes. The connector consists of a jack body and a clear dressing block. A label on the dressing block shows the wiring schemes.

12

Features and Benefits

- TIA 568A Category 5 compliant
- Combed contacts, help prevent shorting
- Only simple hand tools required for termination
- Connectors available in red, white, black, blue and ivory and various TIA 606 colors.
- Built in cable strain relief
- Clear dressing block for easy wiring verification
- Label in dressing block allows for easy wiring of 568A or 568B
