### **IR Receiver Modules for Remote Control Systems**

#### **MECHANICAL DATA**

#### **Pinning**

 $1 = GND, 2 = N.C., 3 = V_S, 4 = OUT$ 

#### **DESCRIPTION**

The TSOP61.., TSOP63.. series are miniaturized SMD-IR receivers for infrared remote control systems. A PIN diode and a preamplifier are assembled on a lead frame, the epoxy package acts as an IR filter.

The demodulated output signal can directly be decoded by a microprocessor. The main benefit of the TSOP61.. is the compatibility to all IR remote control data formats. The TSOP63.. is optimized to better suppress spurious pulses from fluorescent lamps, LCD TVs or plasma displays.

This component has not been qualified according to automotive specifications.

#### **FEATURES**

- Photo detector and preamplifier in one package
- Internal filter for PCM frequency
- · Continuous data transmission possible
- Supply voltage: 2.7 V to 5.5 V
- · Output active low
- Low power consumption
- Material categorization: For definitions of compliance please see www.vishay.com/doc?99912

# Pb-free

RoHS

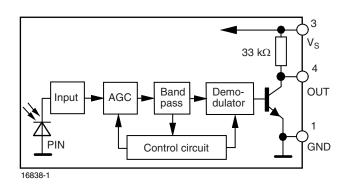

### GREEN (5-2008)

#### SPECIAL FEATURES

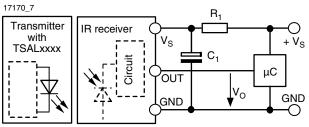

- Operation with short burst possible (≥ 6 cycles/burst)
- Taping available for topview and sideview assembly
- Enhanced data rate up to 4000 bit/s (TSOP61..)
- Enhanced suppression of noise from fluorescent lamps, LCD TVs or plasma TVs (TSOP63..)

#### APPLICATION CIRCUIT

The external components  $R_1$  and  $C_1$  are optional to improve the robustness against electrical overstress (typical values are  $R_1$  = 100  $\Omega$ ,  $C_1$  = 0.1  $\mu$ F).

The output voltage  $V_{\rm O}$  should not be pulled down to a level below 1 V by the external circuit.

The capacitive load at the output should be less than 2 nF.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only
and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification
is not implied. Exposure to absolute maximum rating conditions for extended periods may affect the device reliability.

#### **SUITABLE DATA FORMAT**

The TSOP61.., TSOP63.. series are designed to suppress spurious output pulses due to noise or disturbance signals. Data and disturbance signals can be distinguished by the devices according to carrier frequency, burst length and envelope duty cycle. The data signal should be close to the band-pass center frequency (e.g. 38 kHz) and fulfill the conditions in the table below.

When a data signal is applied to the TSOP61.., TSOP63.. in the presence of a disturbance signal, the sensitivity of the receiver is reduced to insure that no spurious pulses are present at the output. Some examples of disturbance signals which are suppressed are:

- DC light (e.g. from tungsten bulb or sunlight)
- · Continuous signals at any frequency
- Modulated IR signals from common fluorescent lamps (example of noise pattern is shown in fig. 14 or fig. 15)

Minimum burst length	6 cycles/burst	6 cycles/burst
After each burst of length a minimum gap time is required of	6 to 70 cycles ≥ 10 cycles	6 to 35 cycles ≥ 10 cycles
For bursts greater than a minimum gap time in the data stream is needed of	70 cycles > 1.1 x burst length	35 cycles > 6 x burst length

Recommended for XMP code	yes	yes
Suppression of interference from fluorescent lamps	Common disturbance signals are supressed (e.g. waveform of figure 14)	Even critical disturbance signals are suppressed (e.g. waveform of figure 15)

#### Note

 For data formats with long bursts (10 carrier cycles or longer) we recommend the TSOP62.., TSOP 64.. because of the better noise suppression.

#### **ASSEMBLY INSTRUCTIONS**

#### **Reflow Soldering**

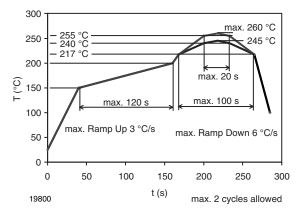

- Reflow soldering must be done within 72 h while stored under a max. temperature of 30 °C, 60 % RH after opening the dry pack envelope
- Set the furnace temperatures for pre-heating and heating in accordance with the reflow temperature profile as shown in the diagram. Excercise extreme care to keep the maximum temperature below 260 °C. The temperature shown in the profile means the temperature at the device surface. Since there is a temperature difference between the component and the circuit board, it should be verified that the temperature of the device is accurately being measured
- Handling after reflow should be done only after the work surface has been cooled off

#### **Manual Soldering**

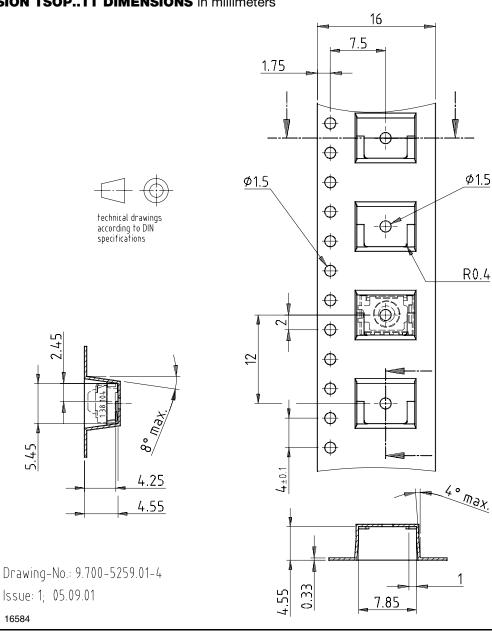

- Use a soldering iron of 25 W or less. Adjust the temperature of the soldering iron below 300 °C
- Finish soldering within 3 s
- · Handle products only after the temperature has cooled off

### Standard bar code labels for finished goods

The standard bar code labels are product labels and used for identification of goods. The finished goods are packed in final packing area. The standard packing units are labeled with standard bar code labels before transported as finished goods to warehouses. The labels are on each packing unit and contain Vishay Semiconductor GmbH specific data.

#### **DRY PACKING**

The reel is packed in an anti-humidity bag to protect the devices from absorbing moisture during transportation and storage.

#### **FINAL PACKING**

The sealed reel is packed into a cardboard box. A secondary cardboard box is used for shipping purposes.

#### RECOMMENDED METHOD OF STORAGE

Dry box storage is recommended as soon as the aluminum bag has been opened to prevent moisture absorption. The following conditions should be observed, if dry boxes are not available:

- Storage temperature 10 °C to 30 °C
- Storage humidity ≤ 60 % RH max.

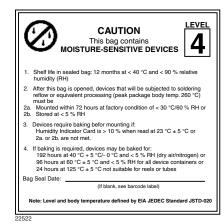

After more than 72 h under these conditions moisture content will be too high for reflow soldering.

In case of moisture absorption, the devices will recover to the former condition by drying under the following condition: 192 h at 40 °C + 5 °C/ - 0 °C and < 5 % RH (dry air/nitrogen)

96 h at 60 °C + 5 °C and < 5 % RH for all device containers or

24 h at 125 °C + 5 °C not suitable for reel or tubes.

An EIA JEDEC standard JSTD-020 level 4 label is included on all dry bags.

EIA JEDEC standard JSTD-020 level 4 label is included on all dry bags

#### **ESD PRECAUTION**

Proper storage and handling procedures should be followed to prevent ESD damage to the devices especially when they are removed from the antistatic shielding bag. Electro-static sensitive devices warning labels are on the packaging.

## VISHAY SEMICONDUCTORS STANDARD BAR CODE LABELS

The Vishay Semiconductors standard bar code labels are printed at final packing areas. The labels are on each packing unit and contain Vishay Semiconductors specific data.
