## Data Sheet

## Description

The Versatile Link series is a complete family of fiber optic link components for applications requiring a low cost solution. The HFBR-0500ETZ series includes transmitters, receivers, connectors and cable specified for easy design. This series of components is ideal for solving problems with voltage isolation/insulation, EMI/RFI immunity or data security. The optical link design is simplified by the logic compatible receivers and complete specifi-cations for each component. The key optical and electrical parameters of links configured with the HFBR-0500ETZ family are fully guaranteed from $-40^{\circ}$ to $85^{\circ} \mathrm{C}$.

A wide variety of package configurations and connectors provide the designer with numerous mechanical solutions to meet application requirements. The transmitter and receiver components have been designed for use in high volume/low cost assembly processes such as auto insertion and wave soldering.

Transmitters incorporate a 660 nm LED. Receivers include a monolithic dc coupled, digital IC receiver with open collector Schottky output transistor. An internal pullup resistor is available for use in the HFBR-25X1ETZ and HFBR-25X2ETZ receivers. A shield has been integrated into the receiver IC to provide additional, localized noise immunity.

Internal optics have been optimized for use with 1 mm diameter plastic optical fiber. Versatile Link specifications incorporate all connector interface losses. Therefore, optical calculations for common link applications are simplified.

## Features

- Extended temperature range -40 to $+85^{\circ} \mathrm{C}$
- RoHS-compliant
- Low cost fiber optic components
- Enhanced digital links: dc-5 MBd
- Link distance up to 43 m at 1 MBd and 20 m at 5 MBd
- Low current link: 6 mA peak supply current
- Horizontal and vertical mounting
- Interlocking feature
- High noise immunity
- Easy connectoring: simplex, duplex, and latching connectors
- Flame retardant
- Transmitters incorporate a 660 nm red LED for easy visibility
- Compatible with standard TTL circuitry

## Applications

- Industrial Drives/Frequency Inverters
- Renewable Energies (Wind Turbines, Solar PV farms) Power electronics
- Reduction of lightning/voltage transient susceptibility
- Motor controller triggering
- Data communications and local area networks
- Electromagnetic Compatibility (EMC) for regulated systems: FCC, VDE, CSA, etc.
- Tempest-secure data processing equipment
- Isolation in test and measurement instruments
- Error free signalling for industrial and manufacturing equipment
- Automotive communications and control networks
- Noise immune communication in audio and video equipment

## HFBR-0500ETZ Series Part Number Guide

Available option - Horizontal Package
HFBR-x521ETZ HFBR-x522ETZ

Available option - Vertical Package
HFBR-x531ETZ HFBR-x532ETZ

Available option - $30^{\circ}$ Tilted Package
HFBR-x541ETZ HFBR-x542ETZ

## Link Selection Guide

(Links specified from $-40^{\circ}$ to $85^{\circ} \mathrm{C}$, for plastic optical fiber unless specified.)

| Signal Rate | Distance $\left(\mathbf{m} \mathbf{)} \mathbf{2 5 ^ { \circ }} \mathbf{C}\right.$ | Distance $(\mathbf{m})$ | Transmitter | Receiver |
| :--- | :--- | :--- | :--- | :--- |
| 1 MBd | 67 | 43 | HFBR-15×2ETZ | HFBR-25×2ETZ |
| 5 Mbd | 38 | 20 | HFBR-15x1ETZ | HFBR-25x1ETZ |

## Application Literature

## Application Note 1035 (Versatile Link)

## Package and Handling Information

The compact Versatile Link package is made of a flame retardant VALOX ${ }^{\ominus}$ UL 94 V-0 material (UL file \# E121562) and uses the same pad layout as a standard, eight pin dual-in-line package. Vertical and horizontal mountable parts are available. These low profile Versatile Link packages are stackable and are enclosed to provide a dust resistant seal. Snap action simplex, simplex latching, duplex, and duplex latching connectors are offered with simplex or duplex cables.

## Package Orientation

Performance and pinouts for the vertical and horizontal packages are identical. To provide additional attachment support for the vertical Versatile Link housing, the designer has the option of using a selftapping screw through a printed circuit board into a mounting hole at the bottom of the package. For most applications this is not necessary.

## Package Housing Color

Versatile Link components and simplex connectors are color coded to eliminate confusion when making connections. Receivers are blue and transmitters are gray.

## Handling

Versatile Link components are auto-insertable. When wave soldering is performed with Versatile Link components, the optical port plug should be left in to prevent contamination of the port. Do not use reflow solder processes (i.e., infrared reflow or vapor-phase reflow). Nonhalogenated water soluble fluxes (i.e., 0\% chloride), not rosin based fluxes, are recommended for use with Versatile Link components.

Versatile Link components are moisture sensitive devices and are shipped in a moisture sealed bag. If the components are exposed to air for an extended period of time, they may require a baking step before the soldering process. Refer to the special labeling on the shipping tube for details.

## Recommended Chemicals for Cleaning/Degreasing

Alcohols: methyl, isopropyl, isobutyl. Aliphatics: hexane, heptane. Other: soap solution, naphtha.

Do not use partially halogenated hydrocarbons such as 1,1.1 trichloroethane, ketones such as MEK, acetone, chloroform, ethyl acetate, methylene dichloride, phenol, methylene chloride, or N-methylpyrolldone. Also, Avago does not recommend the use of cleaners that use halogenated hydrocarbons because of their potential environmental harm.

## Mechanical Dimensions

Vertical Module

$30^{\circ}$ Tilted Modules

DIMENSIONS IN MILLIMETERS (INCHES).

## Interlocked (Stacked) Assemblies (refer to Figure 1)

Horizontal packages may be stacked by placing units with pins facing upward. Initially engage the interlocking mechanism by sliding the $L$ bracket body from above into the $L$ slot body of the lower package. Use a straight edge, such as a ruler, to bring all stacked units into uniform alignment. This technique prevents potential harm that could occur to fingers and hands of assemblers from the package pins. Stacked horizontal

## Stacking Horizontal Modules

## Stacking $30^{\circ}$ Tilted Modules

Figure 1. Interlocked (stacked) horizontal, vertical or $30^{\circ}$ tilted packages
packages can be disengaged if necessary. Repeated stacking and unstacking causes no damage to individual units.

To stack vertical packages, hold one unit in each hand, with the pins facing away and the optical ports on the bottom. Slide the $L$ bracket unit into the $L$ slot unit. The straight edge used for horizontal package alignment is not needed.

## Stacking Vertical Modules

## 5 MBd Link (HFBR-15X1ETZ/25X1ETZ)

System Performance $-40^{\circ}$ to $85^{\circ} \mathrm{C}$ unless otherwise specified.

|  | Parameter | Symbol | Min. | Typ. | Max. | Units | Conditions | Ref. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Notes:

1. The propagation delay for one metre of cable is typically 5 ns .
2. Typical propagation delay is measured at $P_{R}=-15 \mathrm{dBm}$.
3. Estimated typical link life expectancy at $40^{\circ} \mathrm{C}$ exceeds 10 years at 60 mA .

| High Level Output Current | IOH |  | 5 | 250 | $\mu \mathrm{A}$ | $\mathrm{V}_{\mathrm{O}}=18 \mathrm{~V}, \mathrm{P}_{\mathrm{R}}=0$ | Note 3 |
| Low Level Output Voltage | VOL |  | 0.4 | 0.5 | V | $\begin{aligned} & \hline \mathrm{IOL}=8 \mathrm{~mA}, \\ & \mathrm{P}_{\mathrm{R}}=\mathrm{P}_{\mathrm{R}(\mathrm{~L}) \mathrm{MIN}} \\ & \hline \end{aligned}$ | Note 3 |
| High Level Supply Current | ICCH |  | 3.5 | 6.3 | mA | $\begin{aligned} & \mathrm{V}_{\mathrm{CC}}=5.25 \mathrm{~V}, \\ & \mathrm{P}_{\mathrm{R}}=0 \end{aligned}$ | Note 3 |
| Low Level Supply Current | $\mathrm{I}_{\text {CCL }}$ |  | 6.2 | 10 | mA | $\begin{aligned} & \mathrm{V}_{\mathrm{CC}}=5.25 \mathrm{~V} \\ & \mathrm{P}_{\mathrm{R}}=-12.5 \mathrm{dBm} \end{aligned}$ | Note 3 |
| Effective Diameter | D |  | 1 |  | mm |  |  |
| Internal Pull-up Resistor | $\mathrm{R}_{\mathrm{L}}$ | 680 | 1000 | 1700 | $\Omega$ |  |  |

## Notes:

1. Optical flux, $P(d B m)=10 \log [P(\mu W) / 1000 \mu W]$.
2. Optical power measured at the end of 1 mm diameter $\mathrm{POF}(\mathrm{NA}=0.5)$ with a large area detector.
3. $R_{L}$ is open.
4. Pulsed LED operation at $\mathrm{I}_{\mathrm{F}}>80 \mathrm{~mA}$ will cause increased link $t_{\text {PLH }}$ propagation delay time. This extended tpLH time contributes to increased pulse width distortion of the receiver output signal.

## 1 MBd Link

(High Performance HFBR-15X2ETZ/25X2ETZ)
System Performance Under recommended operating conditions unless otherwise specified.

|  | Parameter | Symbol | Min. | Typ. | Max. | Units | Conditions | Ref. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| High <br> Performance <br> 1 MBd | Data Rate |  | dc |  | 1 | MBd | BER $\leq 10^{-9}$, PRBS:27-1 |  |
|  | Link Distance (Standard Cable) | d | $\begin{aligned} & 37 \\ & 58 \end{aligned}$ |  |  | $\begin{aligned} & \mathrm{m} \\ & \mathrm{~m} \end{aligned}$ | $\begin{aligned} & \mathrm{I}_{\mathrm{Fdc}}=60 \mathrm{~mA} \\ & \mathrm{I}_{\mathrm{Fdc}}=60 \mathrm{~mA}, 25^{\circ} \mathrm{C} \end{aligned}$ | Notes 1, 3,4 |
|  | Link Distance (Improved Cable) | d | $\begin{aligned} & 43 \\ & 67 \end{aligned}$ |  |  | $\begin{aligned} & \mathrm{m} \\ & \mathrm{~m} \end{aligned}$ | $\begin{aligned} & \mathrm{I}_{\mathrm{Fdc}}=60 \mathrm{~mA} \\ & \mathrm{I}_{\mathrm{Fdc}}=60 \mathrm{~mA}, 25^{\circ} \mathrm{C} \end{aligned}$ | Notes 1, $3,4$ |
|  | Propagation Delay | $\begin{aligned} & \text { tpLH } \\ & \mathrm{t}_{\text {PHL }} \end{aligned}$ |  | $\begin{gathered} 100 \\ 80 \end{gathered}$ | $\begin{aligned} & 250 \\ & 140 \end{aligned}$ | $\begin{aligned} & \text { ns } \\ & \text { ns } \end{aligned}$ | $\begin{aligned} & \mathrm{R}_{\mathrm{L}}=560 \Omega, \mathrm{C}_{\mathrm{L}}=30 \mathrm{pF} \\ & \mathrm{I}=0.5 \text { metre } \\ & \mathrm{P}_{\mathrm{R}}=-24 \mathrm{dBm} \end{aligned}$ | Fig. 10, 12 <br> Notes 2, 4 |
|  | Pulse Width Distortion $t_{\text {PLH }}-t_{\text {PHL }}$ | $t_{D}$ |  | 20 |  | ns | $\begin{aligned} & \mathrm{P}_{\mathrm{R}}=-24 \mathrm{dBm} \\ & \mathrm{R}_{\mathrm{L}}=560 \Omega, \mathrm{C}_{\mathrm{L}}=30 \mathrm{pF} \end{aligned}$ | Fig. 10, 11 <br> Note 4 |

## Notes:

1. For $\mathrm{I}_{\mathrm{FPK}}>80 \mathrm{~mA}$, the duty factor must be such as to keep $\mathrm{I}_{\mathrm{Fdc}} \leq 80 \mathrm{~mA}$. In addition, for $\mathrm{I}_{\mathrm{FPK}}>80 \mathrm{~mA}$, the following rules for pulse width apply: $I_{\text {FPK }} \leq 160 \mathrm{~mA}$ : Pulse width $\leq 1 \mathrm{~ms}$
$I_{\text {FPK }}>160 \mathrm{~mA}$ : Pulse width $\leq 1 \mu \mathrm{~S}$, period $\geq 20 \mu \mathrm{~S}$.
2. The propagation delay for one meter of cable is typically 5 ns .
3. Estimated typical link life expectancy at $40^{\circ} \mathrm{C}$ exceeds 10 years at 60 mA .
4. Pulsed LED operation at $\mathrm{I}_{\text {FPK }}>80 \mathrm{~mA}$ will cause increased link tPLH propagation delay time. This extended tpLH time contributes to increased pulse width distortion of the receiver output signal.

| Output Collector Current | $\mathrm{P}_{\mathrm{OD}}$ |  | 40 | mW |  |  |
| Output Collector Power Dissipation | $\mathrm{V}_{\mathrm{O}}$ | -0.5 | 18 | V |  |  |
| Output Voltage | $\mathrm{V}_{\mathrm{P}}$ | -5 | $\mathrm{~V}_{\mathrm{CC}}$ | V |  |  |
| Pull-up Voltage | N |  | 5 |  |  |  |
| Fan Out (TTL) |  |  |  |  |  |  |

## Notes:

1. 1.6 mm below seating plane.
2. It is essential that a bypass capacitor $0.1 \mu \mathrm{~F}$ be connected from pin 2 to pin 3 of the receiver. Total lead length between both ends of the capacitor and the pins should not exceed 20 mm .
3. Moisture sensitivity level is MSL-3

Receiver Electrical/Optical Characteristics $-40^{\circ}$ to $85^{\circ} \mathrm{C}, 4.75 \mathrm{~V} \leq \mathrm{V}_{\mathrm{CC}} \leq 5.25 \mathrm{~V}$ unless otherwise specified.

| Parameter | Symbol | Min. | Typ. | Max. | Units | Conditions | Ref. |
| :--- | :---: | :---: | :---: | :---: | :---: | :--- | :---: |
| Receiver Optical Input <br> Power Level Logic 0 | $\mathrm{P}_{\mathrm{R}(\mathrm{L})}$ | -24 |  | -9.5 | dBm | $\mathrm{V}_{\mathrm{OL}} \leq 0.5 \mathrm{~V}$ <br> $\mathrm{I}_{\mathrm{OL}}=8 \mathrm{~mA}$ | Notes $1,2,3$ |
| Optical Input Power <br> Level Logic 1 | $\mathrm{P}_{\mathrm{R}(\mathrm{H})}$ |  |  | -43 | dBm | $\mathrm{V}_{\mathrm{OH}}=5.25 \mathrm{~V}$ <br> $\mathrm{I}_{\mathrm{OH}}=\leq 250 \mu \mathrm{~A}$ | Note 4 |
| High Level Output Current | $\mathrm{I}_{\mathrm{OH}}$ |  | 5 | 250 | $\mu \mathrm{~A}$ | $\mathrm{~V}_{\mathrm{O}}=18 \mathrm{~V}, \mathrm{P}_{\mathrm{R}}=0$ | Note 5 |
| Low Level Output Voltage | $\mathrm{V}_{\mathrm{OL}}$ |  | 0.4 | 0.5 | V | $\mathrm{I}_{\mathrm{OL}}=8 \mathrm{~mA}$ <br> $\mathrm{P}_{\mathrm{R}}=\mathrm{P}_{\mathrm{R}(\mathrm{L}) \mathrm{MIN}}$ | Note 5 |

| Effective Diameter | D |  | 1 |  | mm |  |  |
| Internal Pull-up Resistor | $\mathrm{R}_{\mathrm{L}}$ | 680 | 1000 | 1700 | $\Omega$ |  |  |

## Notes:

1. Optical power measured at the end of 1 mm diameter $\mathrm{POF}(\mathrm{NA}=0.5)$ with a large area detector.
2. Pulsed LED operation at $\mathrm{I}_{\mathrm{F}}>80 \mathrm{~mA}$ will cause increased link $\mathrm{t}_{\text {PLH }}$ propagation delay time. This extended $\mathrm{t}_{\text {PLH }}$ time contributes to increased pulse width distortion of the receiver output signal.
3. The LED drive circuit of Figure 11 is required for 1 MBd operation of the HFBR-25X2ETZ.
4. Optical flux, $\mathrm{P}(\mathrm{dBm})=10 \log [\mathrm{P}(\mu \mathrm{W}) / 1000 \mu \mathrm{~W}]$.
5. $R_{L}$ is open.
