

AMP02
FEATURES

- Low Offset Voltage 100 μ V Max
- Low Drift 2 μ V/ $^{\circ}$ C Max
- Wide Gain Range 1 to 10,000
- High Common-Mode Rejection 115dB Min
- High Bandwidth (G = 1000) 200kHz Typ
- Gain Equation Accuracy 0.5% Max
- Single Resistor Gain Set
- Input Overvoltage Protection
- Low Cost
- Available in Die Form

APPLICATIONS

- Differential Amplifier
- Strain Gauge Amplifier
- Thermocouple Amplifier
- RTD Amplifier
- Programmable Gain Instrumentation Amplifier
- Medical Instrumentation
- Data Acquisition Systems

ORDERING INFORMATION[†]

T _A = +25°C			
V _{ios} MAX (μ V)	V _{oos} MAX (mV)	PLASTIC 8-PIN	OPERATING TEMPERATURE RANGE
100	4	AMP02EP	XIND
200	8	AMP02FP	XIND

[†] Burn-in is available on commercial and industrial temperature range parts in CerDIP, plastic DIP, and TO-can packages.

GENERAL DESCRIPTION

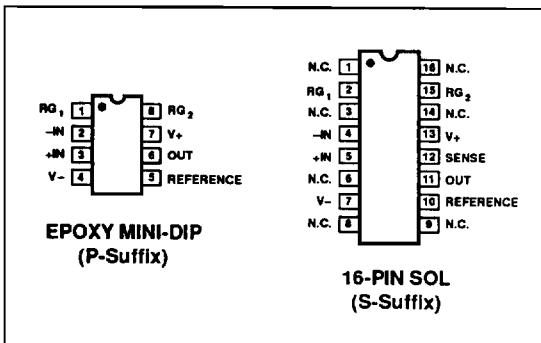

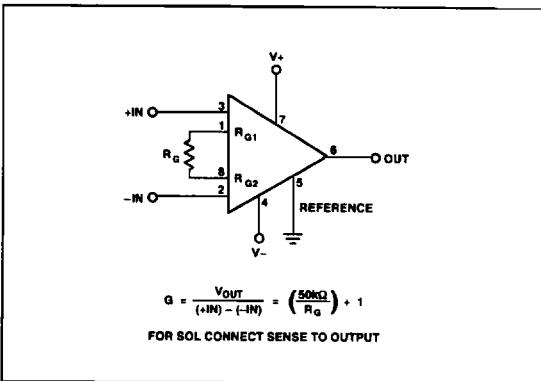

The AMP-02 is the first precision instrumentation amplifier available in an 8-pin package. Gain of the AMP-02 is set by a single external resistor, and can range from 1 to 10,000. No gain set resistor is required for unity gain. The AMP-02 includes an input protection network that allows the inputs to be taken 60V beyond either supply rail without damaging the device.

Laser trimming reduces the input offset voltage to under 100 μ V. Output offset voltage is below 4mV and gain accuracy is better than 0.5% for gain of 1000. PMI's proprietary thin-film resistor process keeps the gain temperature coefficient under 50 ppm/ $^{\circ}$ C.

Due to the AMP-02's design, its bandwidth remains very high over a wide range of gain. Slew rate is over 4V/ μ s making the AMP-02 ideal for fast data acquisition systems.

A reference pin is provided to allow the output to be referenced to an external DC level. This pin may be used for offset correction or level shifting as required. In the 8-pin package, sense is internally connected to the output.

For an instrumentation amplifier with the highest precision, consult the AMP-01 data sheet. For the highest input impedance and speed, consult the AMP-05 data sheet.

PIN CONNECTIONS

BASIC CIRCUIT CONNECTIONS

AMP02

ABSOLUTE MAXIMUM RATINGS

Supply Voltage	$\pm 18V$
Common-Mode Input Voltage	$[(V-) - 60V]$ to $[(V+) + 60V]$
Differential Input Voltage	$[(V-) - 60V]$ to $[(V+) + 60V]$
Output Short-Circuit Duration	Continuous
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-65°C to +150°C
Junction Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 10 sec)	+300°C

PACKAGE TYPE	Θ_{JA} (Note 2)	Θ_{JC}	UNITS
8-Pin Plastic DIP (P)	96	37	°C/W
16-Pin SOL (S)	92	27	°C/W

NOTE:

1. Absolute maximum ratings apply to both DICE and packaged parts, unless otherwise noted.
2. Θ_{JA} is specified for worst case mounting conditions, i.e., Θ_{JA} is specified for device in socket for P-DIP package; Θ_{JA} is specified for device soldered to printed circuit board for SOL package.

ELECTRICAL CHARACTERISTICS at $V_S = \pm 15V$, $V_{CM} = 0V$, $T_A = +25^\circ C$, unless otherwise noted.
