H-Bridge/Full Bridge Array of P and N channel MOSFETs

1. Functional Description of the AMG-PI004

The AMG-PI004 is built by utilizing one of the latest state-of-the-art trench technologies to achieve ultra low resistance RDS(on) for the power MOSFETs. The complementary H-bridge consists of 2 PMOS/NMOS transistor pairs. Based on this trench-technology the input gate capacity is very low, so that high switching frequencies are possible thus making it ideal for use in different applications. The DFN8 package is footprint compatible with the SOP8 package, making the H-bridge an ideal choice for wide spread off high efficiency applications for motor driving, lighting, and power management.

2. Features

- Supply voltage 5VDC...60VDC
- Complementary N/P-MOS H-Bridge
- 60V/5.1A/ RDS(on) =34mΩ(typ)
  -60V/-4.2A/ RDS(on) =54mΩ(typ)
- Low QG of 9.86/12.6nC for PMOS/NMOS
  Low CISS of 1447pF/1378pF for PMOS/NMOS
- Low voltage gate drive VGS = ±20V
- RoHS compliant and green product
- Temperature Range -55C…+150C
- DFN8L (5mm x 6mm x 0.75 mm)

3. Application

The AMG-PI004 is suitable for motor driving, lighting and power management.

3.1. Application Circuit Example

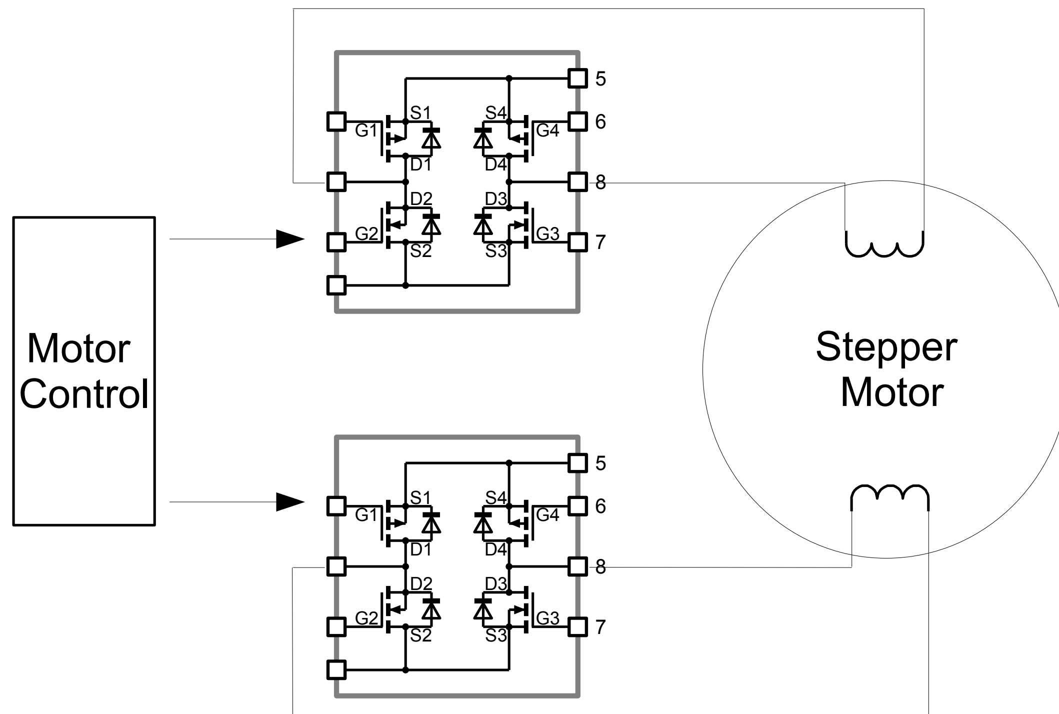

Figure 1: Application Circuit Example.

3.2. Application Notes

The thermal resistance of the DFN8L package can be enhanced by using the bottom pad as heat sinks.

In order to lower the thermal resistance, vias should be placed below the Drain and Source pads. These vias should connect to big enough heat sinks within the PCB. This will also be beneficial for the ohmic resistance of the traces.

14. Notes and Cautions

14.1. ESD Protection

The Requirements for Handling Electrostatic Discharge Sensitive Devices are described in the JEDEC standard JESD625-A. Please note the following recommendations:

- ❑ When handling the device, operators must be grounded by wearing a for the purpose designed grounded wrist strap with at least 1MΩ resistance and direct skin contact.
- ❑ Operators must at all times wear ESD protective shoes or the area should be surrounded by for ESD protection intended floor mats.
- ❑ Opening of the protective ESD package that the device is delivered in must only occur at a properly equipped ESD workbench. The tape with which the package is held together must be cut with a sharp cutting tool, never pulled or ripped off.
- ❑ Any unnecessary contact with the device or any unprotected conductive points should be avoided.
- ❑ Work only with qualified and grounded tools, measuring equipment, casing and workbenches.
- ❑ Outside properly protected ESD-areas the device or any electronic assembly that it may be part of should always be transported in EGB/ESD shielded packaging.

14.2. Storage conditions

The AMG-PI004 corresponds to moisture sensitivity classification **ML2** , according to JEDEC standard J-STD-020, and should be handled and stored according to J-STD-033.
