2.30 GHz – 2.40 GHz

50 Watt High Power SPDT Switch with LNA Module

Data Sheet

Description

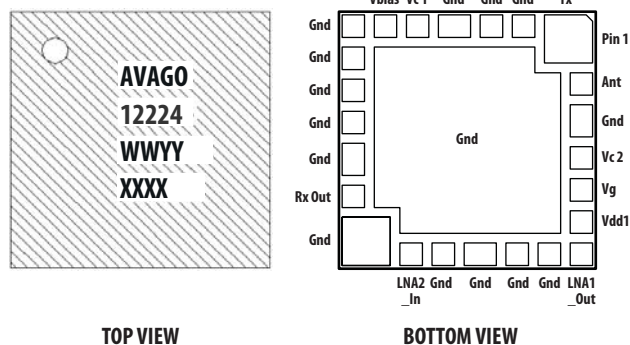

Avago Technologies' ALM-12224 is a multi-chip integrated module that comprise of a 50 Watt CW high power SPDT switch, 1st stage low noise amplifier and 2nd stage high gain driver amplifier through the use of Avago Technologies' proprietary 0.25um GaAs Enhancement-mode pHEMT process and low distortion silicon PIN diode technologies.

The ALM-12224 is housed in a compact 8.0 x 8.0 x 1.2 mm³ molded-chips-on-board (MCOB) module package with 24 pin configuration pads, offering significant PCB space saving as compare to conventional discrete design approach.

The device offers high power protection switch (Tx mode operation) with very low insertion loss. During Rx mode operation, the receiver chain provides a very low NF and high gain that makes it an ideal choice for cellular infrastructure in TD-LTE applications.
