

# ML610Q421/ML610Q422

8-bit Microcontroller with a Built-in LCD driver

## GENERAL DESCRIPTION

This LSI is a high-performance 8-bit CMOS microcontroller into which rich peripheral circuits, such as synchronous serial port, UART, I<sup>2</sup>C bus interface (master), melody driver, battery level detect circuit, RC oscillation type A/D converter, 12-bit successive approximation type A/D converter, and LCD driver, are incorporated around 8-bit CPU nX-U8/100.

The CPU nX-U8/100 is capable of efficient instruction execution in 1-instruction 1-clock mode by 3-stage pipe line architecture parallel procesing. The Flash ROM that is installed as program memory achieves low-voltage low-power consumption operation (read operation) equivalent to mask ROM and is most suitable for battery-driven applications.

The on-chip debug function that is installed enables program debugging and programming.

## FEATURES

- CPU
  - 8-bit RISC CPU (CPU name: nX-U8/100)
  - Instruction system: 16-bit instructions
  - Instruction set: Transfer, arithmetic operations, comparison, logic operations, multiplication/division, bit manipulations, bit logic operations, jump, conditional jump, call return stack manipulations, arithmetic shift, and so on
  - On-Chip debug function
  - Minimum instruction execution time
    - 30.5 µs (@32.768 kHz system clock)
    - 0.24 4µs (@4.096 MHz system clock)
- Internal memory
  - Internal 32KBbyte Flash ROM (16K×16 bits) (including unusable 1KByte TEST area)
  - Internal 1KByte Data RAM (1024×8 bits), 1KByte Display Allocation RAM (1024 x 8bit)
  - Internal 100Byte RAM for display
- Interrupt controller
  - 2 non-maskable interrupt sources (Internal source: 1, External source: 1)
  - 20 maskable interrupt sources (Internal sources: 16, External sources: 4)
- Time base counter
  - Low-speed time base counter ×1 channel
    - Frequency compensation (Compensation range: Approx. -488ppm to +488ppm. Compensation accuracy: Approx. 0.48ppm)
  - High-speed time base counter ×1 channel
- Watchdog timer
  - Non-maskable interrupt and reset
  - Free running
  - Overflow period: 4 types selectable (125ms, 500ms, 2s, and 8s)
- Timers
  - 8 bits × 4 channels (Timer0-3: 16-bit x 2 configuration available by using Timer0-1 or Timer2-3)
  - Clock frequency measurement mode (in one channel of 16-bit configuration using Timer2-3)

- 1 kHz timer
  - 10 Hz/1 Hz interrupt function
- Capture
  - Time base capture × 2 channels (4096 Hz to 32 Hz)
- PWM
  - Resolution 16 bits × 1 channel
- Synchronous serial port
  - Master/slave selectable
  - LSB first/MSB first selectable
  - 8-bit length/16-bit length selectable
- UART
  - TXD/RXD × 1 channel
  - Bit length, parity/no parity, odd parity/even parity, 1 stop bit/2 stop bits
  - Positive logic/negative logic selectable
  - Built-in baud rate generator
- I<sup>2</sup>C bus interface
  - Master function only
  - Fast mode (400 kbps@4MHz), standard mode (100 kbps@1MHz, 50kbps@500kHz)
- Melody driver
  - Scale: 29 types (Melody sound frequency: 508 Hz to 32.768 kHz)
  - Tone length: 63 types
  - Tempo: 15 types
  - Buzzer output mode (4 output modes, 8 frequencies, 16 duty levels)
- RC oscillation type A/D converter
  - 24-bit counter
  - Time division × 2 channels
- Successive approximation type A/D converter
  - 12-bit A/D converter
  - Input × 2 channels
- General-purpose ports
  - Non-maskable interrupt input port × 1 channel
  - Input-only port × 6 channels (including secondary functions)
  - Output-only port × 3 channels (including secondary functions)
  - Input/output port
    - ML610Q421: 22 channels (including secondary functions)
    - ML610Q422: 14 channels (including secondary functions)

- LCD driver
  - Dot matrix can be supported.  
ML610Q421: 400 dots max. (50 seg × 8 com), 1/1 to 1/8 duty  
ML610Q422: 800 dots max. (50 seg × 16 com), 1/1 to 1/16 duty
  - 1/3 or 1/4 bias (built-in bias generation circuit)
  - Frame frequency selectable (approx. 64 Hz, 73 Hz, 85 Hz, and 102 Hz)
  - Bias voltage multiplying clock selectable (8 types)
  - Contrast adjustment (1/3 bias: 32 steps, 1/4 bias: 20 steps)
  - LCD drive stop mode, LCD display mode, all LCDs on mode, and all LCDs off mode selectable
  - Programmable display allocation function (available only when 1/1~1/8 duty is selected)
- Reset
  - Reset through the RESET\_N pin
  - Power-on reset generation when powered on
  - Reset when oscillation stop of the low-speed clock is detected (ML610Q421B/ML610Q422B does not have this function)
  - Reset by the watchdog timer (WDT) overflow
- Power supply voltage detect function
  - Judgment voltages: One of 16 levels
  - Judgment accuracy: ±2% (Typ.)
- Clock
  - Low-speed clock: (This LSI can not guarantee the operation without low-speed clock)  
Crystal oscillation (32.768 kHz)
  - High-speed clock:  
Built-in RC oscillation (500 kHz)  
Built-in PLL oscillation (8.192 MHz ±2.5%), crystal/ceramic oscillation (4.096 MHz), external clock
  - Selection of high-speed clock mode by software:  
Built-in RC oscillation, built-in PLL oscillation, crystal/ceramic oscillation, external clock
- Power management
  - HALT mode: Instruction execution by CPU is suspended (peripheral circuits are in operating states).
  - STOP mode: Stop of low-speed oscillation and high-speed oscillation (Operations of CPU and peripheral circuits are stopped.)
  - Clock gear: The frequency of high-speed system clock can be changed by software (1/1, 1/2, 1/4, or 1/8 of the oscillation clock)
  - Block Control Function: Power down (reset registers and stop clock supply) the circuits of unused peripherals.

**PIN DESCRIPTION**

| Pin name                                 | I/O | Description   | Primary/<br>Secondary/<br>Tertiary | Logic    |
|--|-----|---|------------------------------------|----------|
| <b>System</b>                            |     |   |                                    |          |
| RESET_N                                  | I   | Reset input pin. When this pin is set to a "L" level, system reset mode is set and the internal section is initialized. When this pin is set to a "H" level subsequently, program execution starts. A pull-up resistor is internally connected.       | —                                  | Negative |
| XT0                                      | I   | Crystal connection pin for low-speed clock.   | —                                  | —        |
| XT1                                      | O   | A 32.768 kHz crystal oscillator (see measuring circuit 1) is connected to this pin. Capacitors CDL and CGL are connected across this pin and V <sub>SS</sub> as required.   | —                                  | —        |
| OSC0                                     | I   | Crystal/ceramic connection pin for high-speed clock.  | Secondary                          | —        |
| OSC1                                     | O   | A crystal or ceramic is connected to this pin (4.1 MHz max.). Capacitors CDH and CGH (see measuring circuit 1) are connected across this pin and V <sub>SS</sub> . This pin is used as the secondary function of the P10 pin(OSC0) and P11 pin(OSC1). | Secondary                          | —        |
| LSCLK                                    | O   | Low-speed clock output pin. This pin is used as the secondary function of the P20 pin.  | Secondary                          | —        |
| OUTCLK                                   | O   | High-speed clock output pin. This pin is used as the secondary function of the P21 pin.   | Secondary                          | —        |
| <b>General-purpose input port</b>        |     |   |                                    |          |
| P00-P03                                  | I   | General-purpose input port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.  | Primary                            | Positive |
| P10-P11                                  | I   | General-purpose input port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.  | Primary                            | Positive |
| <b>General-purpose output port</b>       |     |   |                                    |          |
| P20-P22                                  | O   | General-purpose output port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.   | Primary                            | Positive |
| <b>General-purpose input/output port</b> |     |   |                                    |          |
| P30-P35                                  | I/O | General-purpose input/output port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.   | Primary                            | Positive |
| P40-P47                                  | I/O | General-purpose input/output port.<br>Since these pins have secondary functions, the pins cannot be used as a port when the secondary functions are used.   | Primary                            | Positive |
| PA0-PA7                                  | I/O | General-purpose input/output port.<br>These pins are for the ML610Q421, but are not provided in the ML610Q422.  | Primary                            | Positive |

| Pin name                            | I/O | Description  | Primary/<br>Secondary/<br>Tertiary | Logic             |
|-------------------------------------|-----|--|------------------------------------|-------------------|
| <b>UART</b>                         |     |  |                                    |                   |
| TXD0                                | O   | UART data output pin. This pin is used as the secondary function of the P43 pin.   | Secondary                          | Positive          |
| RXD0                                | I   | UART data input pin. This pin is used as the secondary function of the P42 or the primary function of the P02 pin.   | Primary/Secondary                  | Positive          |
| <b>I<sup>2</sup>C bus interface</b> |     |  |                                    |                   |
| SDA                                 | I/O | I <sup>2</sup> C data input/output pin. This pin is used as the secondary function of the P40 pin. This pin has an NMOS open drain output. When using this pin as a function of the I <sup>2</sup> C, externally connect a pull-up resistor. | Secondary                          | Positive          |
| SCL                                 | O   | I <sup>2</sup> C clock output pin. This pin is used as the secondary function of the P41 pin. This pin has an NMOS open drain output. When using this pin as a function of the I <sup>2</sup> C, externally connect a pull-up resistor.      | Secondary                          | Positive          |
| <b>Synchronous serial (SSIO)</b>    |     |  |                                    |                   |
| SCK0                                | I/O | Synchronous serial clock input/output pin. This pin is used as the tertiary function of the P41 or P45 pin.  | Tertiary                           | —                 |
| SIN0                                | I   | Synchronous serial data input pin. This pin is used as the tertiary function of the P40 or P44 pin.  | Tertiary                           | Positive          |
| SOUT0                               | O   | Synchronous serial data output pin. This pin is used as the tertiary function of the P42 or P46 pin.   | Tertiary                           | Positive          |
| <b>PWM</b>                          |     |  |                                    |                   |
| PWM0                                | O   | PWM0 output pin. This pin is used as the tertiary function of the P43 or P34 pin.  | Tertiary                           | Positive          |
| T02P0CK                             | O   | PWM0 external clock input pin. This pin is used as the primary function of the P44 pin.  | Primary                            | —                 |
| <b>External interrupt</b>           |     |  |                                    |                   |
| NMI                                 | I   | External non-maskable interrupt input pin. An interrupt is generated on both edges.  | Primary                            | Positive/negative |
| EXI0-3                              | I   | External maskable interrupt input pins. Interrupt enable and edge selection can be performed for each bit by software. These pins are used as the primary functions of the P00-P03 pins.   | Primary                            | Positive/negative |
| <b>Capture</b>                      |     |  |                                    |                   |
| CAP0                                | I   | Capture trigger input pins. The value of the time base counter is captured in the register synchronously with the interrupt edge selected by software.   | Primary                            | Positive/negative |
| CAP1                                | I   | These pins are used as the primary functions of the P00 pin(CAP0) and P01 pin(CAP1).   | Primary                            | Positive/negative |
| <b>Timer</b>                        |     |  |                                    |                   |
| T02P0CK                             | I   | External clock input pin used for both Timer 0 and Timer 2. The clocks for these timers are selected by software. This pin is used as the primary function of the P44 pin.   | Primary                            | —                 |
| T13P1CK                             | I   | External clock input pin used for both Timer 1 and Timer 3. The clocks for these timers are selected by software. This pin is used as the primary function of the P45 pin.   | Primary                            | —                 |
| <b>Melody</b>                       |     |  |                                    |                   |
| MD0                                 | O   | Melody/buzzer signal output pin. This pin is used as the secondary function of the P22 pin.  | Secondary                          | Positive/negative |
| <b>LED drive</b>                    |     |  |                                    |                   |
| LED0-2                              | O   | Nch open drain output pins to drive LED.   | Primary                            | Positive/negative |

| Pin name   | I/O | Description  | Primary/<br>Secondary/<br>Tertiary | Logic |
|--|-----|--|------------------------------------|-------|
| <b>RC oscillation type A/D converter</b>           |     |  |                                    |       |
| IN0  | I   | Channel 0 oscillation input pin. This pin is used as the secondary function of the P30 pin.  | Secondary                          | —     |
| CS0  | O   | Channel 0 reference capacitor connection pin. This pin is used as the secondary function of the P31 pin.   | Secondary                          | —     |
| RS0  | O   | This pin is used as the secondary function of the P32 pin which is the reference resistor connection pin of Channel 0.   | Secondary                          | —     |
| RT0  | O   | Resistor sensor connection pin of Channel 0 for measurement. This pin is used as the secondary function of the P34 pin.  | Secondary                          | —     |
| CRT0   | O   | Resistor/capacitor sensor connection pin of Channel 0 for measurement. This pin is used as the secondary function of the P33 pin.  | Secondary                          | —     |
| RCM  | O   | RC oscillation monitor pin. This pin is used as the secondary function of the P35 pin.   | Secondary                          | —     |
| IN1  | I   | Oscillation input pin of Channel 1. This pin is used as the secondary function of the P44 pin.   | Secondary                          | —     |
| CS1  | O   | Reference capacitor connection pin of Channel 1. This pin is used as the secondary function of the P45 pin.  | Secondary                          | —     |
| RS1  | O   | Reference resistor connection pin of Channel 1. This pin is used as the secondary function of the P46 pin.   | Secondary                          | —     |
| RT1  | O   | Resistor sensor connection pin for measurement of Channel 1. This pin is used as the secondary function of the P47 pin.  | Secondary                          | —     |
| <b>Successive approximation type A/D converter</b> |     |  |                                    |       |
| AV <sub>SS</sub>                                   | —   | Negative power supply pin for successive approximation type A/D converter.   | —                                  | —     |
| AV <sub>DD</sub>                                   | —   | Positive power supply pin for successive approximation type A/D converter.   | —                                  | —     |
| V <sub>REF</sub>                                   | —   | Reference power supply pin for successive approximation type A/D converter.  | —                                  | —     |
| AIN0   | I   | Channel 0 analog input for successive approximation type A/D converter.  | —                                  | —     |
| AIN1   | I   | Channel 1 analog input for successive approximation type A/D converter.  | —                                  | —     |
| <b>LCD drive signal</b>                            |     |  |                                    |       |
| COM0-7   | O   | Common output pins.  | —                                  | —     |
| COM8-15  | O   | Common output pins.<br>These pins are for the ML610Q422, but are not provided in the ML610Q421.  | —                                  | —     |
| SEG0-49  | O   | Segment output pin.  | —                                  | —     |
| <b>LCD driver power supply</b>                     |     |  |                                    |       |
| V <sub>L1</sub>                                    | —   | Power supply pins for LCD bias (internally generated). Capacitors Ca, Cb, Cc, and Cd (see measuring circuit 1) are connected between V <sub>SS</sub> and V <sub>L1</sub> , V <sub>L2</sub> , V <sub>L3</sub> , and V <sub>L4</sub> , respectively. | —                                  | —     |
| V <sub>L2</sub>                                    | —   |  | —                                  | —     |
| V <sub>L3</sub>                                    | —   |  | —                                  | —     |
| V <sub>L4</sub>                                    | —   |  | —                                  | —     |
| C1   | —   | Power supply pins for LCD bias (internally generated). Capacitors C12 and C34 (see measuring circuit 1) are connected between C1 and C2 and between C3 and C4, respectively.   | —                                  | —     |
| C2   | —   |  | —                                  | —     |
| C3   | —   |  | —                                  | —     |
| C4   | —   |  | —                                  | —     |
| <b>For testing</b>                                 |     |  |                                    |       |
| TEST   | I/O | Input/output pin for testing. A pull-down resistor is internally connected.  | —                                  | —     |
| <b>Power supply</b>                                |     |  |                                    |       |
| V <sub>SS</sub>                                    | —   | Negative power supply pin.   | —                                  | —     |
| V <sub>DD</sub>                                    | —   | Positive power supply pin.   | —                                  | —     |
| V <sub>DDL</sub>                                   | —   | Positive power supply pin (internally generated) for internal logic. Capacitors CL0 and CL1 (see measuring circuit 1) are connected between this pin and V <sub>SS</sub> .   | —                                  | —     |
| V <sub>DDX</sub>                                   | —   | Plus-side power supply pin (internally generated) for low-speed oscillation. Capacitor Cx (see measuring circuit 1) is connected between this pin and V <sub>SS</sub> .  | —                                  | —     |
| V <sub>PP</sub>                                    | —   | Power supply pin for programming Flash ROM. A pull-up resistor is internally connected.  | —                                  | —     |

**TERMINATION OF UNUSED PINS**

Table 3 shows methods of terminating the unused pins.

**Table 3 Termination of Unused Pins**

| Pin                              | Recommended pin termination |
|----------------------------------|-----------------------------|
| $V_{PP}$                         | Open                        |
| $AV_{DD}$                        | $V_{SS}$                    |
| $AV_{SS}$                        | $V_{SS}$                    |
| $V_{REF}$                        | $V_{REF}$                   |
| AIN0, AIN1                       | Open                        |
| $V_{L1}, V_{L2}, V_{L3}, V_{L4}$ | Open                        |
| C1, C2, C3, C4                   | Open                        |
| RESET_N                          | Open                        |
| TEST                             | Open                        |
| NMI                              | Open                        |
| P00 to P03                       | $V_{DD}$ or $V_{SS}$        |
| P10 to P11                       | $V_{DD}$                    |
| P20 to P22                       | Open                        |
| P30 to P35                       | Open                        |
| P40 to P47                       | Open                        |
| PA0 to PA7                       | Open                        |
| COM0 to 15                       | Open                        |
| SEG0 to 49                       | Open                        |

**Note:**

It is recommended to set the unused input ports and input/output ports to the inputs with pull-down resistors/pull-up resistors or the output mode since the supply current may become excessively large if the pins are left open in the high impedance input setting.

**ELECTRICAL CHARACTERISTICS****ABSOLUTE MAXIMUM RATINGS**(V<sub>SS</sub> = AV<sub>SS</sub> = 0V)

| Parameter              | Symbol            | Condition                      | Rating                       | Unit |
|------------------------|-------------------|--------------------------------|------------------------------|------|
| Power supply voltage 1 | V <sub>DD</sub>   | T <sub>a</sub> = 25°C          | -0.3 to +4.6                 | V    |
| Power supply voltage 2 | AV <sub>DD</sub>  | T <sub>a</sub> = 25°C          | -0.3 to +4.6                 | V    |
| Power supply voltage 3 | V <sub>PP</sub>   | T <sub>a</sub> = 25°C          | -0.3 to +9.5                 | V    |
| Power supply voltage 4 | V <sub>DDL</sub>  | T <sub>a</sub> = 25°C          | -0.3 to +3.6                 | V    |
| Power supply voltage 5 | V <sub>DDX</sub>  | T <sub>a</sub> = 25°C          | -0.3 to +3.6                 | V    |
| Power supply voltage 6 | V <sub>L1</sub>   | T <sub>a</sub> = 25°C          | -0.3 to +1.75                | V    |
| Power supply voltage 7 | V <sub>L2</sub>   | T <sub>a</sub> = 25°C          | -0.3 to +3.5                 | V    |
| Power supply voltage 8 | V <sub>L3</sub>   | T <sub>a</sub> = 25°C          | -0.3 to +5.25                | V    |
| Power supply voltage 9 | V <sub>L4</sub>   | T <sub>a</sub> = 25°C          | -0.3 to +7.0                 | V    |
| Input voltage          | V <sub>IN</sub>   | T <sub>a</sub> = 25°C          | -0.3 to V <sub>DD</sub> +0.3 | V    |
| Output voltage         | V <sub>OUT</sub>  | T <sub>a</sub> = 25°C          | -0.3 to V <sub>DD</sub> +0.3 | V    |
| Output current 1       | I <sub>OUT1</sub> | Port3-A, T <sub>a</sub> = 25°C | -12 to +11                   | mA   |
| Output current 2       | I <sub>OUT2</sub> | Port2, T <sub>a</sub> = 25°C   | -12 to +20                   | mA   |
| Power dissipation      | PD                | T <sub>a</sub> = 25°C          | 1.25                         | W    |
| Storage temperature    | T <sub>STG</sub>  | —                              | -55 to +150                  | °C   |

**RECOMMENDED OPERATING CONDITIONS**(V<sub>SS</sub> = AV<sub>SS</sub> = 0V)

| Parameter   | Symbol                          | Condition                     | Range         | Unit |

## MEASURING CIRCUITS

### MEASURING CIRCUIT 1

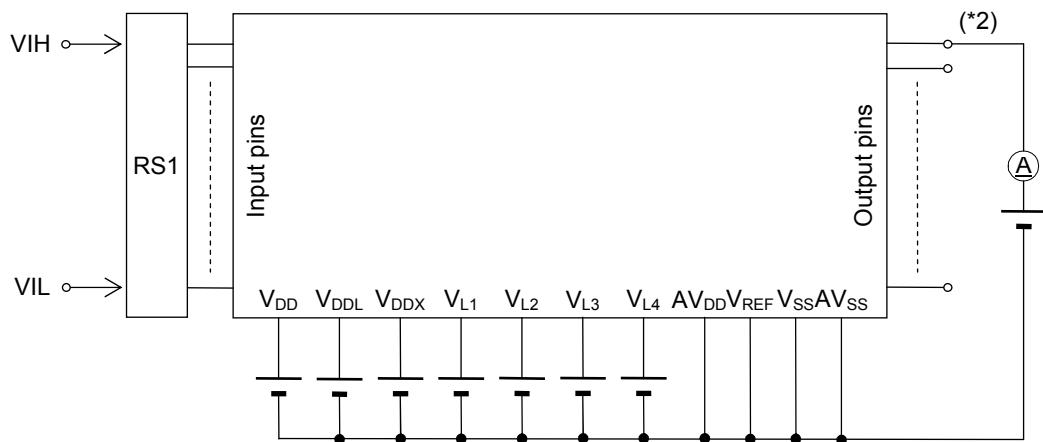

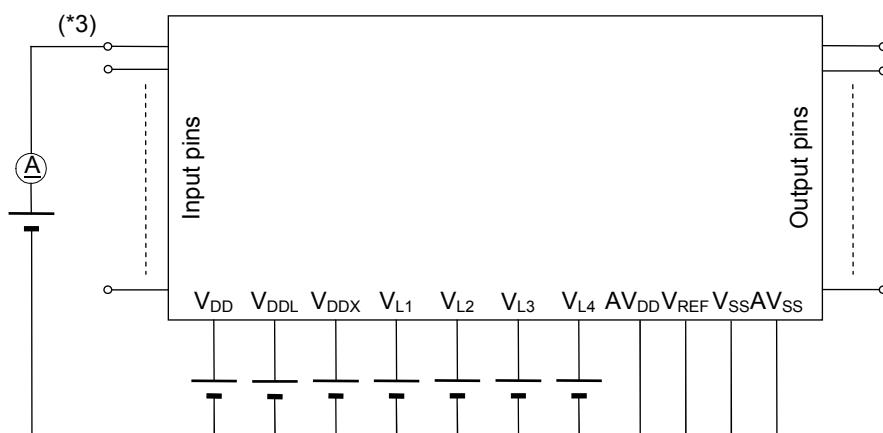

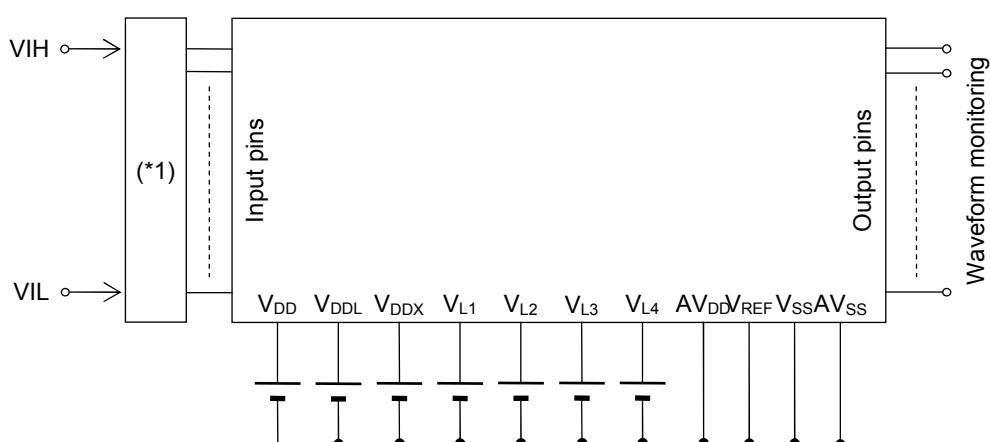

### MEASURING CIRCUIT 2

(\*1) Input logic circuit to determine the specified measuring conditions.

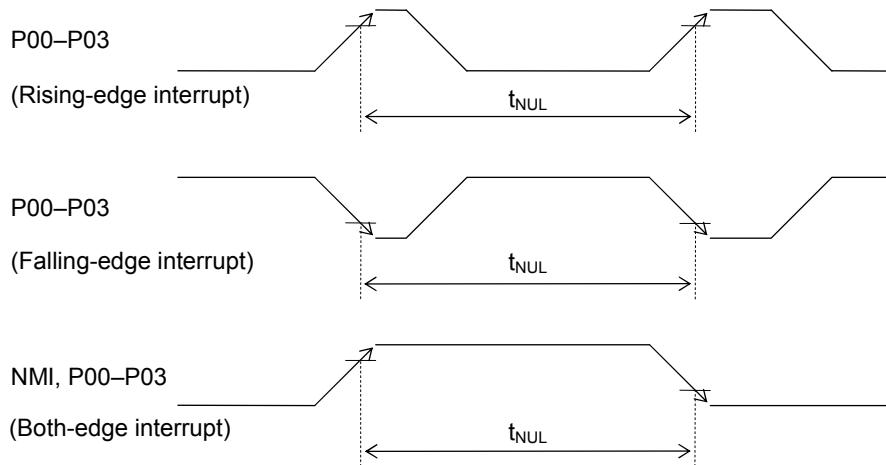

(\*2) Measured at the specified output pins.

**MEASURING CIRCUIT 3****MEASURING CIRCUIT 4****MEASURING CIRCUIT 5**

**AC CHARACTERISTICS (External Interrupt)**

( $V_{DD} = 1.1$  to  $3.6V$ ,  $AV_{DD} = 2.2$  to  $3.6V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_a = -20$  to  $+70^\circ C$ ,  $T_a = -40$  to  $+85^\circ C$  for P version, unless otherwise specified)

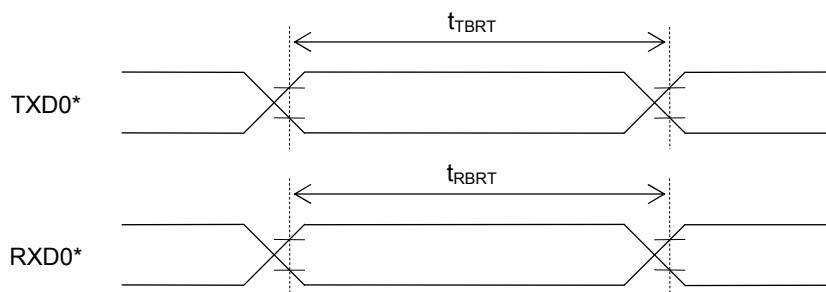

| Parameter                         | Symbol    | Condition  | Rating |      |       | Unit    |
|-----------------------------------|-----------|--|--------|------|-------|---------|
|                                   |           |  | Min.   | Typ. | Max.  |         |
| External interrupt disable period | $t_{NUL}$ | Interrupt: Enabled ( $MIE = 1$ ),<br>CPU: NOP operation<br>System clock: 32.768kHz | 76.8   | —    | 106.8 | $\mu s$ |

**AC CHARACTERISTICS (UART)**

( $V_{DD} = 1.3$  to  $3.6V$ ,  $AV_{DD} = 2.2$  to  $3.6V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_a = -20$  to  $+70^\circ C$ ,  $T_a = -40$  to  $+85^\circ C$  for P version, unless otherwise specified)

| Parameter          | Symbol     | Condition | Rating                   |                   |                          | Unit |
|--------------------|------------|-----------|--------------------------|-------------------|--------------------------|------|
|                    |            |           | Min.                     | Typ.              | Max.                     |      |
| Transmit baud rate | $t_{TBRT}$ | —         | —                        | BRT <sup>*1</sup> | —                        | s    |
| Receive baud rate  | $t_{RBRT}$ | —         | BRT <sup>*1</sup><br>-3% | BRT <sup>*1</sup> | BRT <sup>*1</sup><br>+3% | s    |

\*1: Baud rate period (including the error of the clock frequency selected) set with the UART0 baud rate register (UA0BRTL,H) and the UART0 mode register 0 (UA0MOD0).

\*: Indicates the secondary function of the port.

**AC CHARACTERISTICS (Synchronous Serial Port)**

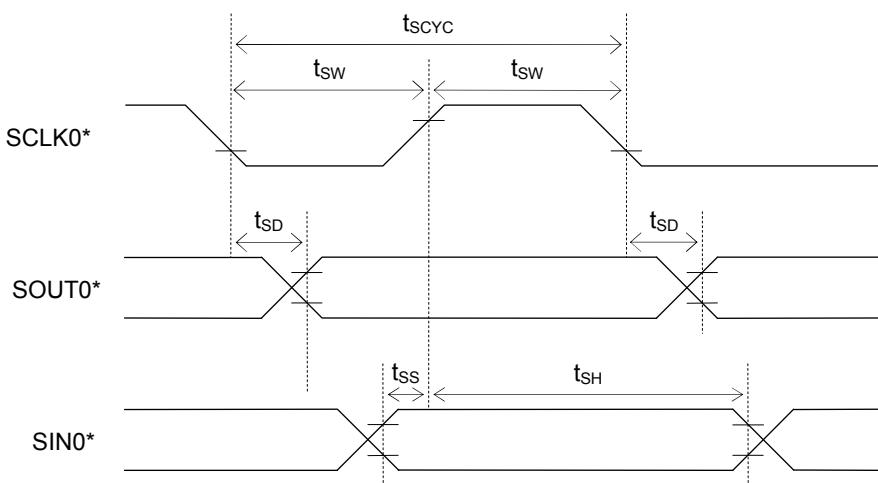

( $V_{DD}$  = 1.3 to 3.6V,  $AV_{DD}$  = 2.2 to 3.6V,  $V_{SS} = AV_{SS} = 0V$ ,  $T_a = -20$  to  $+70^\circ\text{C}$ ,  $T_a = -40$  to  $+85^\circ\text{C}$  for P version, unless otherwise specified)

| Parameter                                | Symbol            | Condition   | Rating                     |                            |                            | Unit |

\*1: Kfx is the ratio of the oscillation frequency by the sensor resistor to the oscillation frequency by the reference resistor on the same conditions.

$$Kfx = \frac{f_{oscx}(RT0-CS0 \text{ oscillation})}{f_{oscx}(RS0-CS0 \text{ oscillation})}, \quad , \quad \frac{f_{oscx}(RT0-1-CS0 \text{ oscillation})}{f_{oscx}(RS0-CS0 \text{ oscillation})}, \quad , \quad \frac{f_{oscx}(RT1-CS1 \text{ oscillation})}{f_{oscx}(RS1-CS1 \text{ oscillation})}$$

(x = 1, 2, 3)

**Note:**

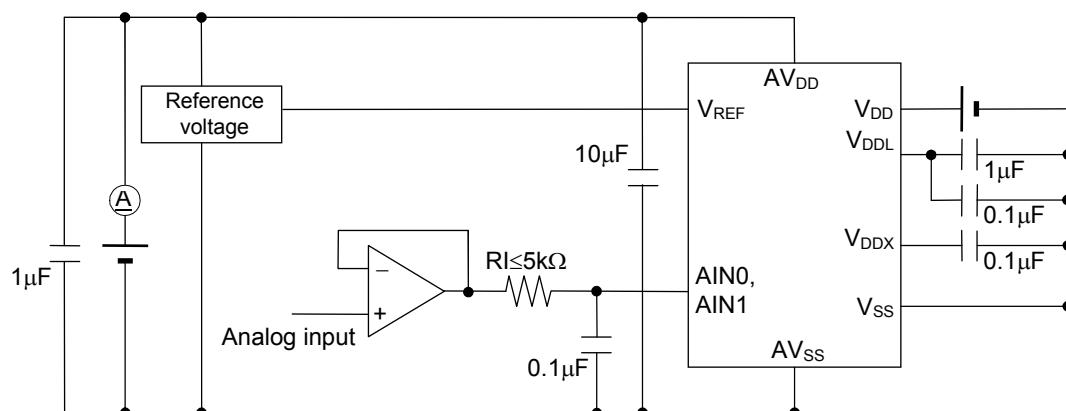

- Please have the shortest layout for the common node (wiring patterns which are connected to the external capacitors, resistors and IN0/IN1 pin), including CVR0/CVR1. Especially, do not have long wire between IN0/IN1 and RS0/RS1. The coupling capacitance on the wires may occur incorrect A/D conversion. Also, please do not have signals which may be a source of noise around the node.
- When RT0/RT1 (Thermistor and etc.) requires long wiring due to the restricted placement, please have VSS(GND) trace next to the signal.
- Please make wiring to components (capacitor, resistor and etc.) necessary for objective measurement. Wiring to reserved components may affect to the A/D conversion operation by noise the components itself may have.

$\phi$ : Period of high-speed clock (HSCLK)

## Package Dimensions

(Unit: mm)

### Notes for Mounting the Surface Mount Type Package

The surface mount type packages are very susceptible to heat in reflow mounting and humidity absorbed in storage. Therefore, before you perform reflow mounting, contact our responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).

| FEDL610Q421-02 | Dec. 3, 2010  | –                | –               | Add to B version   |

**NOTICE**

No copying or reproduction of this document, in part or in whole, is permitted without the consent of LAPI Semiconductor Co., Ltd.

The content specified herein is subject to change for improvement without notice.

The content specified herein is for the purpose of introducing LAPI Semiconductor's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from LAPI Semiconductor upon request.

Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, LAPI Semiconductor shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. LAPI Semiconductor does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by LAPI Semiconductor and other parties. LAPI Semiconductor shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products specified in this document are not designed to be radiation tolerant.

While LAPI Semiconductor always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. LAPI Semiconductor shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). LAPI Semiconductor shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.

If you intend to export or ship overseas any Product or technology specified herein that may be controlled under the Foreign Exchange and the Foreign Trade Law, you will be required to obtain a license or permit under the Law.
