

Features

- Self Bias Architecture
- Small Size
- 3.0 or 5.0 V Operation
- 20.0 dB Small Signal Gain
- 2.0 dB Noise Figure
- +9.0 dBm P1dB Compression Point
- 100% On-Wafer RF, DC and Noise Figure Testing
- 100% Visual Inspection to MIL-STD-883 Method 2010
- RoHS* Compliant and 260°C Reflow Compatible

Description

M/A-COM Tech's three stage 20.0-40.0 GHz GaAs MMIC low noise amplifier has a small signal gain of 20.0 dB with a noise figure of 2.0 dB across the band. This MMIC uses M/A-COM Tech's GaAs PHEMT device model technology, and is based upon electron beam lithography to ensure high repeatability and uniformity. The chip has surface passivation to protect and provide a rugged part with backside via holes and gold metallization to allow either a conductive epoxy or eutectic solder die attach process. This device is well suited for Millimeter-wave Point-to-Point Radio, LMDS, SATCOM and VSAT applications.

Chip Device Layout

Absolute Maximum Ratings

Parameter	Absolute Max.
Supply Voltage (Vd)	+7.0 VDC
Supply Current (Id)	70 mA
Input Power (Pin)	+12 dBm
Storage Temperature (Tstg)	-65 °C to +165 °C
Operating Temperature (Ta)	-55 °C to +85 °C
Channel Temperature (Tch) ¹	+175 °C

1. Channel temperature directly affects a device's MTTF. Channel temperature should be kept as low as possible to maximize lifetime.

Electrical Specifications: 20-40 GHz (Ambient Temperature T = 25°C)

Parameter	Units	Min.	Typ.	Max.
Input Return Loss (S11) ¹ @ 22.0-36.0 GHz	dB	6.0	12.0	-
Output Return Loss (S22) ¹ @ 22.0-36.0 GHz	dB	4.0	10.0	-
Small Signal Gain (S21) ¹	dB	12.0	20.0	-
Gain Flatness (ΔS_{21})	dB	-	+/-4.0	-
Reverse Isolation (S12) ¹	dB	30.0	45.0	-
Noise Figure (NF) ¹ @ 24.0-40.0 GHz	dB	-	2.0	3.0
Output Power for 1dB Compression Point (P1dB) @ 5.0 V	dBm	-	+9.0	-
Output Third Order Intercept Point (OIP3) @ 5.0 V	dBm	-	+16.0	-
Drain Bias Voltage (Vd)	VDC	-	+3.0	+5.0
Supply Current (Id) (Vd=3.0 V or 5.0 V)	mA	-	35	50

1. Unless otherwise indicated min/max over 20.0-40.0 GHz and biased at Vd=5 V, Id=50 mA.

Typical Performance Curves (On-Wafer¹)

Note [1] Measurements – On-Wafer data has been taken using bias conditions as shown. Measurements are referenced 150 um in from RF In/Out pad edge. For optimum performance M/A-COM-Tech T-pad transition is recommended. For additional information see the M/A-COM-Tech “T-Pad Transition” application note.

ADVANCED: Data Sheets contain information regarding a product M/A-COM Technology Solutions is considering for development. Performance is based on target specifications, simulated results, and/or prototype measurements. Commitment to develop is not guaranteed.
PRELIMINARY: Data Sheets contain information regarding a product M/A-COM Technology Solutions has under development. Performance is based on engineering tests. Specifications are typical. Mechanical outline has been fixed. Engineering samples and/or test data may be available. Commitment to produce in volume is not guaranteed.

Mechanical Drawing

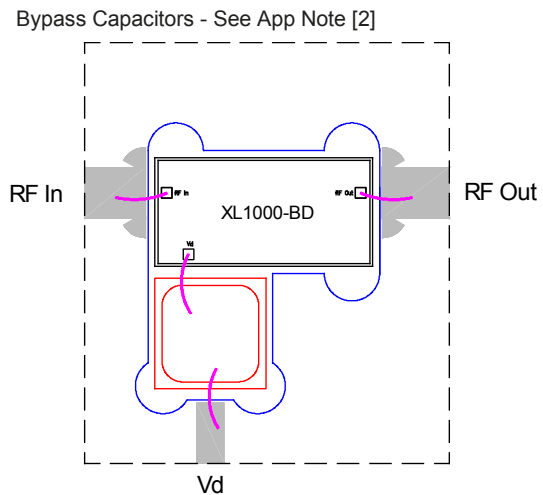

(Note: Engineering designator is 28LN3UA0338)

Units: millimeters (inches) Bond pad dimensions are shown to center of bond pad.
Thickness: 0.110 +/- 0.010 (0.0043 +/- 0.0004), Backside is ground, Bond Pad/Backside Metallization: Gold
All Bond Pads are 0.100 x 0.100 (0.004 x 0.004).
Bond pad centers are approximately 0.109 (0.004) from the edge of the chip.
Dicing tolerance: +/- 0.005 (+/- 0.0002). Approximate weight: 1.239 mg.

Bond Pad #1 (RF In) Bond Pad #2 (RF Out) Bond Pad #3 (Vd) Bond Pad #4 (Vd)

Bias Arrangement

MTTF Graphs

These numbers were calculated based upon accelerated life test information received from the fabricating foundry and extensive thermal modeling/finite element analysis done at M/A-COM Tech. The values shown here are only to be used as a guideline against the end application requirements and only represent reliability information under one bias condition. Ultimately bias conditions and resulting power dissipation along with the practical aspects, i.e. thermal material stack-up, attach method of device placement are the key parts in determining overall reliability for a specific application, see previous pages. If the data shown below does not meet your reliability requirements or if the bias conditions are not within your operating limits please contact technical sales for additional information.

XL1000-BD

Low Noise Amplifier
20.0-40.0 GHz

Rev. V1
MimiX Broadband

App Note [1] Biasing - As shown in the bonding diagram, this device operates using a self-biased architecture and only requires one drain bias. Bias is nominally $V_d=3V$, $I=35mA$ or $V_d=5V$, $I=50mA$.

App Note [2] Bias Arrangement - Each DC pad (V_d) needs to have DC bypass capacitance ($\sim 100-200$ pF) as close to the device as possible. Additional DC bypass capacitance (~ 0.01 uF) is also recommended.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these class 2 devices.
