Revision No.	Date	Page	Description
Ver 1.0	FEB.16, 2004		Model Modify(Add Inverter Reset curcuit) (LC230W02-A5K1=>LC230W02-A5K4)
			Final

1. General Description

The LC230W02 is a Color Active Matrix Liquid Crystal Display with an integral External Electrode Fluorescent Lamp(EEFL) backlight system. The matrix employs a-Si Thin Film Transistor as the active element. It is a transmissive type display operating in the normally black mode. This TFT-LCD has a 23.0 inch diagonally measured active display area with WXGA resolution (768 vertical by 1366 horizontal pixel array). Each pixel is divided into Red,Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the luminance of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,7M(True) colors. The LC230W02 has been designed to apply the LVDS interface. It is intended to support LCD TV, PCTV where high brightness, super wide viewing angle, high color gamut, high color depth, and fast response time are important.

General Features

22.95 inches(582.96mm) diagonal							
559.8(H) x 333.8(V) x 45.2(D) mm(Typ.)							
0.372 mm x 0.124 mm x RGB							
1366 horizontal by 768 vertical pixels. RGB stripe arrangement							
LVDS 1port							
8-bit, 16,777,216 colors							
500 cd/m ² (Center 1 point, Typ.)							
Viewing Angle Free(R/L 176(Typ.), U/D 176(Typ.))							
Total 59.1 Watt(Typ.), (3.9 Watt @V _{LCD} , 55.2 Watt @V _{BL})							
4200 g (Typ.)							
Transmissive mode, normally black							
Hard coating (3H), Anti-glare treatment of the front polarizer							

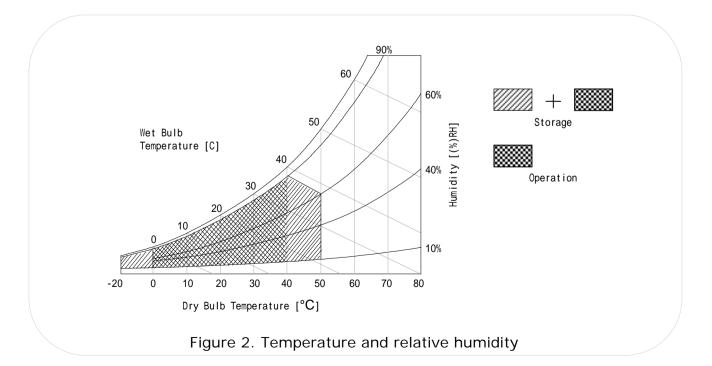

2. Absolute Maximum Ratings

Table 1. Absolute Maximum Ratings

Doromotor	Cymbol	Va	alue	- Unit	Note
Parameter	Symbol	Min	Max	UTIIL	Note
Power Supply	VLCD	-0.3	+14	Vdc	1 .05
Input Voltage	VBL	-0.3	+27	Vdc	At 25
On/Off Control Voltage	ON/OFF	-0.3	+5.25	Vdc	
Brightness Control Voltage	VBR	0	+3.3	Vdc	
Operating Temperature	Тор	0	+40	°C	1
Storage Temperature	Tst	-20	+50	°C	1
Operating Ambient Humidity	Нор	10	90	%RH	1
Storage Humidity	Нѕт	10	90	%RH	1

Note:

1. Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39 °C Max, and no condensation.

3. Electrical Specifications

The LC230W02 requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the EEFL/Backlight, is to power the inverter.

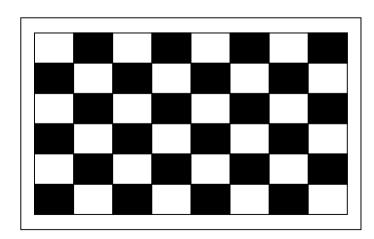

3-1. Electrical Characteristics

Table 2. Electrical Characteristics

Parameter	Symbol		Value	Unit	Note	
r di diffetei	Symbol	Min	Тур	Max	Offit	Note
1. Power for Panel:						
Power Supply Input Voltage	V _{LCD}	11.4	12.0	12.6	Vdc	
Power Supply Input Current	ı	-	325	420	mA	1
Fower Supply Input Current	LCD	_	390	510	mA	2
Power Consumption	P _{LCD}	-	3.90	5.04	Watt	1
Inrush Current (V _{LCD} Input)	I _{RUSH}	_	-	3	Α	3

Notes:

- The specified current and power consumption are under the V_{LCD}=12V, 25°C, fV(frame frequency)=60Hz condition.
 Typical supply current is measured at the condition of 8 X 6 Mosaic pattern(white & black) shown in the [Figure 3] is displayed.
- 2. The current is specified at the maximum current pattern.
- 3. The duration of rush current is about 2ms and rising time of power input is 1ms(min).

[Figure 3]

Mosaic pattern: for power consumption measurement

Table 3. Inverter Electrical Characteristics

Doromotor	Cumbal	Condition		Value		Unit	Note
Parameter	Symbol	Condition	Min	Тур	Max	Unit	
2. Power for Inverter							
Power supply Input Voltage	V_{BL}		22.8	24.0	25.2	Vdc	1
Power supply Input Current	I _{BL}	V_{BR} -B = 3.3V	-	2.3	2.7	Α	1
Power Consumption	P_{BL}	V_{BR} –B =3.3V	-	55.2	64.8	Watt	1
Back-Light	ON/OFF	H (Lamp ON)	2.4	-	5.0	Vdc	
ON/OFF Control voltage	OIN/OI I	L (Lamp OFF)	0.0	-	0.6	Vdc	
Brightness Adj.	VBR		0	-	3.3	Vdc	
Inrush Current (V _{BL} Input)	I _{RUSH}	-	-	-	5	А	2
Lamp Lifetime			50,000		_	Hrs	3

Note:

- 1. The specified current and power consumption are under the typical supply input voltage, 24.0V. The ripple voltage of the power supply input voltage is under 0.5 Vp-p.
- 2. The duration of rush current is about 2ms and rising time of power input is 1ms(min).
- 3. The life is determined as the time at which luminance of the lamp is 50% compared to that of initial value at the typical lamp current on condition of continuous operating at 25 \pm 2°C.

3-2. Interface Connections

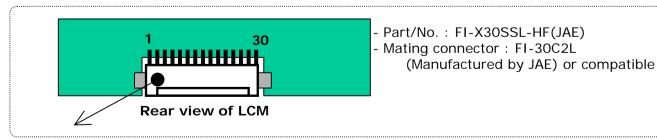

This LCD employs two kinds of interface connections. A 30 pin connector is used for LCD electronics and a 12pin connector is used for the integral backlight system.

3-2-1. Signal Interface

The LCD connector(CN1): FI-X30SSL-HF (Manufactured by JAE) or Equivalent. The pin configuration for the 30 pin connector is shown in the table below.

Table 4. 30Pin Connector pin configuration (For LCD Panel)

Pin	Signal assignment	Pin	Signal assignment
1	V _{LCD} (12V)	16	LVDS SIGNAL CHANNEL 1+
2	V _{LCD} (12V)	17	GND
3	V _{LCD} (12V)	18	LVDS SIGNAL CHANNEL 2-
4	V _{LCD} (12V)	19	LVDS SIGNAL CHANNEL 2+
5	GND	20	GND
6	GND	21	LVDS CLOCK C-
7	GND	22	LVDS CLOCK C+
8	GND	23	GND
9	DISM (Note 1)	24	LVDS SIGNAL CHANNEL 3-
10	NC	25	LVDS SIGNAL CHANNEL 3+
11	GND	26	GND
12	LVDS SIGNAL CHANNEL 0-	27	NC
13	LVDS SIGNAL CHANNEL 0+	28	NC
14	GND	29	GND
15	LVDS SIGNAL CHANNEL 1-	30	GND

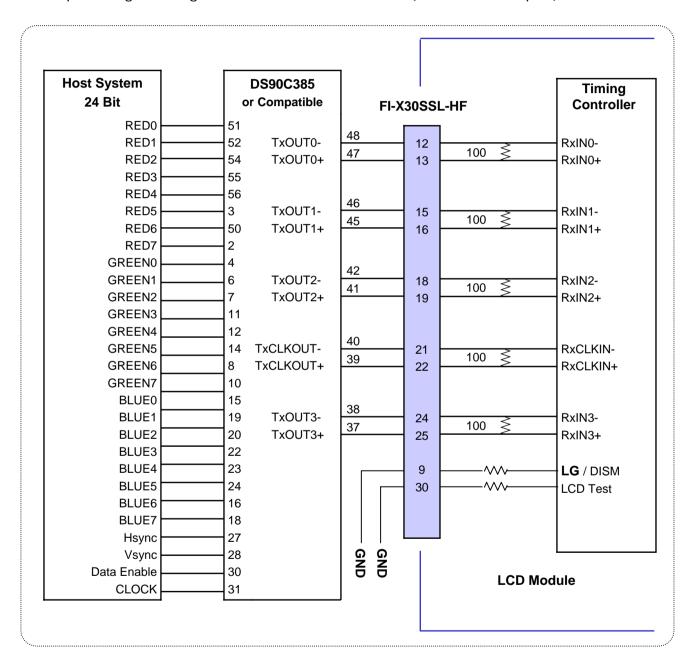

Notes:

- 1. If pin9 is ground, interface format is "LG", and if pin9 is 3.3V, interface format is "DISM. (See page 9~10)
- 2. All GND(ground) pins should be connected together and should also be connected to the LCD's metal frame.
- 3. All power input pins should be connected together.
- 4. Input level of LVDS signal is based on the IEA664 standard.
- 5. The pin30 should be ground, this pin is necessary for LPL's test

Table 5.

Required signal assignment for LVDS transmitter (Pin9 = "L" or open)

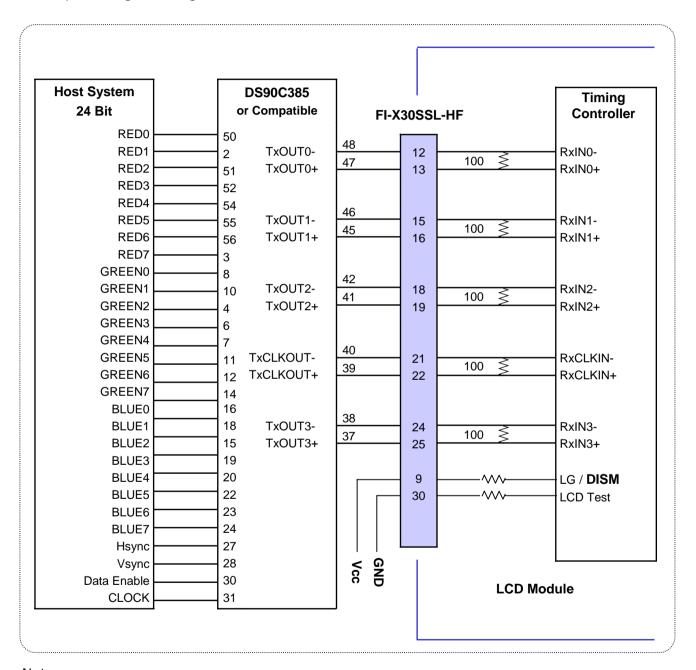

Note:

- 1. The LCD module uses a 100 Ohm() resistor between positive and negative lines of each receiver input.
- 2. Refer to LVDS transmitter data sheet for detail descriptions. (DS90C385 or Compatible)
- 3. '7' means MSB and '0' means LSB at R,G,B pixel data.

Table 6.

Required signal assignment for LVDS transmitter (Pin9 = "H")

Note:

- 1. The LCD module uses a 100 Ohm() resistor between positive and negative lines of each receiver input.
- 2. Refer to LVDS transmitter data sheet for detail descriptions. (DS90C385 or Compatible)
- 3. '7' means MSB and '0' means LSB at R,G,B pixel data.

3-2-2. Inverter Connector for Backlight

The inverter connector is S12B-PH-SM3 (manufactured by JST) or equivalent The pin configuration for the 12 pin connector is shown in the table below.

Table 7. 12Pin Connector Pin Configuration (For Inverter Connector)

Pin	Symbol	Sigr	Signal assignment								
			Master(CN2)	Slave(CN3)							
1	VBL	24V Power Input	VBL	VBL							
2	VBL	24V Power Input	VBL	VBL							
3	VBL	24V Power Input	VBL	VBL							
4	VBL	24V Power Input	VBL	VBL							
5	VBL	24V Power Input	VBL	VBL							
6	GND	GROUND	GND	GND							
7	GND	GROUND	GND	GND							
8	GND	GROUND	GND	GND	1						
9	GND	GROUND	GND	GND							
10	GND	GROUND	GND	GND							
11	VBR-B	Burst dimming	VBR-B	Don't care	0V ~ 3.3V						
12	ON/OFF	Backlight ON/OFF control	ON/OFF	Don't care	ON: 2.4 ~ 5.0V OFF: 0.0 ~ 0.6V						

1. Connector

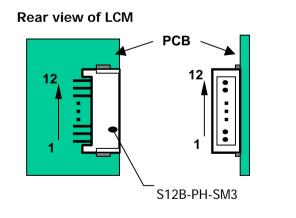

1) Connector(Receptacle)

: S12B-PH-SM3 (JST) or its equivalent

2) Mating Connector(Plug)

: PHR12 (JST) or its equivalent

* JST: Japan solderless Terminal Co., Ltd.

Notes: Pin 1~10 should connect to master and slave connector.

1. GROUND is connected to the LCD's metal frame.

3-3. Signal Timing Specifications

This is the signal timing required at the input of the LVDS transmitter. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

Table 8. Timing Table

	ITEM	SYMBOL	Min.	Тур.	Max.	Unit	Note	
Clock	Period	t _{CLK}	12.5	13.8	14.7	ns		
Clock	Frequency	f _{CLK}	68	72.3	80	MHz		
	Horizontal total	t _{HT}	1416	1528	1776	Pixel		
Hsync	Hsync frequency	f _H	45.0	47.4	50	KHz		
	Hsync width	t _{WH}	8	32	-	Pixel		
	Vertical total	t _{VT}	775	790	1063	Line	PAL:	
Vsync	Vsync frequency	f _V	47	60	63	Hz	47~53Hz, NTSC :	
	Vsync width	t _{wv}	2	5	-	Line	57~63Hz	
	Horizontal valid	t _{HV}	1366	1366	1366			
	Horizontal back porch	t _{HBP}	24	80	-	Pixel		
	Horizontal front porch	t _{HFP}	16	48	-	Pixei		
DE	Horizontal blank	-	48	160	tHP- tHV			
DE	Vertical valid	t _{vv}	768	768	768			
	Vertical back porch	t _{VBP}	4	15	-	Line		
	Vertical front porch	t _{VFP}	1	2	-	LINE		
	Vertical blank	-	7	22	tvp- tvv			

Note:

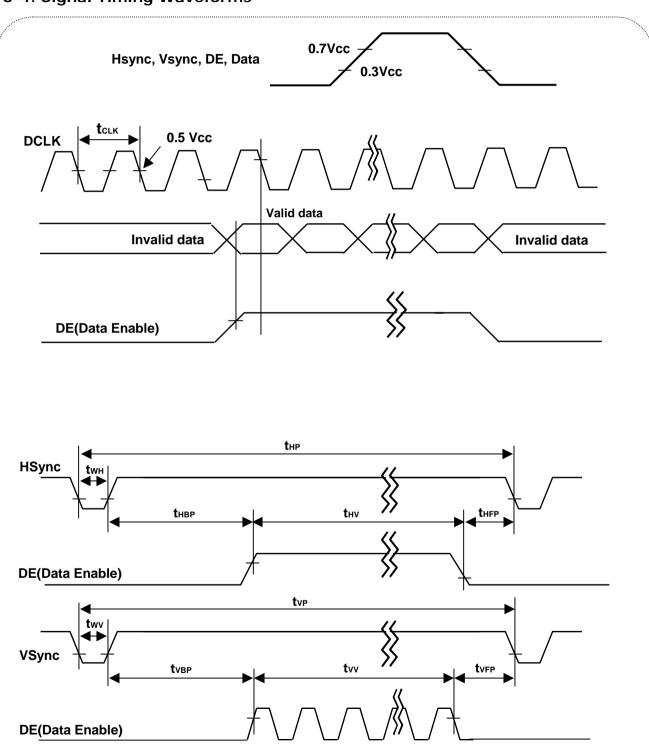

Hsync period and Hsync width-active should be even number times of tCLK. If the value is odd number times of tCLK, display control signal can be asynchronous.

In order to operate this LCM a Hsync., Vsync and DE(data enable) signals should be used.

- 1. The performance of the electro-optical characteristics are may be influenced by variance of the vertical refresh rates.
- 2. Vsync, Hsync should be keep the above specification.

3-4. Signal Timing Waveforms

3-5. Color Input Data Reference

The brightness of each primary color (red,green and blue) is based on the 8-bit gray scale data input for the color; the higher the binary input, the brighter the color.

The table below provides a reference for color versus data input.

Table 9. Color Data Reference

Tab	Color		. 0.	enc							Inj	put	Со	lor	Da	ıta

Т3	200	-	-	ms	
T4	200	-	-	ms	
T5	0.01	-	50	ms	
T6	2000	-	-	ms	

Notes:

- 1. Please avoid floating state of interface signal at invalid period.
- 2. When the interface signal is invalid, be sure to pull down the power supply for LCD $V_{\rm LCD}$ to OV.
- 3. Lamp power must be turn on after power supply for a LCD interface signal are valid.
- 4. To should be measured after the module has been fully discharged between power off and on period.

3-6-2. Sequence for Inverter

3-6-3. Deep condition for Inverter

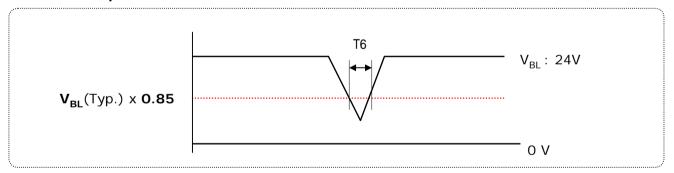

Table 11. Power Sequence for Inverter

T5	10	-	-	ms								
Т6	-	-	10	ms								

4. Optical Specification

Optical characteristics are determined after the unit has been 'ON' for 30Min in a dark environment at 25±2°C. The values specified are at an approximate distance 50cm from the LCD surface at a viewing angle of Φ and θ equal to 0°.

FIG. 4 presents additional information concerning the measurement equipment and method.

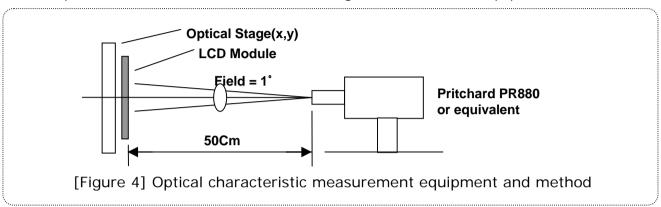

Table 12. Optical characteristics (Ta=25±2°C, V_{LCD} =12V, f_V =60Hz, CLK=72.3MHz, V_{BR} =3.3V)

y axis, up (ϕ =90°)		θu	85	89	-		
y axis	s, down (φ=270°)	θd	85	89	-		
Gray scale	5						6

Note:

1. Contrast ratio(CR) is defined mathematically as:

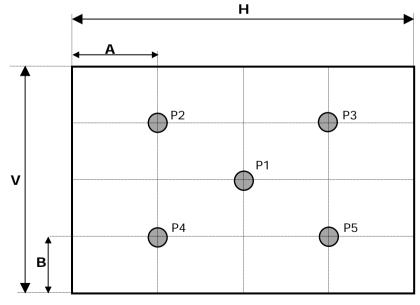

It is measured at center point(1)

- 2. Surface luminance(L_{WH}) is luminance value at center point (P1) across the LCD surface 50cm from the surface with all pixels displaying white.
- 3. The variation in surface luminance , δ $_{\text{WHITE}}$ is defined as

```
\delta WHITE = Maximum (P1,P2, ....,P5) / Minimum (P1,P2, ....,P5)
```

For more information see [Figure 5].

<Measuring point for surface luminance and luminance variation>

A: H / 4 mm B: V / 4 mm H: 508.152 mm V: 285.696 mm @ H,V: Active Area

Figure 5. Luminance measuring point

4. The response time is defined as the following figure and shall be measured by switching the input signal for "Black" and "White".

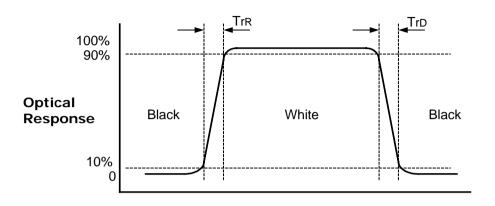

Figure 6. Response time

5. Viewing angle is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see Figure 7.

<Dimension of viewing angle range>

5. Serial No

Serial No.	1 ~ 99,999	100,000 ~
Mark	00001 ~ 99999	A0001 ~ A9999, , Z9999

8-2. Packing Form

a) Package quantity in one box: 4 pcs

b) Box size: 439mm X 350mm X 665mm.

9. Precautions

Please pay attention to the following when you use this TFT LCD module.

9-1. Mounting Precautions

- (1) You must mount a module using holes arranged in side and rear.
- (2) You should consider the mounting structure so that uneven force(ex. twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach a transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to the resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not describe because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer with bare hand or greasy cloth. (Some cosmetics are determined to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.

9-2. Operating Precautions

- (1) The spike noise causes the mis-operation of circuits. It should be lower than following voltage: $V = \pm 200 \text{mV}$ (Over and under shoot voltage)
- (2) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- (3) Brightness depends on the temperature. (In lower temperature, it becomes lower.) And in lower temperature, response time(required time that brightness is stable after turned on)becomes longer.
- (4) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (5) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- (6) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (7) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can not be operated its full characteristics perfectly.
- (8) A screw which is fastened up the steels should be a machine screw (if not, it causes metal foreign material and deals LCM a fatal blow)
- (9) Please do not set LCD on its edge.

9-3. Electrostatic Discharge Control

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- (1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.

9-6. Handling Precautions for Protection Film

- (1) The protection film is attached to the bezel with a small masking tape.

 When the protection film is peeled off, static electricity is generated between the film and polarizer.
 - This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- (2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the Bezel after the protection film is peeled off.
- (3) You can remove the glue easily. When the glue remains on the Bezel or its vestige is recognized,
 - please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
