Data Sheet

Description/Applications

These general purpose switching diodes are intended for low power switching applications such as RF duplexers, antenna switching matrices, digital phase shifters, and time multiplex filters. The 5082-3188 is optimized for VHF/UHF bandswitching.

The RF resistance of a PIN diode is a function of the current flowing in the diode. These current controlled resistors are specified for use in control applications such as variable RF attenuators, automatic gain control circuits, RF modulators, electrically tuned filters, analog phase shifters, and RF limiters.

Outline 15 diodes are available on tape and reel. The tape and reel specification is patterned after RS-296-D.

Features

- Low Harmonic Distortion
- Large Dynamic Range
- Low Series Resistance
- Low Capacitance

DIMENSIONS IN MILLIMETERS AND (INCHES).

Outline 15

Maximum Ratings

Junction Operating and Storage Temperature Range	-65°C to +150°C
Power Dissipation 25°C	250 mW
<i>(Derate linearly to zero at 150°C)</i>	
Peak Inverse Voltage (PIV)	same as V_{BR}
Maximum Soldering Temperature	260°C for 5 sec

Mechanical Specifications

The Agilent Outline 15 package has a glass hermetic seal with dumet leads. The lead finish is 95-5 tin-lead (SnPb) for all PIN

diodes. The leads on the Outline 15 package should be restricted so that the bend starts at least 1/16 inch (1.6 mm) from the glass body. Typical package inductance and capacitance are 2.5 nH and

0.13 pF, respectively. Marking is by digital coding with a cathode band.

Notes:

Typical CW power switching capability for a shunt switch in a 50 Ω system is 2.5 W.

Diode Package Marking

1N5xxx 5082-xxxx

would be marked:

1Nx xx
xxx xx
YWW YWW

where xxxx are the last four digits of the 1Nxxxx or the 5082-xxxx part number. Y is the last digit of the calendar year. WW is the work week of manufacture.

Examples of diodes manufactured during workweek 45 of 1999:

1N5712 5082-3080

would be marked:

1N5 30
712 80
945 945
