NOTE 1 The electrical characteristics are measured after allowing the device to stabilize for 90 seconds with 3/8 inch MIL spacing between test clips and case. Temperature coefficient is measured with the device in a circulating oil bath with a temperature tolerance of ±1°C.

NOTE 2 Measured by superimposing 0.1 mA ac rms on 10 mA DC @ 25°C.

NOTE 3 The maximum allowable change observed over the entire range i.e., the change in diode voltage will not exceed the specified mV change between any two discrete temperatures over the specified temperature range.
