

# BEAGLEBONE DVI-D CAPE

## FEATURES:

-  21 pins reserved for DVI-D interface
-  16-bit color output
-  Two user LEDs
-  HDMI connector for smaller size
-  Cutbacks for BeagleBone Ethernet connector

The DVI-D cape provides a DVI-D interface for BeagleBone boards. This cape features a standard HDMI connector, which can be connected to a DVI-D monitor using a HDMI-to-DVI-D cable. Only 21 signals are reserved by the BeagleBone DVI-D; therefore, more pins are available for other capes. In addition to five control pins, 16 LCD data signals are used to provide a 16-bit color output. There are also two LED indicators. Cutbacks are made for Ethernet connector so the BeagleBone DVI-D cape can fit perfectly on the BeagleBone board.
