

- Quartz SAW Stabilized Differential Output Technology
- Very Low Jitter Fundamental-Mode Operation at 666.51 MHz
- Voltage Tunable for Phase Locked Loop Applications
- Optical Timing Reference for Forward Error Correction Applications
- Complies with Directive 2002/95/EC (RoHS)

CAUTION: Electrostatic Sensitive Device. Observe precautions for handling.

COCOM CAUTION: Approval by the U.S. Department of Commerce is required prior to export of this device.

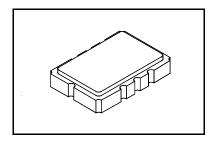

Notes:

- 1. Unless otherwise noted, all specifications include the combined effects of load VSWR, V_{CC} and T_C.
- 2. Net tuning range after tuning out the effects of initial manufacturing tolerances, VSWR pushing/pulling, V_{CC} , T_{C} and aging.
- 3. The internal design, manufacturing processes, and specifications of this device are subject to change without notice.
- 4. Specified only for a balanced load with a VSWR < 1.2 (50 ohms each side), and a V_{CC} = 3.0 Vdc.
- 5. Symmetry is defined as the width in (% of total period) measure at 50% of the peak-to-peak voltage of either output.
- 6. Jitter and other noise outputs due to power supply noise or mechanical vibration are not included in this specification except where noted.
- 7. Applies to period jitter of either differential output. Measured with a Tektronix CSA803 signal analyzer with at least 1000 samples.
- One or more of the following United States patents apply: 4, 616,197; 4,670,681; 4,760,352.
