CCB LC75839PW — 1/4 and 1/3-Duty General-Purpose LCD Display Driver

Overview

The LC75839PW is 1/4 duty and 1/3 duty general-purpose microprocessor-controlled LCD driver that can be used in applications such as frequency display in products with electronic tuning. In addition to being able to drive up to 208 segments directly, the LC75839PW can also control up to 4 general-purpose output ports. Because it has the PWM output of a maximum of 3 ch, the brightness control of the LED backlight of RGB can be done. Incorporation of an oscillation circuit helps to reduce the number of external resistors and capacitors required.

Features

- Support for 1/4-duty 1/3-bias or 1/3-duty 1/3-bias drive techniques under serial data control.
 - When 1/4-duty: Capable of driving up to 208 segments
 - When 1/3-duty: Capable of driving up to 159 segments
- Serial data input supports CCB format communication with the system controller. (Support 3.3V and 5V operation)
- Serial data control of the power-saving mode based backup function and the all segments forced off function.
- Serial data control of switching between the segment output port and general-purpose output port function. (Support for up to 4 general-purpose output ports)
- Support for the PWM output function of a maximum of 3ch. (It can output from the general-purpose output port).
- Support for clock output function of 1ch.
- Serial data control of the frame frequency of the common and segment output waveforms.
- Serial data control of switching between the internal oscillator operating mode and external clock operating mode.
- High generality, since display data is displayed directly without the intervention of a decoder circuit.
- The INH pin allows the display to be forced to the off state.
- Incorporation of an oscillator circuit. (Incorporation of resistor and capacitor for an oscillation)

- CCB is a registered trademark of SANYO Semiconductor Co., Ltd.
- CCB is SANYO Semiconductor's original bus format. All bus addresses are managed by SANYO Semiconductor for this format.

- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.
- Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

Specifications

Absolute Maximum Ratings at $T_a = 25^\circ\text{C}$, $V_{SS} = 0\text{V}$

Parameter	Symbol	Conditions	Ratings	Unit

- W30 to W35

Serial Data Transfer Example

1. 1/4 duty

- When 153 or more segments are used
All 288 bits of serial data must be sent.

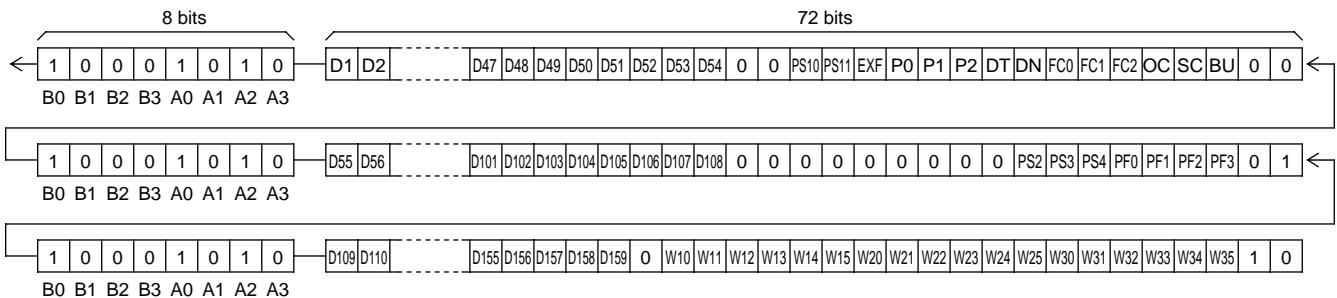

- When fewer than 153 segments are used 216 bits of serial data shown below (the D1 to D152 display data and the control data) must always be sent.

2. 1/3 duty

All 216 bits of serial data must be sent.

Control Data Functions

(1) PS10 and PS11, PS2 to PS4 ... General-purpose output port (P1 to P4) function setting control data

These control data bits set the general-purpose output function (High or low level output), clock output function or PWM output function of the P1 output pin, and the general-purpose output function (High or low level output) or PWM output function of the P2 to P4 output pins.

However, be careful of being unable to set a PWM output function when the external clock operating frequency is set the $f_{CK2}=38[\text{kHz}]$ typ (EXF="1") in external clock operating mode (OC= "1").

PS10	PS11	General-purpose output port (P1) function
0	0	General-purpose output function (High or low level output)
1	0	Clock output function (Clock frequency : $f_{osc}/2, f_{CK}/2$)
0	1	Clock output function (Clock frequency : $f_{osc}/8, f_{CK}/8$)
1	1	PWM output function (Support for PWM data W10 to W15)

PS2	General-purpose output port (P2) function
0	General-purpose output function (High or low level output)
1	PWM output function (Support for PWM data W20 to W25)

PS3	General-purpose output port (P3) function
0	General-purpose output function (High or low level output)
1	PWM output function (Support for PWM data W30 to W35)

PS4	General-purpose output port (P4) function
0	General-purpose output function (High or low level output)
1	PWM output function (Support for PWM data W10 to W15)

(2) EXF ... External clock operating frequency setting control data

This control data sets the operating frequency of the external clock which input into the OSCI pin, when the external clock operating mode (OC="1") is set. However, this control data is effective only when external clock operating mode (OC= "1") is set.

EXF	External clock operating frequency $f_{CK}[\text{kHz}]$
0	$f_{CK1}=300[\text{kHz}]$ typ
1	$f_{CK2}=38[\text{kHz}]$ typ

LC75839PW

(3) P0 to P2 ... Segment output port/general-purpose output port switching control data

These control data bits switch the segment output port/general-purpose output port functions of the S1/P1 to S4/P4 output pins.

Control data			Output pin state			
P0	P1	P2	S1/P1	S2/P2	S3/P3	S4/P4
0	0	0	S1	S2	S3	S4
0	0	1	P1	S2	S3	S4
0	1	0	P1	P2	S3	S4
0	1	1	P1	P2	P3	S4
1	0	0	P1	P2	P3	P4

Note: Sn (n=1 to 4): Segment output ports
Pn (n=1 to 4): General-purpose output ports

Note: When are setting (P0,P1,P2)=(1,0,1), (1,1,0), and (1,1,1), the all P1/S1 to P4/S4 output pins selects the segment output port.

The table below lists the correspondence between the display data and the output pins when these pins are selected to be general-purpose output ports.

Output pin	Correspondence display data	
	1/4 duty	1/3 duty
S1/P1	D1	D1
S2/P2	D5	D4
S3/P3	D9	D7
S4/P4	D13	D10

For example, if the circuit is operated in 1/4 duty and the S4/P4 output pin is selected to be a general-purpose output port, the S4/P4 output pin will output a high level when the display data D13 is 1, and will output a low level when D13 is 0.

(4) DT ... 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive switching control data

This control data bit selects either 1/4-duty 1/3-bias drive or 1/3-duty 1/3-bias drive.

DT	Drive scheme	The COM4/S51 pin state
0	1/4-duty 1/3-bias drive	COM4
1	1/3-duty 1/3-bias drive	S51

Note: COM4: Common output
S51 : Segment output

(5) DN ... S52 pin and S53/OSCI pin state setting control data

This control data bit sets state of the S52 pin and the S53/OSCI pin.

DN	Number of display segments		Pin state	
	1/4 duty	1/3 duty	S52	S53/OSCI
0	Up to 200 segments	Up to 153 segments	"L" (V _{SS})	"L" (V _{SS})/OSCI
1	Up to 208 segments	Up to 159 segments	S52	S53/OSCI

Note: "L" (V_{SS}) : Low (V_{SS}) level output

S52 : Segment output

"L" (V_{SS})/OSCI : Low (V_{SS}) level output in internal oscillator operating mode (OC=0)

: External clock input in external clock operating mode (OC=1)

S53/OSCI : Segment output in internal oscillator operating mode (OC=0)

: External clock input in external clock operating mode (OC=1)

LC75839PW

(6) FC0 to FC2 ... Common/segment output waveform fram frequency control data

These control data bits set the frame frequency of the common and segment output waveforms.

Control data			Frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 0, f _{CK} 1=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 1, f _{CK} 2=38[kHz]typ)
0	0	0	fosc/6144	f _{CK} 1/6144	f _{CK} 2/768
0	0	1	fosc/4608	f _{CK} 1/4608	f _{CK} 2/576
0	1	0	fosc/3072	f _{CK} 1/3072	f _{CK} 2/384
0	1	1	fosc/2304	f _{CK} 1/2304	f _{CK} 2/288
1	0	0	fosc/1536	f _{CK} 1/1536	f _{CK} 2/192
1	0	1	fosc/1152	f _{CK} 1/1152	f _{CK} 2/144
1	1	0	fosc/768	f _{CK} 1/768	f _{CK} 2/96

Note: When is setting (FC0,FC1,FC2)=(1,1,1), the frame frequency is same as frame frequency at the time of the (FC0,FC1,FC2)=(0,1,0) setting (fosc/3072, f_{CK}1/3072, f_{CK}2/384).

(7) OC ... Internal oscillator operating mode/external clock operating mode switching control data

This control data bit selects either the internal oscillator operating mode or external clock operating mode.

OC	Fundamental clock operating mode	I/O pin (S53/OSCI) state
0	Internal oscillator operating mode	S53
1	External clock operating mode	OSCI

Note: S53: Segment output

OSCI: External clock input

(8) SC ... Segment on/off control data

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

Note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

(9) BU ... Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

BU	Mode
0	Normal mode
1	Power saving mode In this mode, the internal oscillator circuit stops oscillation (the S53/OSCI pin is configured for segment output) if the IC is in the internal oscillator operating mode (OC=0) and the IC stops receiving external clock signals (the S53/OSCI pin is configured for external clock input) if the IC is in the external clock operating mode (OC=1). The common and segment output pins go to the V _{SS} level. However, the S1/P1 to S4/P4 output pins can be used as general-purpose output ports under the control of the data bits P0 to P2. (The general-purpose output port P1 to P4 can not be used as clock output or PWM output.)

LC75839PW

(10) PF0 to PF3 ... PWM output waveform frame frequency setting control data

These control data bits set the frame frequency of the PWM output waveforms. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the $f_{CK2}=38[\text{kHz}]\text{typ}$ ($\text{EXF}=\text{"1"}$) in external clock operating mode ($\text{OC}=\text{"1"}$), these control data bits become invalid.

Control data				PWM output waveform frame frequency $f_p[\text{Hz}]$	
PF0	PF1	PF2	PF3	Internal oscillator operating mode (The control data OC is 0, $f_{osc}=300[\text{kHz}] \text{ typ}$)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK1}=300[\text{kHz}] \text{ typ}$)
0	0	0	0	$f_{osc}/1536$	$f_{CK1}/1536$
1	0	0	0	$f_{osc}/1408$	$f_{CK1}/1408$
0	1	0	0	$f_{osc}/1280$	$f_{CK1}/1280$
1	1	0	0	$f_{osc}/1152$	$f_{CK1}/1152$
0	0	1	0	$f_{osc}/1024$	$f_{CK1}/1024$
1	0	1	0	$f_{osc}/896$	$f_{CK1}/896$
0	1	1	0	$f_{osc}/768$	$f_{CK1}/768$
1	1	1	0	$f_{osc}/640$	$f_{CK1}/640$
0	0	0	1	$f_{osc}/512$	$f_{CK1}/512$
1	0	0	1	$f_{osc}/384$	$f_{CK1}/384$
0	1	0	1	$f_{osc}/256$	$f_{CK1}/256$

Note: When is setting $(\text{PF0}, \text{PF1}, \text{PF2}, \text{PF3})=(1, 1, 0, 1)$ and $(X, X, 1, 1)$, the frame frequency is same as frame frequency at the time of the $(\text{PF0}, \text{PF1}, \text{PF2}, \text{PF3})=(1, 0, 1, 0)$ setting ($f_{osc}/896, f_{CK1}/896$).

X: don't care

LC75839PW

(11) W10 to W15, W20 to W25, W30 to W35 ... PWM data of the PWM output

These control data bits set the pulse width of the PWM output P1 to P4. However, when the PWM output function isn't used, these control data bits become invalid. In addition, when the external clock operating frequency is set the $f_{CK2}=38[\text{kHz}]_{\text{typ}}$ ($\text{EXF}=\text{"1"}$) in external clock operating mode ($\text{OC}=\text{"1"}$), these control data bits become invalid.

Wn0	Wn1	Wn2	Wn3	Wn4	Wn5	Pulse width of PWM output
0	0	0	0	0	0	$(1/64) \times T_p$
1	0	0	0	0	0	$(2/64) \times T_p$
0	1	0	0	0	0	$(3/64) \times T_p$
1	1	0	0	0	0	$(4/64) \times T_p$
0	0	1	0	0	0	$(5/64) \times T_p$
1	0	1	0	0	0	$(6/64) \times T_p$
0	1	1	0	0	0	$(7/64) \times T_p$
1	1	1	0	0	0	$(8/64) \times T_p$
0	0	0	1	0	0	$(9/64) \times T_p$
1	0	0	1	0	0	$(10/64) \times T_p$
0	1	0	1	0	0	$(11/64) \times T_p$
1	1	0	1	0	0	$(12/64) \times T_p$
0	0	1	1	0	0	$(13/64) \times T_p$

Note: This table assumes that pins S1/P1 to S4/P4, S51/COM4, and S53/OSCI are configured for segment output.

For example, the table below lists the output states for the S21 output pin.

Display data			Output pin (S21) state
D61	D62	D63	
0	0	0	The LCD segments corresponding to COM1, COM2, and COM3 are off.
0	0	1	The LCD segment corresponding to COM3 is on.
0	1	0	The LCD segment corresponding to COM2 is on.
0	1	1	The LCD segments corresponding to COM2 and COM3 are on.
1	0	0	The LCD segment corresponding to COM1 is on.
1	0	1	The LCD segments corresponding to COM1 and COM3 are on.
1	1	0	The LCD segments corresponding to COM1 and COM2 are on.
1	1	1	The LCD segments corresponding to COM1, COM2, and COM3 are on.

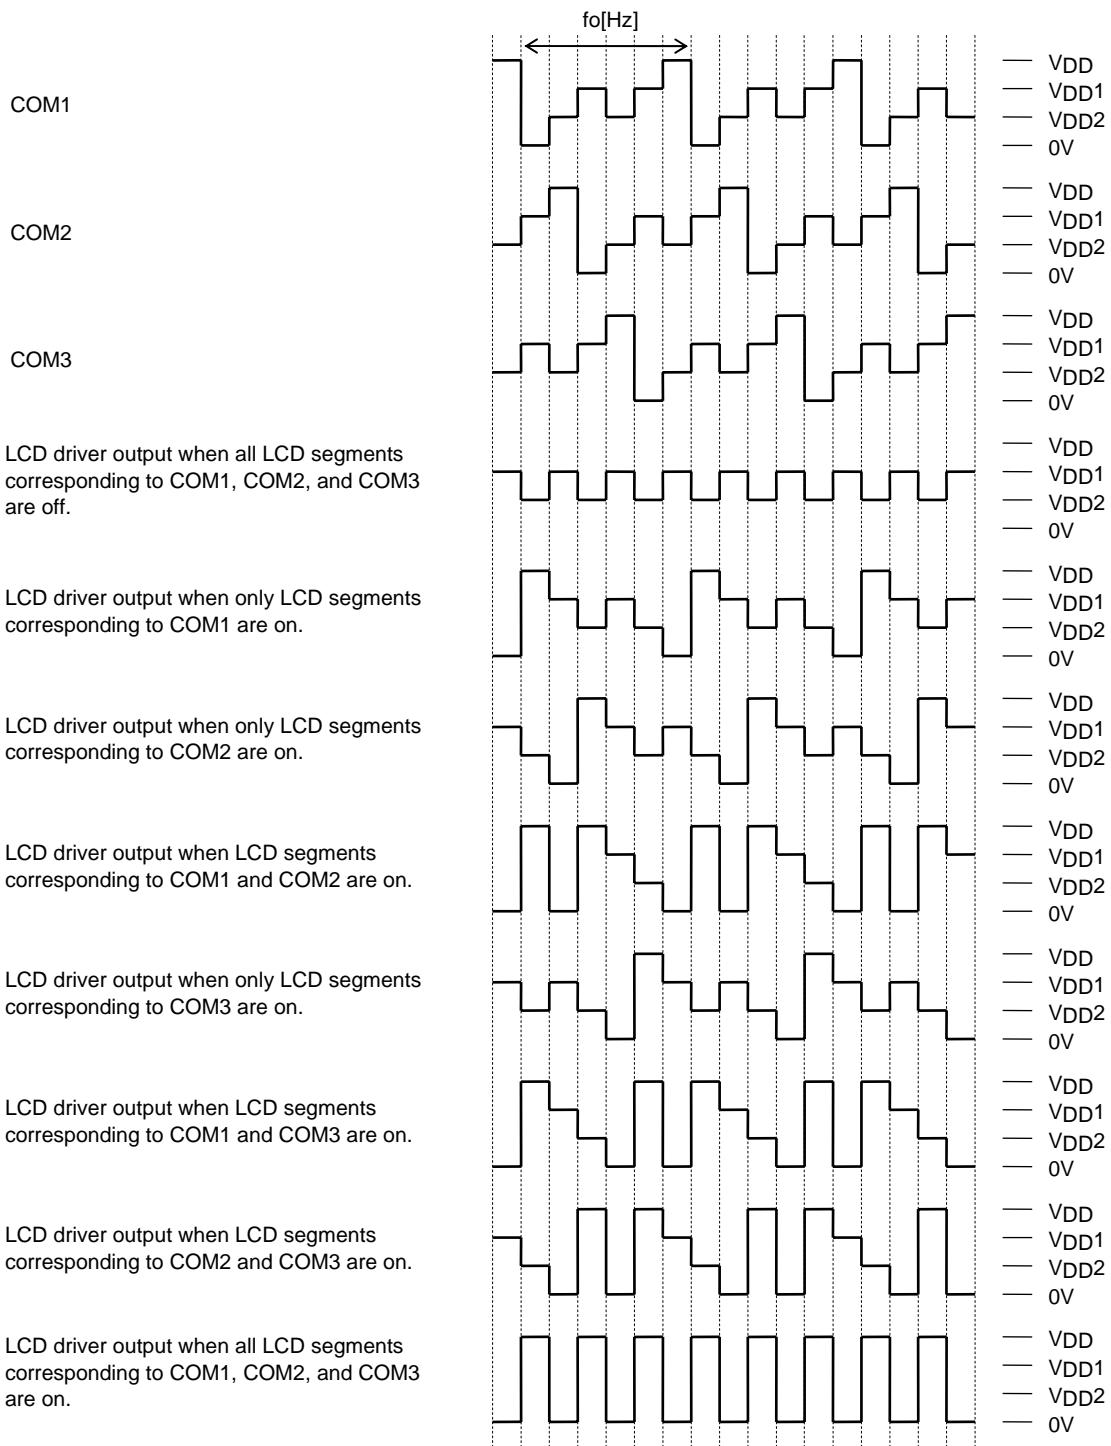

Output waveforms (1/4-Duty 1/3-Bias Drive Scheme)

Control data			Frame frequency fo[Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 0, f _{CK1} =300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 1, f _{CK2} =38[kHz]typ)
0	0	0	fosc/6144	f _{CK1} /6144	f _{CK2} /768
0	0	1	fosc/4608	f _{CK1} /4608	f _{CK2} /576
0	1	0	fosc/3072	f _{CK1} /3072	f _{CK2} /384
0	1	1	fosc/2304	f _{CK1} /2304	f _{CK2} /288
1	0	0	fosc/1536	f _{CK1} /1536	f _{CK2} /192
1	0	1	fosc/1152	f _{CK1} /1152	f _{CK2} /144
1	1	0	fosc/768	f _{CK1} /768	f _{CK2} /96

Note: When is setting $(FC0,FC1,FC2)=(1,1,1)$, the frame frequency is same as frame frequency at the time of the $(FC0,FC1,FC2)=(0,1,0)$ setting ($fosc/3072$, $fCK1/3072$, $fCK2/384$).

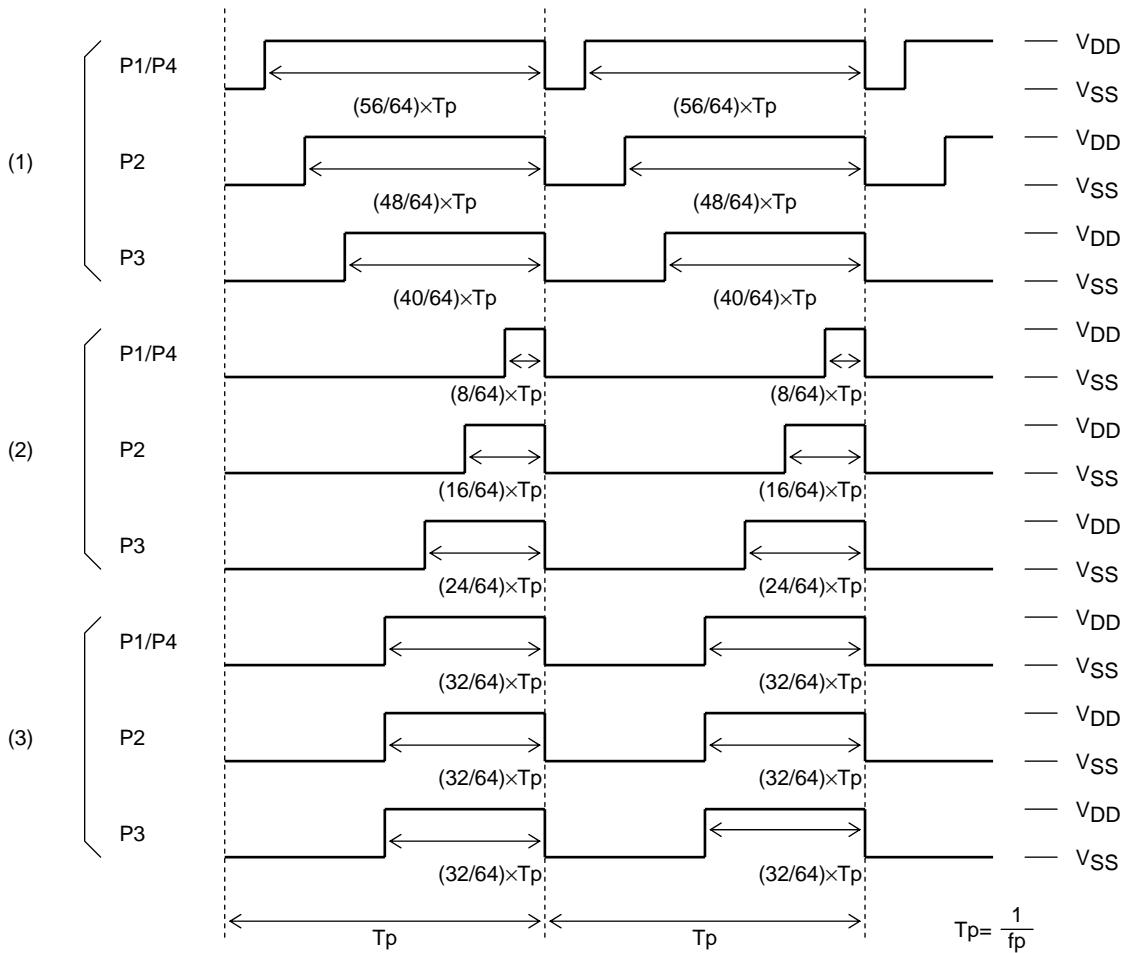

Output waveforms (1/3-Duty 1/3-Bias Drive Scheme)

Control data			Frame frequency f_o [Hz]		
FC0	FC1	FC2	Internal oscillator operating mode (The control data OC is 0, fosc=300[kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 0, $f_{CK1}=300$ [kHz]typ)	External clock operating mode (The control data OC is 1 and EXF is 1, $f_{CK2}=38$ [kHz]typ)
0	0	0	fosc/6144	$f_{CK1}/6144$	$f_{CK2}/768$
0	0	1	fosc/4608	$f_{CK1}/4608$	$f_{CK2}/576$
0	1	0	fosc/3072	$f_{CK1}/3072$	$f_{CK2}/384$
0	1	1	fosc/2304	$f_{CK1}/2304$	$f_{CK2}/288$
1	0	0	fosc/1536	$f_{CK1}/1536$	$f_{CK2}/192$
1	0	1	fosc/1152	$f_{CK1}/1152$	$f_{CK2}/144$
1	1	0	fosc/768	$f_{CK1}/768$	$f_{CK2}/96$

Note: When setting (FC0,FC1,FC2)=(1,1,1), the frame frequency is same as frame frequency at the time of the (FC0,FC1,FC2)=(0,1,0) setting (fosc/3072, $f_{CK1}/3072$, $f_{CK2}/384$).

PWM output waveforms

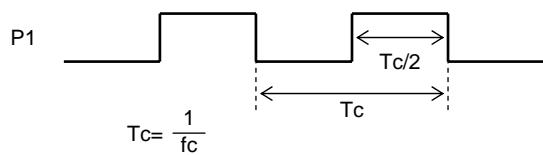

Control data																	PWM output waveforms	
W10	W11	W12	W13	W14	W15	W20	W21	W22	W23	W24	W25	W30	W31	W32	W33	W34	W35	
1	1	1	0	1	1	1	1	1	1	0	1	1	1	1	0	0	1	(1)
1	1	1	0	0	0	1	1	1	1	0	0	1	1	1	0	1	0	(2)
1	1	1	1	1	0	1	1	1	1	1	0	1	1	1	1	1	0	(3)

Control data					PWM output waveform frame frequency $f_p[\text{Hz}]$											
PF0	PF1	PF2	PF3		Internal oscillator operating mode (The control data OC is 0, $f_{osc}=300[\text{kHz}]$ typ)					External clock operating mode (The control data OC is 1 and $EXF=0, f_{CK1}=300[\text{kHz}]$ typ)						
0	0	0	0		$f_{osc}/1536$					$f_{CK1}/1536$						
1	0	0	0		$f_{osc}/1408$					$f_{CK1}/1408$						
0	1	0	0		$f_{osc}/1280$					$f_{CK1}/1280$						
1	1	0	0		$f_{osc}/1152$					$f_{CK1}/1152$						
0	0	1	0		$f_{osc}/1024$					$f_{CK1}/1024$						
1	0	1	0		$f_{osc}/896$					$f_{CK1}/896$						
0	1	1	0		$f_{osc}/768$					$f_{CK1}/768$						
1	1	1	0		$f_{osc}/640$					$f_{CK1}/640$						
0	0	0	1		$f_{osc}/512$					$f_{CK1}/512$						
1	0	0	1		$f_{osc}/384$					$f_{CK1}/384$						
0	1	0	1		$f_{osc}/256$					$f_{CK1}/256$						

Note: When setting $(PF0, PF1, PF2, PF3) = (1, 1, 0, 1)$ and $(X, X, 1, 1)$, the frame frequency is same as frame frequency at the time of the $(PF0, PF1, PF2, PF3) = (1, 0, 1, 0)$ setting ($f_{osc}/896, f_{CK1}/896$). X: don't care

LC75839PW

Clock output waveforms

$$T_c = \frac{1}{f_c}$$

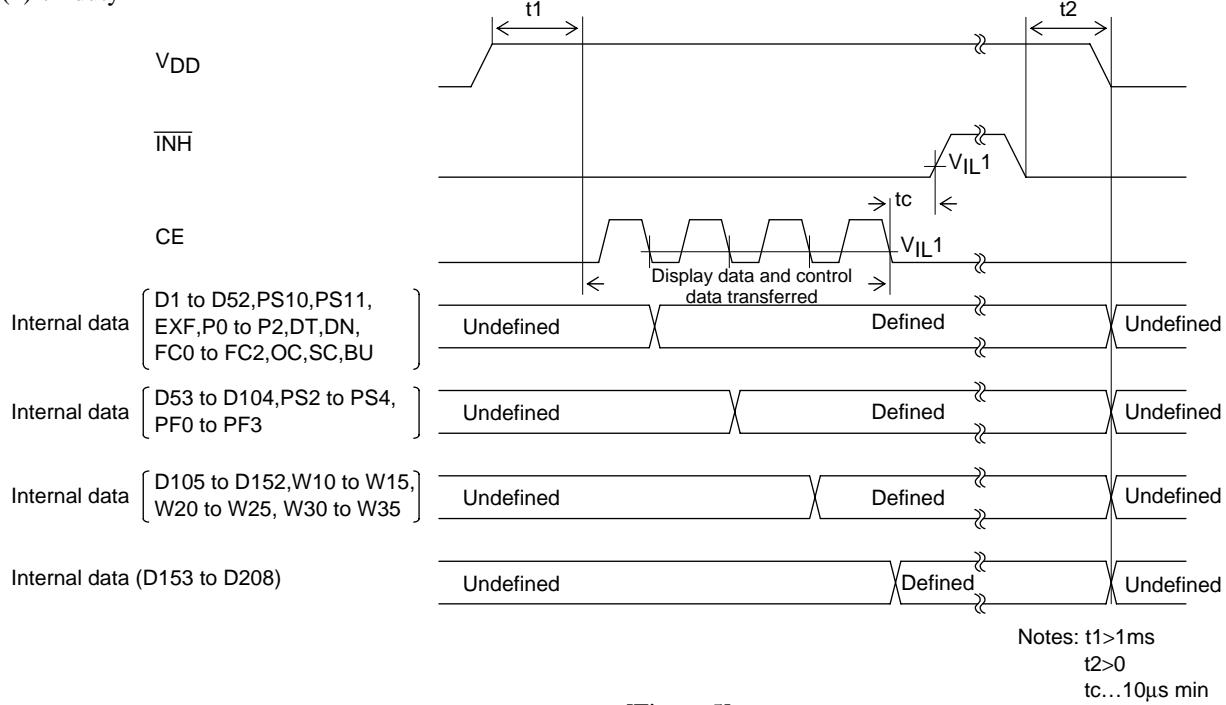

Control data		Clock frequency of clock output P1 $f_c (=1/T_c)$ [Hz]
PS10	PS11	Clock output function ($f_{osc}/2, f_{CK}/2$)
1	0	Clock output function ($f_{osc}/2, f_{CK}/2$)
0	1	Clock output function ($f_{osc}/8, f_{CK}/8$)

Display Control and the INH Pin

Since the LSI internal data (1/4 duty : the display data D1 to D208 and the control data, 1/3 duty : the display data D1 to D159 and the control data) is undefined when power is first applied, applications should set the INH pin low at the same time as power is applied to turn off the display (This sets the S1/P1 to S4/P4, S5 to S50, COM1 to COM3, COM4/S51, S52, and S53/OSCI pins to the V_{SS} level.) and during this period send serial data from the controller. The controller should then set the INH pin high after the data transfer has completed. This procedure prevents meaningless display at power on.

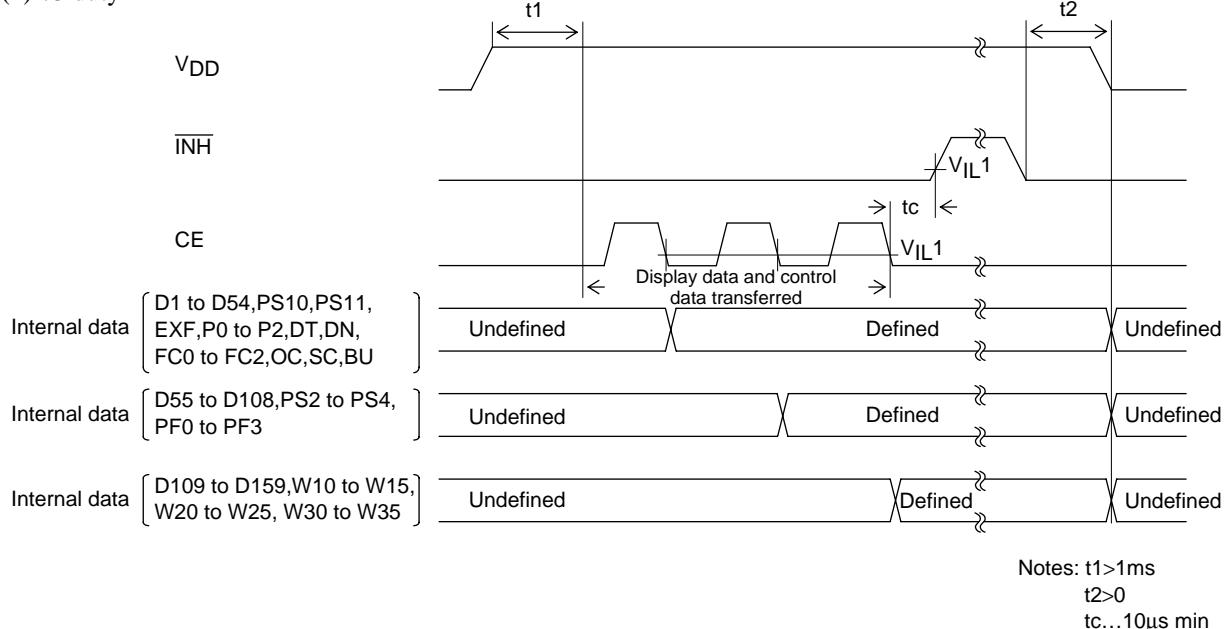

(See Figure 5, Figure 6.)

(1)1/4 duty

[Figure 5]

(2)1/3 duty

[Figure 6]

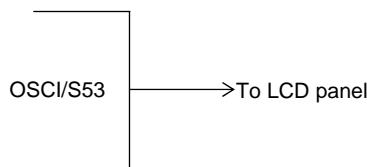

Notes on Controller Transfer of Display Data

When using the LC75839 in 1/4 duty, applications transfer the display data (D1 to D208) in four operations, and in 1/3 duty, they transfer the display data (D1 to D159) in three operations. In either case, applications should transfer all of the display data within 30 ms to maintain the quality of displayed image.

S53/OSCI Pin Peripheral Circuit

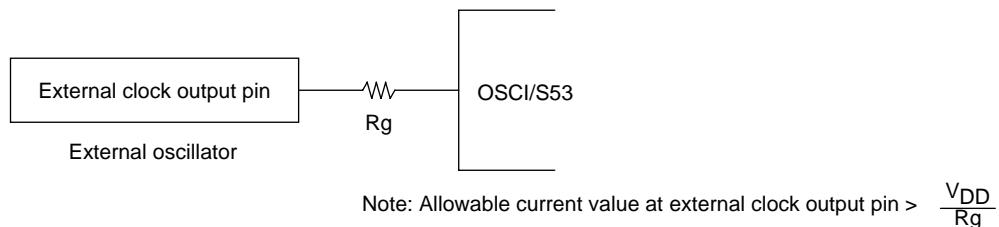

- (1) Internal oscillator operating mode (control data OC=0)

Connect the S53/OSCI pin to the LCD panel when the internal oscillator operating mode is selected.

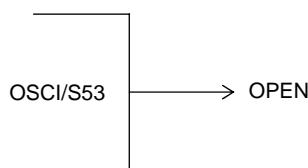

- (2) External clock operating mode (control data OC=1)

When the external clock operating mode is selected, insert a current protection resistor R_g (2.2 to 22k Ω) between the S53/OSCI pin and external clock output pin (external oscillator). Determine the value of the resistance according to the allowable current value at the external clock output pin. Also make sure that the waveform of the external clock is not heavily distorted.

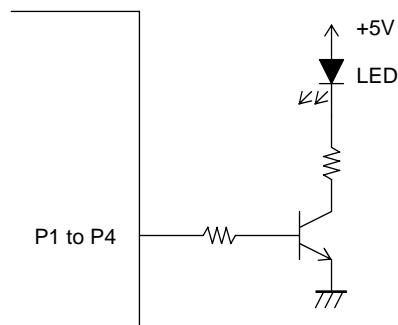

- (3) Unused pin treatment

When the S53/OSCI pin is not to be used, select the internal oscillator operating mode (setting control data OC to 0) to keep the pin open.

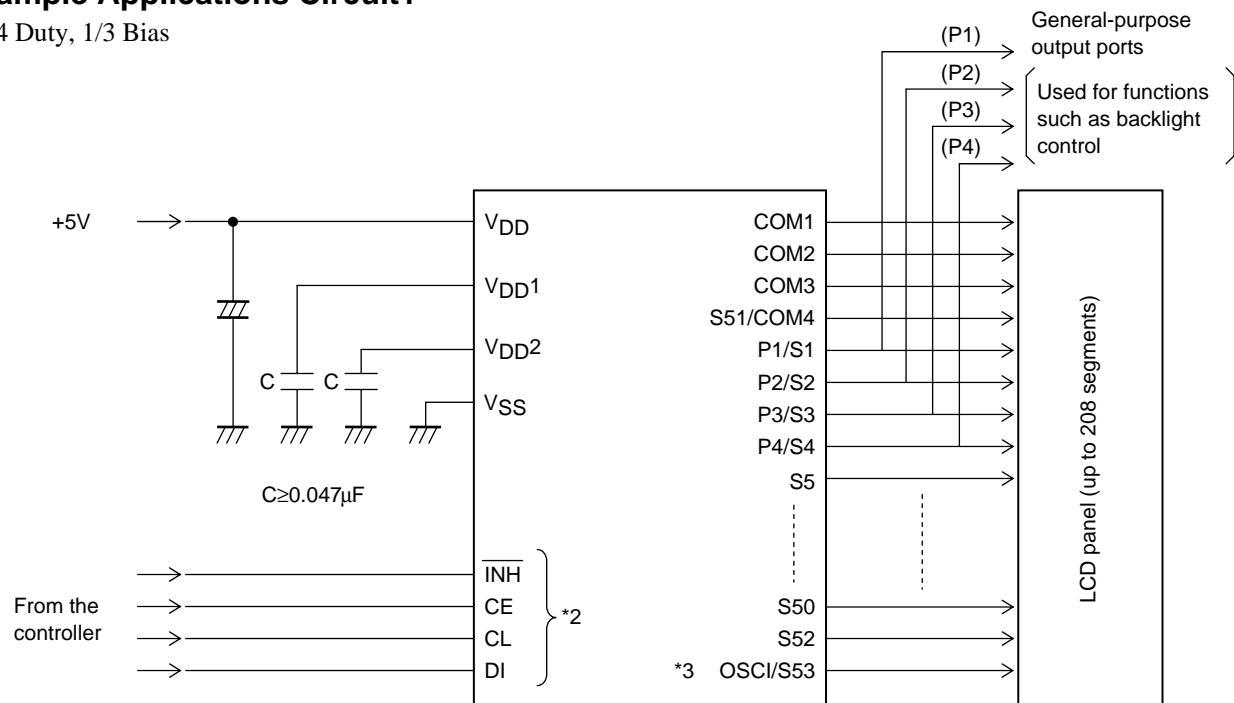

P1 to P4 pin peripheral circuit

It is recommended the circuit shown below be used to adjust the brightness of the LED backlight using the PWM output P1 to P4

Sample Applications Circuit1

1/4 Duty, 1/3 Bias

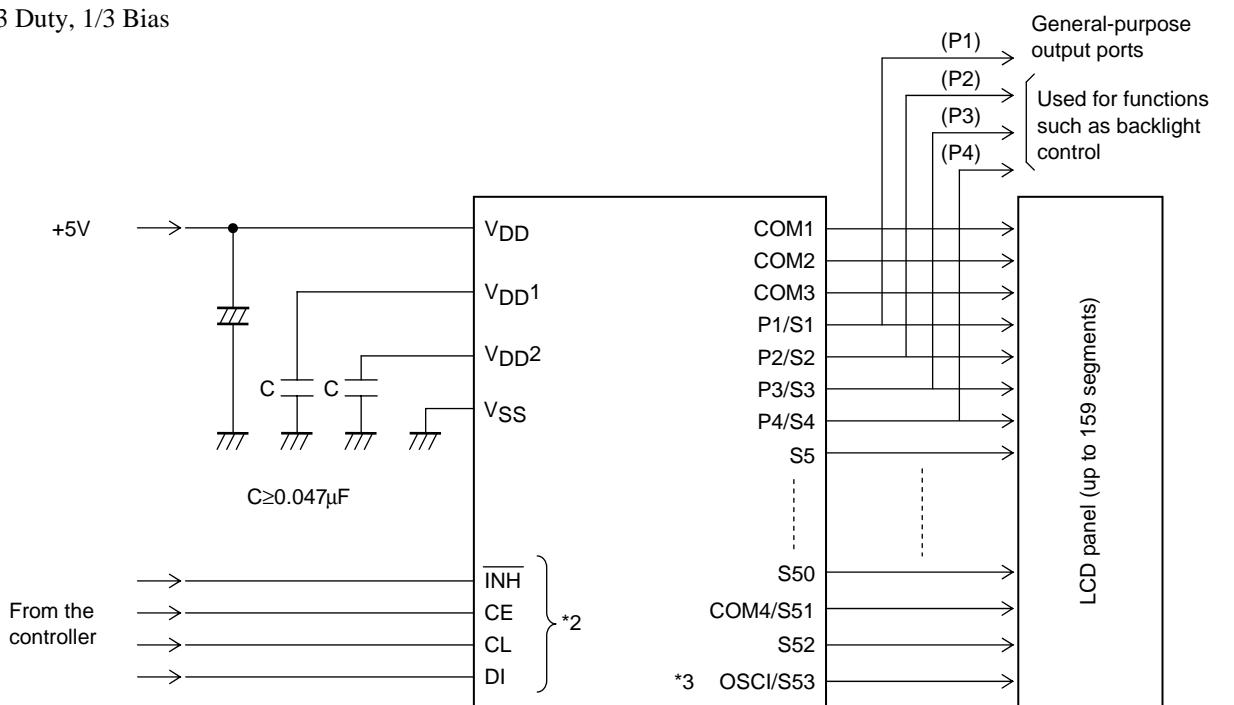

*2 The pins to be connected to the controller (CE, CL, DI, INH) can handle 3.3V or 5V.

*3 Connect the S53/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor R_g (2.2 to 22kΩ) between the S53/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode (see “S53/OSCI Pin Peripheral Circuit”).

Sample Application Circuit 2

1/3 Duty, 1/3 Bias

*2 The pins to be connected to the controller (CE, CL, DI, INH) can handle 3.3V or 5V.

*3 Connect the S53/OSCI pin to the LCD panel in the internal oscillator operating mode and insert a current protection resistor R_g (2.2 to 22kΩ) between the S53/OSCI pin and external clock output pin (external oscillator) in the external clock operating mode (see “S53/OSCI Pin Peripheral Circuit”).
