

PRODUCT SUMMARY

SKY77562 Tx-Rx FEM for Quad-Band GSM / GPRS 3-Band Antenna Switch Support

Applications

- Quad-band cellular handsets encompassing
 - Class 4 GSM850/900
 - Class 1 DCS1800 PCS1900
 - Class 12 GPRS multi-slot operation
 - 3-band WCDMA antenna switch support

Features

- Small, low profile package
 - 6 mm x 6 mm x 0.9 mm
 - 28-pad configuration
- High efficiency GSM LB
 - 47% High Power
 - 29% Medium Power
 - 15% Low Power
 - 5% Ultra-Low Power
- High efficiency GSM HB
 - 44% High Power
 - 29% Medium Power
 - 15% Low Power
 - 5% Ultra-Low Power
- Tx-VCO-to-antenna and antenna-to-Rx-SAW filter RF interface

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to Skyworks Definition of Green document number SQ04-0074.

Description

SKY77562 is a transmit and receive Front End Module (FEM) designed in a very low profile (0.9 mm), compact form factor for quad-band cellular handsets comprising GSM850/900, DCS1800, and PCS1900 operation – a complete transmit VCO-to-Antenna and Antenna-to-receive SAW filter solution. The FEM also supports Class 12 General Packet Radio Service (GPRS) multi-slot operation. WCDMA switch-through support is provided by six dedicated high-linearity ports, covering WCDMA bands from 700 MHz to 2600 MHz.

The module consists of a GSM850/900 PA and DCS1800/PCS1900 PA block, impedance-matching circuitry for 50 Ω input and output impedances, Tx harmonic filtering, high linearity-low insertion loss switches, and a Multi-Function power amplifier Control (MFC) block. The internal MFC function and interface circuitry is provided by a BiCMOS IC. .

Fabricated in InGaP/GaAs, the Heterojunction Bipolar Transistor (HBT) PA blocks support the GSM850/900 bands and DCS1800/PCS1900 bands. Both PA blocks share common power supply pads to distribute current. The output of the PA block and the outputs to the eight receive pads connect to the antenna pad through a highly linear antenna switch. The WCDMA and Rx ports feature a near 0 volts DC offset level, which eliminates any need for external blocking capacitors. The InGaP/GaAs die, switch die, Silicon (Si) controller die, and passive components are mounted on a multi-layer laminate substrate and the entire assembly is encapsulated with plastic overmold.

The SKY77562 RF I/O ports are internally matched to a 50 Ω load to reduce the number of external components for a quad-band design. Extremely low leakage current of the FEM maximizes handset standby time. Band selection and control of transmit and receive RF signal flows are performed via six external control pads (see Figure 1). Mode of operation, Tx, Rx, Band (GSM850, GSM900, DCS, PCS, and UMTS) are controlled through the 6 logic inputs LB_EN, HB_EN, MODE0, MODE1, SW0, and SW1.
