

Low Noise, Precision, Rail to Rail Output, JFET Dual Operational Amplifier

ADA4610S

1.0 Scope

- 1.1. This specification documents the detail requirements for space qualified product manufactured on Analog Devices, Inc.'s QML certified line per MIL-PRF-38535 Level V except as modified herein.
- 1.2. The manufacturing flow described in the STANDARD SPACE LEVEL PRODUCTS PROGRAM brochure is to be considered a part of this specification. <http://www.analog.com/aeroinfo>
- 1.3. This data specifically details the space grade version of this product. A more detailed operational description and a complete data sheet for commercial product grades can be found at <http://www.analog.com/ADA4610-2>

2.0 Part Number

2.1. The complete part number(s) of this specification follows:

Specific Part Number

ADA4610R703F

Description

Precision, Low Noise, Low Input Bias Current, Wide Bandwidth, Dual JFET, Operational Amplifier. Radiation tested to 100Krad (Si)

3.0 Case Outline

3.1. The case outline(s) are as designated in MIL-STD-1835 and as follows:

Outline Letter

X

Descriptive Designator

CDFP3-F10

Terminals

10 lead

Package style

Bottom Brazed Flat Pack

Package: X			
Pin Number	Terminal Symbol	Pin Type	Pin Description
1	NC/GND	N/A	No connection or ground this terminal
2	OUTA	Analog output	Operational amplifier output, Amp-A
3	-INA	Analog input	Operational amplifier negative input, Amp-A
4	+INA	Analog input	Operational amplifier positive input, Amp-A
5	-V _{sy}	Power	Negative power supply
6	NC/GND	N/A	No connection or ground this terminal
7	+INB	Analog input	Operational amplifier positive input, Amp-B
8	-INB	Analog input	Operational amplifier negative input, Amp-B
9	OUTB	Analog output	Operational amplifier output, Amp-B
10	+V _{sy}	Power	Positive power supply

4.0 Specifications

4.1. Absolute Maximum Ratings ^{1/}

Supply voltage (+V _{SY} to -V _{SY})	36 V
Input voltage (V _{IN}).....	-V _{SY} to +V _{SY} ^{7/}
Differential Input Voltage.....	±V _{SY} ^{7/}
Storage temperature range	-65°C to +150°C
Junction temperature maximum (T _J)	+150°C ^{2/}
Lead temperature (soldering, 60 seconds)	+300°C
Thermal resistance, junction-to-case (θ _{JC})	22 °C/W ^{3/}
Thermal resistance, junction-to-ambient (θ _{JA})	132 °C/W ^{3/}

4.2. Recommended Operating Conditions

Supply voltage (± V _{SY})	±5.0 V to ±15.0 V
Ambient operating temperature range (T _A).....	-55°C to +125°C

4.3. Nominal Operating Performance Characteristics ^{4/}

Input Capacitance

Differential (C _{DM})	3.1 pF
Common Mode (C _{CM})	4.8 pF
Input Resistance	>1 x 10 ¹³

Unity-Gain Crossover (V_{IN} = 5 mV_{p-p}, R_L = 2 kΩ, A_V = -10)

±V _{SY} = ±5 V	9.3 kHz
±V _{SY} = ±15 V	9.3 kHz

Phase Margin ^{5/}

±V _{SY} = ±5 V	61 Degrees
±V _{SY} = ±15 V	66 Degrees

-3 dB Closed-Loop Bandwidth (V_{IN} = 5 mV_{p-p}, A_V = 1) ^{6/}

±V _{SY} = ±5 V	10.6 MHz
±V _{SY} = ±15 V	9.4 MHz

Total Harmonic Distortion (THD)+Noise

1 kHz, G = +1, R _L = 2 kΩ, V _{IN} = 6 V rms	0000.6%
---	---------

4.4. Radiation Features

Maximum total dose available (dose rate = 50 – 300 rads(Si)/s)....100 k rads(Si)

^{1/} Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions outside of those indicated in the operation sections of this specification is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.

^{2/} While the ADA4610 is internally short circuit protected, this may not be sufficient to guarantee that the maximum junction temperature is not exceeded under all conditions. Do not exceed maximum T_J in application with output current load.

^{3/} Measurement taken under absolute worst case condition and represents data taken with thermal camera for highest power density location. See MIL-STD-1835 for average θ_{JC} number.

^{4/} T_A = 25°C, +/-V_{SY}=+/-5, +/-V_{SY} = +/- 15V and V_{CM} = 0V unless otherwise noted

^{5/} See Figures 14 and 17 in Section 7.0 Application Notes for Open-Loop, Gain and Phase vs. Frequency performance.

^{6/} See Figures 15 and 18 in Section 7.0 Application Notes for Closed-Loop Gain vs. Frequency performance.

^{7/} See Section 7.3 for information on how to limit input current.

TABLE IA – ELECTRICAL PERFORMANCE CHARACTERISTICS (+/-V_{SY} = +/-5V)

TABLE IA NOTES:

1/ $T_A \text{ nom} = 25^\circ\text{C}$, $T_A \text{ max} = 125^\circ\text{C}$, $T_A \text{ min} = -55^\circ\text{C}$ and $V_{CM} = 0\text{V}$ unless otherwise noted

2/ Parameter is part of device initial characterization which is only repeated after design and process changes or with subsequent wafer lots.

3/ Parameter is not tested post irradiation

4/ Calculated from 25°C to -55°C , 25°C to 125°C and -55°C to 125°C

5/ Input bias current increases exponentially as $T > 45^\circ\text{C}$. See Figure 10 in Section 7.0 Application Notes.

6/ Measured from 10% to 90% and 90% to 10% of output swing.

7/ While the ADA4610 is internally short circuit protected, this may not be sufficient to guarantee that the maximum junction temperature is not exceeded under all conditions. Do not exceed maximum T_J in application with output current load.

3/ Parameters noted in Table IA, IB are not tested post irradiation.

TABLE IIB – LIFE TEST/BURN-IN DELTA LIMITS (+/-V_{SY} = +/-5V & +/-V_{SY} = +/-15V)

Table IIB			
Parameter	Symbol	Delta	Units
Offset voltage	V _{OS}	±120	µV
Input Bias Current V _{CM} = 0V	I _B	±9.4	pA
Supply Current	I _{SY}	±0.7	mA

5.0 Burn-In Life Test, and Radiation

5.1. Burn-In Test Circuit, Life Test Circuit

5.1.1. The test conditions and circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing or acquiring activity upon request. The test circuit shall specify the inputs, outputs, biases, and power dissipation, as applicable, in accordance with the intent specified in method 1015 test condition B and alternate test condition D of MIL –STD-883.

5.1.2. HTRB is not applicable for this drawing.

5.2. Radiation Exposure Circuit

5.2.1. The radiation exposure circuit shall be maintained by the manufacturer under document revision level control and shall be made available to the preparing and acquiring activity upon request. Total dose irradiation testing shall be performed in accordance with MIL-STD-883 method 1019, condition A.

6.0 MIL-PRF-38535 QMLV Exceptions

6.1. Wafer Fabrication

Wafer fabrication occurs at MIL-PRF-38535 QML Class Q certified facility.

6.2. Wafer Lot Acceptance (WLA)

WLA per MIL-STD-883 TM 5007 is not available for this product.

7.0 Application Notes

7.1. General Description

The ADA4610 is a dual precision JFET amplifier that features low offset voltage, low input bias current, low input voltage noise, low input current noise, and rail-to-rail output.

Unlike many competitive amplifiers, the ADA4610 maintains fast settling performance even with substantial capacitive loads. Unlike many older JFET amplifiers, the ADA4610 does not suffer from output phase reversal when input voltages exceed the maximum common-mode voltage range.

7.2. Electrical Characteristics

For reference figures 2 through 39 are typical performance characteristics at $T_A = 25^\circ\text{C}$ unless otherwise stated taken from Rev B of the ADA4610-2 commercial datasheet.

Figure 42. Negative Step Settling Time

Figure 43. Supply Current vs. Supply Voltage and Temperature

7.3. INPUT OVERVOLTAGE PROTECTION

The ADA4610 have internal protective circuitry that allows voltages as high as 0.7 V beyond the supplies to be applied at the input of either terminal without causing damage. For higher input voltages, a series resistor is necessary to limit the input current. The resistor value can be determined from the formula

$$\frac{V_{IN} - V_S}{R_S} \leq 5mA$$

7.4. COMPARATOR OPERATION

Although op amps are quite different from comparators, occasionally an unused section of a dual or a quad op amp may be used as a comparator; however, this is not recommended for any rail-to-rail output op amp. For rail-to-rail output op amps, the output stage is generally a ratioed current mirror with bipolar or MOSFET transistors. With the part operating open loop, the second stage increases the current drive to the ratioed mirror to close the loop. However, the second stage cannot close the loop, which results in an increase in supply current. With the op amp configured as a comparator, the supply current can be significantly higher (see Figure 44). Configuring an unused section as a voltage follower with the noninverting input connected to a voltage within the input voltage range is recommended. The ADA4610 has a unique output stage design that reduces the excess supply current, but does not entirely eliminate this effect when the op amp is operating open loop.
