PERICOM[®]

PI3EQX501B

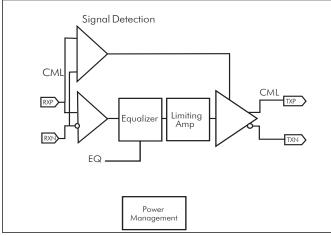

Features

- → USB 3.0 compatible
- → Full compliancy to USB 3.0 Super Speed standard
- → One 5.0Gbps differential signal pairs
- ➔ Adjustable Receiver Equalization
- → 100Ω Differential CML I/O's
- → Pin Configured Output Emphasis Control
- → Input signal level detect and squelch function
- ➔ Automatic Receiver Detect
- → Host Mode Capable
- → Low Power : 165mW
- → Auto "Slumber" mode for adaptive power management
- → Single Supply Voltage: 3.3V
- → Packaging: 8-Pin TDFN 2 x 2 mm

Pin Diagram (Top Side View)

Block Diagram

5.0Gbps, 1-channel, USB3.0 ReDriver™

Description

Pericom Semiconductor's PI3EQX501B is a low power, high performance 5.0 Gbps signal ReDriver[™] designed specifically for the USB 3.0 protocol. The device provides programmable equalization and De-Emphasis to opmize performance over a variety of physical mediums by reducing Inter-Symbol Interference.

PI3EQX501B supports one 100Ω Differential CML data I/O's between the Protocol ASIC to a switch fabric, over cable, or to extend the signals across other distant data pathways on the user's platform. The integrated equalization circuitry provides flexibility with signal integrity of the signal before the ReDriver. A low-level input signal detection and output squelch function is provided. The channels' input signal level determines whether the output is active.

The PI3EQX501B also includes a receiver detect function. The receiver detection loop will be active again if the corresponding channel's signal detector is idle for longer than 7.3mS. The channel will then move to Unplug Mode if load not detected, or it will return to Low Power Mode (Slumber Mode) due to inactivity.

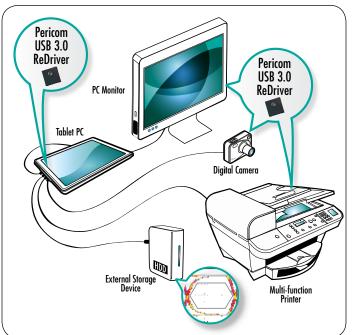

Figure1

Pin Description

| Pin # | Pin Name | Туре | Description | |
|------------|----------|--------|---|--|
| 1 | VDD | Power | 3.3V power supply | |
| 2,3 | RXP, RXN | Input | CML input channels. With Selectable input termination between 50 Ω to internal Vbias or 60k Ω to ground. | |
| 4 | TRI | Input | Set the state of chip; With internal 200kΩ pull-down resistor "High" means NO receiver termination detection and for debug mode. "Low" means normal operation mode with receiver termination detection. | |
| 5 | EQ | Input | Set the equalization of the channels. Tri-level input pin. With internal $100k\Omega$ pull-up resistor and $100K\Omega$ pull-down resistor. | |
| 7, 6 | TXP, TXN | Output | Selectable output termination between 50 Ω to internal Vbias or 2k Ω to internal Vbias. | |
| 8 | DE | Input | Set de-emphasis of output CML buffer. Tri-level input pin. With internal $100k\Omega$ pull-up resistor and $100k\Omega$ pull-down resistor. | |
| Center Pad | GND | GND | Supply Ground. | |

Power Management

Notebooks, netbooks, tablets and other power sensitive consumer devices require judicious use of power in order to maximize battery life. In order to minimize the power consumption of our devices, Pericom has added an additional adaptive power management feature. When a signal detector is idle for longer than 1.3ms, the channel will move to low power mode.

In the low power mode, the signal detector will still be monitoring the input channel. If a channel is in low power mode and the input signal is detected, it will wake-up immediately. If a channel is in low power mode and the signal detector is idle longer than 6ms, the receiver detection loop will be active again. If load is not detected, then the Channel will move to Device Unplug Mode and monitor the load continuously. If load is detected, it will return to Low Power Mode and receiver detection will be active again per 6ms.

Configuration Table

| Mode | Input R | Output R |
|--------------|--------------------------|--------------------------|
| Unplug mode | $60k\Omega$ to GND | $2k\Omega$ to V_{BIAS} |
| Slumber mode | 50Ω to V_{BIAS} | $2k\Omega$ to V_{BIAS} |
| Active mode | 50Ω to V_{BIAS} | 50Ω to V_{BIAS} |

Mode Adjustment

Equalization Setting:

EQ is the selection pin for the equalization.

| Equalizer setting | | |
|-------------------|---------------|--|
| EQ | @ 2.5GHz | |
| 0 | 3 dB | |
| open | 6dB (Default) | |
| 1 | 9dB | |

De-emphasis Setting:

DE is the selection pin for the de-emphasis.

| Output de-emphasis setting | | | | |
|----------------------------|-------------------|--|--|--|
| DE | De-emphasis | | | |
| 0 | 0 dB | | | |
| open | -3.5 dB (default) | | | |
| 1 | -6 dB | | | |

Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)

| · · · · · · · · · · · · · · · · · · · | |
|---------------------------------------|----------------------------|
| Storage Temperature | 65°C to +150°C |
| Supply Voltage to Ground Potential | -0.5V to +4.6V |
| DC SIG Voltage | $-0.5V$ to $V_{DD} + 0.5V$ |
| Current Output | 25mA to +25mA |
| Power Dissipation Continuous | |
| Operating Temperature | 40°C to +85°C |
| ESD, Human Body Model | 8kv to +8kV |
| ESD, Machine Model | 200V to +200V |
| | |

Stresses greater than those listed under MAXI-MUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

Note:

RECOMMENDED OPERATING CONDITIONS

| Symbol | Parameter | Conditions | Min. | Тур. | Max. | Units |
|-----------------------|-------------------------|-----------------|---------|------|---------|-------|
| DEVICE PARAMET | ERS | | | | | ~ |
| maximum date rate | | | | | 5 | Gbps |
| t _{ENB} | Slumber mode exist time | LFPS signal | | 20 | | ns |
| t _{DIS} | Slumber mode entry time | Electrical idle | | 1.3 | | ms |
| CONTROL LOGIC | | | | | | |
| I _{IH} | Input High Current | | | | 50 | |
| I _{IL} | Input LOW Current | | -50 | | | uA |
| Tri-level Control Pin | us(Pins: 5, 8) | | | | | |
| V _{IH} | Input High Voltage | | 0.8Vdd | | | 37 |
| V _{IL} | Input Low Voltage | | | | 0.2Vdd | V |
| LVCMOS Control Pi | ns (Pin: 4) | | | · | | · |
| V _{IH} | Input High Voltage | | 0.65Vdd | | | V |
| V _{IL} | Input Low Voltage | | | | 0.35Vdd | V |

AC/DC Electrical Characteristics

| 3.3V Power Supply Characteristics | | | | | | |
|-----------------------------------|------------------------------|--|------|------|------|-------|
| Symbol | Parameter | Conditions | Min. | Тур. | Max. | Units |

AC/DC Electrical Characteristics (Continued..)

AC/DC Electrical Characteristics (Continued..)

| Symbol | Parameter | Conditions | Min. | Тур. | Max. | Units |
|---|---|---|------|------|------|-------------------|
| V _{detect} | Voltage change to allow receiver detect | Positive voltage to sense receiver termi- nation | | | 600 | mV |
| t _R ,t _F | Output rise/fall time | 20%-80% of differental voltage measured 1" from the output pin | | 90 | | |
| t _{RF_MM} | Output rise/fall time mismatch | 20%-80% of differental voltage measured 1" from the output pin | | 1.5 | 20 | ps |
| T _{diff_LH,} T _{diff_HL} | Differential propagation delay | Propagation delay between 50% level at input and output | | 305 | | ps |
| Jitter Profile | | | | | | |
| $T_{TX-EYE}^{(1)(2)}$ | Total jitter(Tj) | | | 0.2 | 0.5 | |
| $DJ_{TX}^{(2)}$ | Deterministic jitter(Dj) | with 36 inch of input FR4 trace | | 0.1 | 0.3 | UI ⁽³⁾ |
| $RJ_{TX}^{(2)(4)}$ | Random jitter(Rj) | | | 0.09 | 0.2 | |

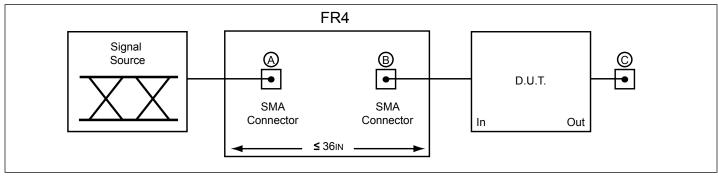

Note:

1.Includes RJ at 10⁻¹² BER

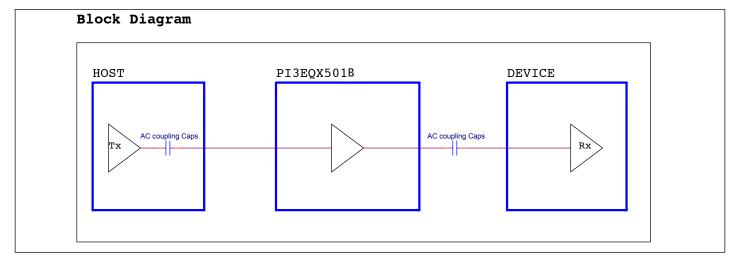

2.Determininstic jitter measured with PRBS31 pattern, Random jitter measured with 1010 pattern VID=1000mVpp, 5Gbps,

3.UI = 200ps

4.Rj calculated as 14.069 times the RMS random jitter for 10^{-12} BER
