0.5A 125V AC Qualified Type

Compact and low-profile for primary / secondary switching with compatibility to low level rating

■ Ratings and Safety Standards

Items	Specifications		
Ratings satisfying local electrical appliance and material safety law	0.5A 125V AC 0.25A 250V AC		
DC ratings	5mA 5V DC

Note

Connector corresponds to [HLP-03V], manufactured by the J.S.T. Mfg. Co., Ltd.

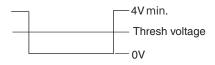

0.5A 125V AC Qualified Type / Cautions

- 1. This product does not have a water-proof or drip-proof construction. Prevent ingress of water into the switch. Avoid using around spilt or flowing. It may cause deterioration of the insulation.
- 2. Do not apply load on the connecter or lead wire (code) attached to the product. Using the product with load applied on the connecter / lead wire might cause terminal wobble or contact failures.
- 3. ON / OFF signal reading (For DC ratings)

Shall be considered when designing circuit and software as follows.

(1) Setting of thresh voltage

A 4V or larger voltage difference between switch ON and OFF is recommended. Thresh voltage should be set to the center.

(2) ON / OFF signal reading

ON / OFF signal reading intervals should be at a minimum of 50ms with at least 3 repetitions.

Reading of micro-computer

4. Verify the performance under actual product conditions before use.

Notes

- 1. *1. Dip soldering can be used on SDDJE for PC board terminal and SDDJF right angle terminal types only.
- 2. **2. The operating temperature range for automotive applications can be raised upon request. Please contact us for details.
- 3. left Indicates applicability to all products in the series, while \bigcirc indicates applicability to some products in the series.

Reference for Hand Soldering

Series	Soldering temperature	Soldering time	
SDDJE, SDDJF, SDKP, SDDJF1A, SDKZ, SDDE	350±10℃	3+1/0s	
SDKR	300±10℃	3±0.5s	

Reference for Dip Soldering

(For PC board terminal types and SDDJF right-angle terminal types)

Series	Dip soldering			
Selles	Soldering temperature	Duration of immersion		
SDKR, SDDJE, SDDJF, SDKP, SDKZ, SDDE	260±5℃	10±1s		

Power Switches Cautions

Power Switches Soldering Conditions

- 1. The primary power supply switching is subject to the safety regulations, and the provisions differ by each destination. Consult with us for non-standard use cases.
- 2. An unstable contact may occur if the switch current is lower than 0.5A. For this case, consult with us.
- 3. These power switches were produced for alternating current. For direct current, consult with us.
- 4. Appling load to terminals during soldering under certain conditions may cause deformation and electrical property degradation.
- 5. Avoid use of water-soluble soldering flux, since it may corrode the switches.
- 6. When soldering twice, wait until the first soldered portion cools to normal temperature. Continuous heating will deform the external portions, loosen or dislodge terminals, or may deteriorate their electrical characteristics.
- 7. Before soldering switches with locking mechanism, release the locks. If they are soldered without releasing the locks, the soldering heat may deform the locking mechanism.
- 8. Be sure to release the locks before removing the knobs. Otherwise, the locking mechanism may be broken
- 9. Be sure to use the switch with forced travel positioned as close to the total travel as possible.
- 10. Tighten the mounting screws by applying the specified torque. Tightening with a larger torque than the specified will result in malfunction or breakage of screws.
- 11. Corrosive gas if generated by peripheral parts of a set, malfunction such as imperfect contact may occur. Thorough investigation shall be required beforehand.
- 12. Storage

Store the products as delivered at normal temperature and humidity, out of direct sunlight and away from corrosive gases. Use them as soon as possible and no later than six months after delivery. Once the seal is broken, use them as soon as possible.

Power Switches Safety Standards

1. Safety Standards Outline

Safety standards are established by a country or an organization representing it to protect general users from electrical shock and fire hazards. It establishes standards for electrical devices and components. For electrical equipment manufacturers, utilizing switches that have been safety-approved ensures the safety of the switch. The use of a safety-approved switch also simplifies at least one part of the process of obtaining certification by safety testing.

2. Major Safety Standards

(1) Electrical Appliance and Material Safety Law

The conventional [Electrical Appliance and Material Control Law] has changed to [Electrical Appliance and Material Safety Law] and has been enforced since April 1, 2001. Electrical appliances are categorized into special electric appliances and parts (formerly Class A) and Electrical appliances other than the special electric appliances (formerly Class B). Special electric appliances are required to receive goodness of fit test at a certified test agency and to store the certificate. Also, penal provisions have been reinforced.

(2) UL (Underwriters Laboratories Inc.) 🔊

Underwriters Laboratories Inc. (UL) is the American safety approving organization. Its purpose is to ensure consumer safety and protect them from fire hazards. State law requires that equipment to be exported to the United States utilize UL approved power switches or power switches meeting UL standards and capable of passing UL tests.
