

# FC7630 SP FIXED- MULTI-OUTPUT REGULATORS

## DESCRIPTION

The FC7630 is a multi-output positive voltage regulator designed to provide fixed precision output voltages of 5.1V, 8V at current up to 0.5A and 12V at current up to 1A with external PNP transistor. An internal reset circuit generates a reset pulse when the output 1 decrease below the regulated value. Output2 & 3 can be disabled by TTL input. Protection features include over voltage protection, short circuit protection and thermal shutdown.

10-SIP H / S

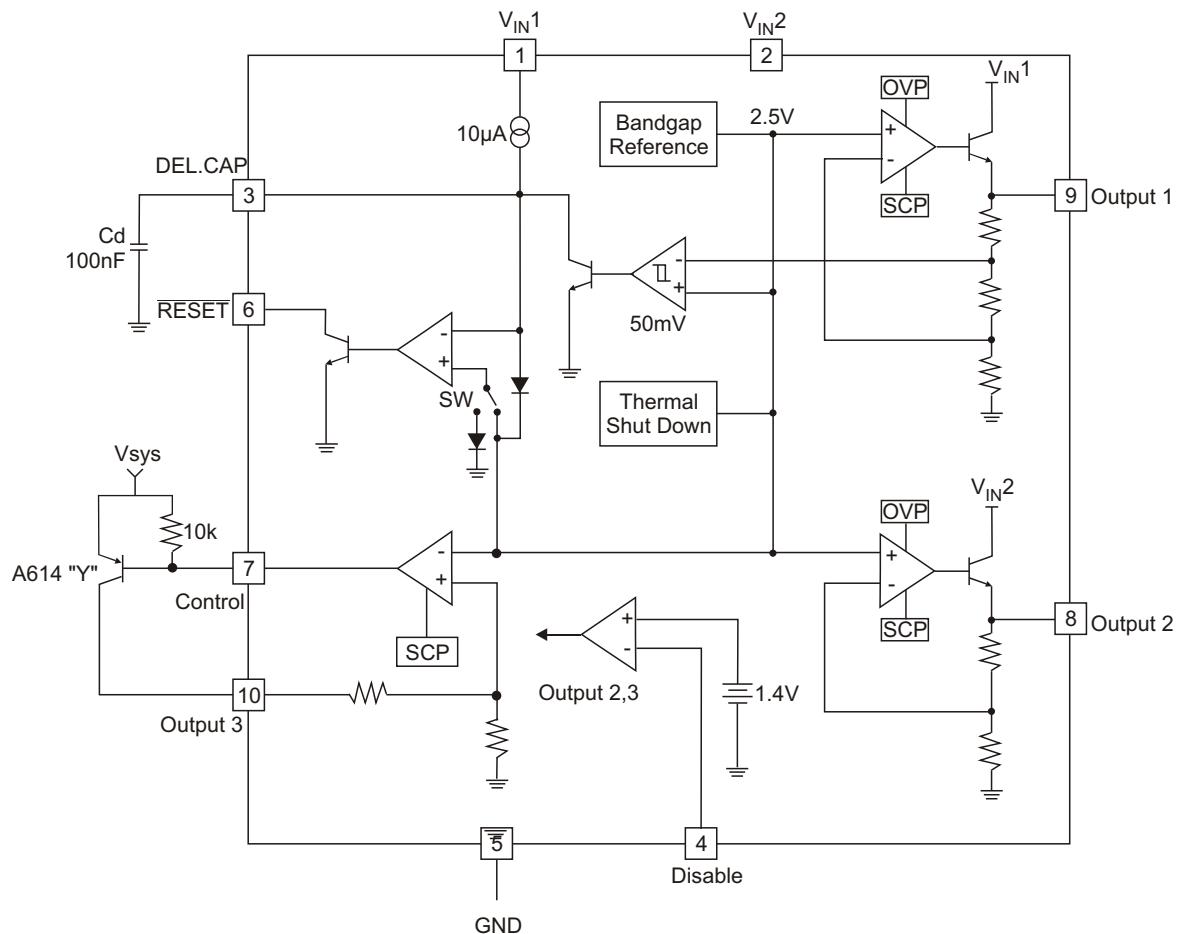

$T_A = 0 \dots +125^\circ C$

## FEATURES

- Output Currents up to 0.5A (output1 & 2)
- Output Current up to 1A with External Transistor (output3)
- Fixed Precision Output 1 voltage 5.1V  $\pm 2\%$
- Fixed Precision Output 2 voltage 8V  $\pm 2\%$
- Control Signal Generator for Output 3 voltage (12V  $\pm 2\%$ )
- Reset Facility for Output Voltage1
- Output 2,3 with Disable by TTL Input
- Current Limit Protection at Each Output
- Thermal Shut Down

### Notes:

1. To check the reset circuit ,the reset output is low to discharge the delay capacitor(=Cd). if it's less than V<sub>O</sub>1-0.25V. And the reset output is high when the delay capacitor voltage linearly increased by the interal current source(10µA) if it's more than V<sub>O</sub>1- 0.2V. The equations of delay time is same as below. Trd = (Cd X 2.5) / 10µA

2. These parameters, although guaranteed, are not 100% tested in production.
