

INFRARED EMITTING DIODES

# LHIR43733/T100/A-PF

# DATA SHEET

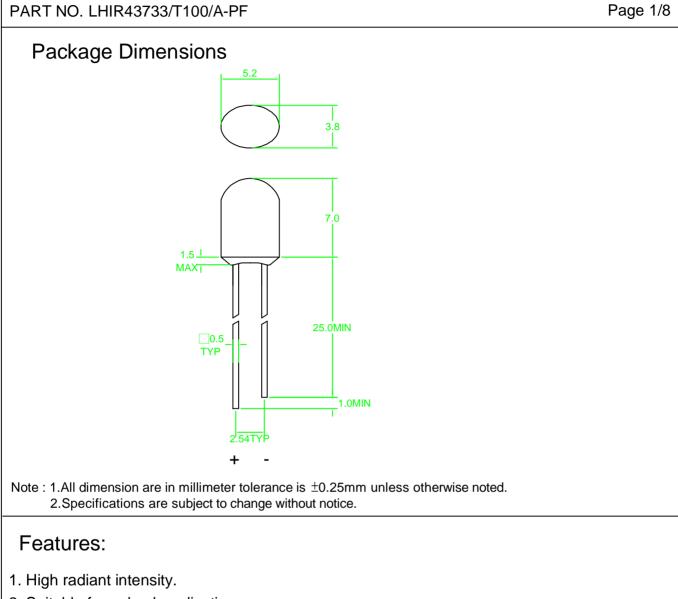

DOC. NO : QW0905-LHIR43733/T100/A-PF

REV. : <u>A</u>

DATE : 12 -May. - 2014

- 2. Suitable for pulsed applications.
- 3. Low average degradation.

## **Descriptions:**

TheLHIR43733/T100/A-PF series are high power solution grown efficiency Gallium Arsenide infrared emitting diodes encapsulated in water clear plastic T-1 3/4 package individually

**Device Selection Guide:** 

| PART NO             | MATERIAL | LENS COLOR  |  |
|---------------------|----------|-------------|--|
| LHIR43733/T100/A-PF | GaAlAs   | Water Clear |  |

Ambient Temperature [°C]

| PART NO. LHIR43733/T100/A-PF  | Page 5/8               |
|---|------------------------|
| Storage time:   |                        |
| 1.The operation of Temperatures and RH are : 5 $^\circ\!\mathrm{C}$ ~35 $^\circ\!\mathrm{C}$ ,RH<60%.   |                        |
| 2.Once the package is opened, the products should be used within a week.<br>Otherwise, they should be kept in a damp proof box with descanting agent.<br>Considering the tape life, we suggest our customers to use our products within<br>a year(from production date).  |                        |
| 3.If opened more than one week in an atmosphere 5 $^\circ\!C$ ~ 35 $^\circ\!C$ ,RH<60%, they should be treated at 60 $^\circ\!C\pm$ 5 $^\circ\!C$ fo r 15hrs.   |                        |
| Drive Method:   |                        |
| LED is a current operated device, and therefore, require some kind of current limitin<br>the driver circuit. This current limiting typically takes the form of a current limiting resi<br>with the LED.<br>Consider worst case voltage variations than could occur across the current limiting r<br>current should not be allowed to change by more than 40 % of its desired value. | istor placed in series |
| Circuit model A Circuit model   | В                      |
|   | D                      |
| <ul><li>(A) Recommended circuit.</li><li>(B) The difference of brightness between LED could be found due to the VF-IF charac</li></ul>  | teristics of LED.      |
| Cleaning:   |                        |
| Use alcohol-based cleaning solvents such as isopropyl alcohol to clean the LED.   |                        |
| ESD(Electrostatic Discharge):   |                        |
| Static Electricity or power surge will damage the LED. Use of a conductive wrist ban  | d or anti-electrosatic |

Static Electricity or power surge will damage the LED. Use of a conductive wrist band or anti-electrosatic glove is recommended when handing these LED. All devices, equipment and machinery must be properly grounded.

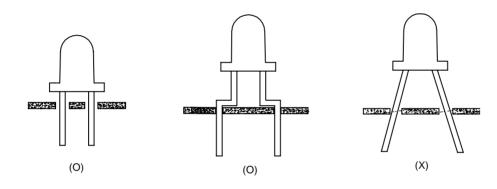

PART NO. LHIR43733/T100/A-PF

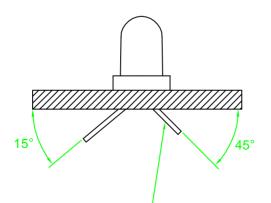

Page 6/8

## Mounting:

1. If the leads are subjected to stress during soldering a printed circuit board, illumination failure may result immediately or later during use. For this reason, make sure that the intervals between the installation holes in the board are equal to the intervals between the leads (after forming if done) so that no stress is applied to the lead.

2. The LED lamps are designed for high-density mounting and have a structure which can alleviate mechanical stress due to clinching . Nevertheless, take care to avoid the occurrence of residual mechanical stress due to clinching.

Anode side(cathode side on GaAlAs chips)

# Soldering Condition(Pb-Free)

#### 1.Iron:

Soldering Iron:30W Max Temperature 350°C Max Soldering Time:3 Seconds Max(One time only) Distance:2mm Min(From solder joint to body)

#### 2. Wave Soldering Profile

Dip Soldering Preheat: 120°C Max Preheat time: 60seconds Max Ramp-up 2°C/sec(max) Ramp-Down:-5°C/sec(max) Solder Bath:260°C Max Dipping Time:3 seconds Max Distance:2mm Min(From solder joint to body)

Note: 1.Wave solder should not be made more than one time. 2.You can just only select one of the soldering conditions as above.
