General Description

The TSM4N80 N-Channel enhancement mode Power MOSFET is produced by planar stripe DMOS technology. This advanced technology has been especially tailored to minimize on-state resistance, provide superior switching performance, and withstand high energy pulse in the avalanche and commutation mode. These devices are well suited for high efficiency switch mode power supply, electronic lamp ballast based on half bridge.

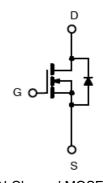

Features

- Low $R_{DS(ON)}$ 3 Ω (Max.)
- Low gate charge typical @ 25nC (Typ.)
- Improve dv/dt capability
