

NCV8674

Very Low I_q Low Dropout Linear Regulator

The NCV8674 is a precision 5.0 V or 12 V fixed output, low dropout integrated voltage regulator with an output current capability of 350 mA. Careful management of light load current consumption, combined with a low leakage process, achieve a typical quiescent current of 30 μ A.

The output voltage is accurate within $\pm 2.0\%$, and maximum dropout voltage is 600 mV at full rated load current.

It is internally protected against input supply reversal, output overcurrent faults, and excess die temperature. No external components are required to enable these features.

Features

- 5.0 V and 12 V Output Voltage Options
- $\pm 2.0\%$ Output Accuracy, Over Full Temperature Range
- 40 μ A Maximum Quiescent Current at $I_{OUT} = 100 \mu$ A
- 600 mV Maximum Dropout Voltage at 350 mA Load Current
- Wide Input Voltage Operating Range of 5.5 V to 45 V
- Internal Fault Protection
 - ◆ -42 V Reverse Voltage
 - ◆ Short Circuit/Overcurrent
 - ◆ Thermal Overload
- NCV Prefix for Automotive and Other Applications Requiring Site and Control Changes
- AEC-Q100 Qualified
- EMC Compliant
- This is a Pb-Free Device

Figure 1. Block Diagram

PIN FUNCTION DESCRIPTION

Pin No.	Symbol	Function
1	V_{IN}	Unregulated input voltage; ($V_{OUT} + 0.5\text{ V}$) to 45 V.
2	GND	Ground; substrate.
3	V_{OUT}	Regulated output voltage; collector of the internal PNP pass transistor.
TAB	GND	Ground; substrate and best thermal connection to the die.

OPERATING RANGE

Pin Symbol, Parameter	Symbol	Min	Max	Unit
V_{IN} , DC Input Operating Voltage	V_{IN}	$V_{OUT} + 0.5\text{ V}$	+45	V
Junction Temperature Operating Range	T_J	-40	+150	°C

MAXIMUM RATINGS

Rating	Symbol	Min	Max	Unit
V_{IN} , DC Voltage	V_{IN}	-42	+45	V
V_{OUT} , DC Voltage	V_{OUT}	-0.3	+16	V
Storage Temperature	T_{stg}	-55	+150	°C
ESD Capability, Human Body Model (Note 1)	V_{ESDHB}	4000	-	V
ESD Capability, Machine Model (Note 1)	V_{ESDMIM}	200	-	V

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

- This device series incorporates ESD protection and is tested by the following methods:
 ESD HBM tested per AEC-Q100-002 (EIA/JESD22-A 114C)
 ESD MM tested per AEC-Q100-003 (EIA/JESD22-A 115C)

Thermal Resistance

Parameter	Symbol	Min	Max	Unit
Junction-to-Ambient(Note 2)	$R_{\theta JA}$	-	40	°C/W
Junction-to-Case	$R_{\theta JC}$	-	4.0	°C/W

- 1 oz., 1 in² copper area.

Circuit Description

The NCV8674 is a precision trimmed 5.0 V or 12 V fixed output regulator. Careful management of light load consumption combined with a low leakage process results in a typical quiescent current of 30 μ A. The device has current capability of 350 mA, with 600 mV of dropout voltage at full rated load current. The regulation is provided by a PNP pass transistor controlled by an error amplifier with a bandgap reference. The regulator is protected by both current limit and short circuit protection. Thermal shutdown occurs above 150°C to protect the IC during overloads and extreme ambient temperatures.

Regulator

The error amplifier compares the reference voltage to a sample of the output voltage (V_{out}) and drives the base of a PNP series pass transistor by a buffer. The reference is a bandgap design to give it a temperature-stable output. Saturation control of the PNP is a function of the load current and input voltage. Over saturation of the output power device is prevented, and quiescent current in the ground pin is minimized. The NCV8674 is equipped with foldback current protection. This protection is designed to reduce the current limit during an overcurrent situation.

Regulator Stability Considerations

The input capacitor C_{IN} in Figure 2 is necessary for compensating input line reactance. Possible oscillations caused by input inductance and input capacitance can be damped by using a resistor of approximately 1 Ω in series with C_{IN} . The output or compensation capacitor, C_{OUT} helps determine three main characteristics of a linear regulator: startup delay, load transient response and loop stability. The capacitor value and type should be based on cost, availability, size and temperature constraints. Tantalum, aluminum electrolytic, film, or ceramic capacitors are all acceptable solutions, however, attention

must be paid to ESR constraints. The aluminum electrolytic capacitor is the least expensive solution, but, if the circuit operates at low temperatures (-25°C to -40°C), both the value and ESR of the capacitor will vary considerably. The capacitor manufacturer's data sheet usually provides this information. The value for the output capacitor C_{OUT} shown in Figure 2 should work for most applications; however, it is not necessarily the optimized solution. Stability is guaranteed at values $C_{OUT} \geq 22 \mu$ F and $ESR \leq 7.0 \Omega$, within the operating temperature range. Actual limits are shown in a graph in the Typical Characteristics section.

Calculating Power Dissipation in a Single Output Linear Regulator

The maximum power dissipation for a single output regulator (Figure 2) is:

$$P_{D(max)} = [V_{IN(max)} - V_{OUT(min)}] \cdot I_{OUT(max)} + V_{IN(max)} \cdot I_q \quad (eq. 1)$$

Where:

$V_{IN(max)}$ is the maximum input voltage,

$V_{OUT(min)}$ is the minimum output voltage,

$I_{OUT(max)}$ is the maximum output current for the application, and I_q is the quiescent current the regulator consumes at $I_{OUT(max)}$.

Once the value of $P_{D(Max)}$ is known, the maximum permissible value of $R_{\theta JA}$ can be calculated:

$$R_{\theta JA} = \frac{150^\circ\text{C} - T_A}{P_D} \quad (eq. 2)$$

The value of $R_{\theta JA}$ can then be compared with those in thermal resistance versus copper area graph (Figure 26). Those designs with cooling area corresponding to $R_{\theta JA}$'s less than the calculated value in Equation 2 will keep the die temperature below 150°C. The current flow and voltages are shown in the Measurement Circuit Diagram.
