

# NCV8535

## Ultra High Accuracy, Low Iq, 500 mA Low Dropout Regulator with Enable

The NCV8535 is a high performance, low dropout regulator. With accuracy of  $\pm 0.9\%$  over line and load and ultra-low quiescent current and noise it encompasses all of the necessary features required by today's consumer electronics. This unique device is guaranteed to be stable without a minimum load current requirement and stable with any type of capacitor as small as 1.0  $\mu\text{F}$ . The NCV8535 also comes equipped with sense and noise reduction pins to increase the overall utility of the device. The NCV8535 offers reverse bias protection.

### Features

- High Accuracy Over Line and Load ( $\pm 0.9\%$  at  $25^\circ\text{C}$ )
- Ultra-Low Dropout Voltage at Full Load (260 mV typ.)
- No Minimum Output Current Required for Stability
- Low Noise (31  $\mu\text{Vrms}$  w/10 nF  $C_{nr}$  and 51  $\mu\text{Vrms}$  w/out  $C_{nr}$ )
- Low Shutdown Current (0.07  $\mu\text{A}$ )
- Reverse Bias Protected
- 2.9 V to 12 V Supply Range
- Thermal Shutdown Protection
- Current Limitation
- Requires Only 1.0  $\mu\text{F}$  Output Capacitance for Stability
- Stable with Any Type of Capacitor (including MLCC)
- Available in 1.5 V, 1.8 V, 1.9 V, 2.5 V, 2.8 V, 2.85 V, 3.0 V, 3.3 V, 3.5 V, 5.0 V and Adjustable Output Voltages
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable
- These are Pb-Free Devices

### Applications

- PCMCIA Card
- Cellular Phones
- Camcoders and Cameras
- Networking Systems, DSL/Cable Modems
- Cable Set-Top Box
- MP3/CD Players
- DSP Supply
- Displays and Monitors

## PIN FUNCTION DESCRIPTION

Pin No.	Pin Name	Description
---------	----------	-------------

### FIXED VERSION

1, 2	V <sub>out</sub>	Regulated output voltage. Bypass to ground with C <sub>out</sub> ≥ 1.0 μF.
3	SENSE	For output voltage sensing, connect to Pins 1 and 2.
4	GND	Power Supply Ground
7	NR	Noise Reduction Pin. This is an optional pin used to further reduce noise.
8	$\overline{SD}$	Shutdown pin. When not in use, this pin should be connected to the input pin.
9, 10	V <sub>in</sub>	Power Supply Input Voltage
5, 6	NC	Not Connected
EPAD	EPAD	Exposed thermal pad should be connected to ground.

### ADJUSTABLE VERSION

1, 2	V <sub>out</sub>	Regulated output voltage. Bypass to ground with C <sub>out</sub> ≥ 1.0 μF.
3	Adj	Adjustable pin; reference voltage = 1.25 V.
4	GND	Power Supply Ground
7	NR	Noise Reduction Pin. This is an optional pin used to further reduce noise.
8	$\overline{SD}$	Shutdown pin. When not in use, this pin should be connected to the input pin.
9, 10	V <sub>in</sub>	Power Supply Input Voltage
5, 6	NC	Not Connected
EPAD	EPAD	Exposed thermal pad should be connected to ground.

## MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Input Voltage	V <sub>in</sub>	-0.3 to +16	V
Output Voltage	V <sub>out</sub>	-0.3 to V <sub>in</sub> +0.3 or 10 V*	V
Shutdown Pin Voltage	V <sub>sh</sub>	-0.3 to +16	V
Junction Temperature Range	T <sub>J</sub>	-40 to +150	°C
Storage Temperature Range	T <sub>stg</sub>	-55 to +150	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

NOTE: This device series contains ESD protection and exceeds the following tests:

Human Body Model (HBM) tested per AEC-Q100-002 (EIA/JESD22-A114)

Machine Model (MM) tested per AEC-Q100-003 (EIA/JESD22-A115)

Charged Device Model (CDM) tested per EIA/JESD22-C101

\*Which ever is less. Reverse bias protection feature valid only if V<sub>out</sub> - V<sub>in</sub> ≤ 7 V.

## THERMAL CHARACTERISTICS

Characteristic	Test Conditions (Typical Value)		Unit
	Min Pad Board (Note 1)	1" Pad Board (Note 1)	
Junction-to-Air, θ <sub>JA</sub>	215	66	°C/W
Junction-to-Pin, ψ <sub>JL2</sub>	55	17	°C/W

1. As mounted on a 35 x 35 x 1.5 mm FR4 Substrate, with a single layer of a specified copper area of 2 oz (0.07 mm thick) copper traces and heat spreading area. JEDEC 51 specifications for a low and high conductivity test board recommend a 2 oz copper thickness. Test conditions are under natural convection or zero air flow.

31. Performance guaranteed over the operating temperature range by design and/or characterization, production tested at  $T_J = T_A = 25^{\circ}\text{C}$ . Low duty cycle pulse techniques are used during testing to maintain the junction temperature as close to ambient as possible.

32. For output current capability for  $T_A < 0^{\circ}\text{C}$ , please refer to Figures 18 to 22.

33.  $T_A$  must be greater than  $0^{\circ}\text{C}$ .

34. Reverse bias protection feature valid only if  $V_{out} - V_{in} \leq 7$  V.

APPLICATIONS INFORMATION

**Reverse Bias Protection**

Reverse bias is a condition caused when the input voltage goes to zero, but the output voltage is kept high either by a large output capacitor or another source in the application which feeds the output pin.

Normally in a bipolar LDO all the current will flow from the output pin to input pin through the PN junction with limited current capability and with the potential to destroy the IC.

Due to an improved architecture, the NCV8535 can withstand up to 7.0 V on the output pin with virtually no current flowing from output pin to input pin, and only negligible amount of current (tens of  $\mu\text{A}$ ) flowing from the output pin to ground for infinite duration.

**Input Capacitor**

An input capacitor of at least 1.0  $\mu\text{F}$ , any type, is recommended to improve the transient response of the regulator and/or if the regulator is located more than a few inches from the power source. It will also reduce the circuit's sensitivity to the input line impedance at high frequencies. The capacitor should be mounted with the shortest possible track length directly across the regular's input terminals.

**Output Capacitor**

The NCV8535 remains stable with any type of capacitor as long as it fulfills its 1.0  $\mu\text{F}$  requirement. There are no constraints on the minimum ESR and it will remain stable up to an ESR of 5.0  $\Omega$ . Larger capacitor values will improve the noise rejection and load transient response.

**Noise Reduction Pin**

Output noise can be greatly reduced by connecting a 10 nF capacitor ( $C_{nr}$ ) between the noise reduction pin and ground (see Figure 1). In applications where very low noise is not required, the noise reduction pin can be left unconnected.

For the adjustable version, in addition to the 10 nF  $C_{nr}$ , a 68 pF capacitor connected in parallel with R1 (see Figure 2) is recommended to further reduce output noise and improve stability.

**Adjustable Operation**

The output voltage can be set by using a resistor divider as shown in Figure 2 with a range of 1.25 to 10 V. The appropriate resistor divider can be found by solving the equation below. The recommended current through the resistor divider is from 10  $\mu\text{A}$  to 100  $\mu\text{A}$ . This can be accomplished by selecting resistors in the k $\Omega$  range. As result, the  $I_{adj} * R2$  becomes negligible in the equation and can be ignored.

$$V_{out} = 1.25 * \left(1 + \frac{R1}{R2}\right) + I_{adj} * R2 \quad (\text{eq. 1})$$

Example:

For  $V_{out} = 2.9 \text{ V}$ , can use  $R1 = 36 \text{ k}\Omega$  and  $R2 = 27 \text{ k}\Omega$ .

$$1.25 * \left(1 + \frac{36 \text{ k}\Omega}{27 \text{ k}\Omega}\right) = 2.91 \text{ V} \quad (\text{eq. 2})$$

**Dropout Voltage**

The voltage dropout is measured at 97% of the nominal output voltage.

**No-Load Regulation Considerations**

If there is no load at output of the regulator and ambient temperature is higher than 85°C leakage current flowing from input to output through pass transistor may cause increase of output voltage out of specification range up to input voltage level. To avoid this situation minimum load current of 100  $\mu\text{A}$  or higher is recommended if ambient temperature exceeds 85°C.

**Thermal Considerations**

Internal thermal limiting circuitry is provided to protect the integrated circuit in the event that the maximum junction temperature is exceeded. This feature provides protection from a catastrophic device failure due to accidental overheating. This protection feature is not intended to be used as a substitute to heat sinking. The maximum power that can be dissipated, can be calculated with the equation below:

$$P_D = \frac{T_{J(max)} - T_A}{R_{\theta JA}} \quad (\text{eq. 3})$$

## PACKAGE DIMENSIONS

DFN10, 3x3, 0.5P  
CASE 485C  
ISSUE E

- NOTES:
1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
  2. CONTROLLING DIMENSION: MILLIMETERS.
  3. DIMENSION b APPLIES TO PLATED TERMINAL AND IS MEASURED BETWEEN 0.25 AND 0.30 MM FROM TERMINAL.
  4. COPLANARITY APPLIES TO THE EXPOSED PAD AS WELL AS THE TERMINALS.
  5. TERMINAL b MAY HAVE MOLD COMPOUND MATERIAL ALONG SIDE EDGE. MOLD FLASHING MAY NOT EXCEED 30 MICRONS ONTO BOTTOM SURFACE OF TERMINAL b.
  6. FOR DEVICE OPN CONTAINING W OPTION, DETAIL A AND B ALTERNATE CONSTRUCTION ARE NOT APPLICABLE. WETTABLE FLANK CONSTRUCTION IS DETAIL B AS SHOWN ON SIDE VIEW OF PACKAGE.

\*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.
