

ISL28133

Single Micropower, Chopper Stabilized, RRIO Operational Amplifier

FN6560  
Rev.7.00  
Sep 26, 2015

The [ISL28133](#) is a single micropower, chopper stabilized operational amplifier that is optimized for single supply operation from 1.8V to 5.5V. Its low supply current of 18µA and wide input range enable make it an excellent general purpose op amp for a range of applications. The ISL28133 is ideal for handheld devices that operate off 2 AA or single Li-ion batteries.

The ISL28133 is available in the 5 Ld SOT-23, the 5 Ld SC70, and the 6 Ld 1.6mmx1.6mm µTDFN packages. All devices operate over the extended temperature range of -40°C to +125°C.

- [AN1499](#) "ISL28133EVAL1Z High-Gain Evaluation Board User's Guide"

**Features**

- Low input offset voltage ..... 8µV, Max.
- Low offset TC ..... 0.075µV/°C, Max
- Input bias current ..... 300pA, Max.
- Quiescent current ..... 18µA, Typ.
- Wide supply range ..... 1.8V to 5.5V
- Low noise (0.01Hz to 10Hz)..... 1.1µV<sub>p-p</sub>, Typ.
- Rail-to-rail inputs and output
- Operating temperature range.....-40°C to +125°C

**Applications**

- Bidirectional current sense
- Temperature measurement
- Medical equipment
- Electronic weigh scales

### NOTES:

- Please refer to [TB347](#) for details on reel specifications.
- These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
- These Intersil Pb-free plastic packaged products employ special Pb-free material sets; molding compounds/die attach materials and NiPdAu plate - e4 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations. Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
- For Moisture Sensitivity Level (MSL), please see the device information page for the [ISL28133](#). For more information on MSL please see techbrief [TB363](#).
- The part marking is located on the bottom of the part.

# Pin Configurations

# Pin Descriptions

ISL28133 (5 Ld SOT23)	ISL28133 (5 Ld SC-70)	ISL28133 (6 Ld μTDFN)	PIN NAME	FUNCTION	EQUIVALENT CIRCUIT
3	1	4	IN+	Non-inverting input	<p>Circuit 1</p>
2	2	2	V-	Negative supply	
4	3	3	IN-	Inverting input	(See Circuit 1)
1	4	1	OUT	Output	<p>Circuit 2</p>
5	5	6	V+	Positive supply	
		5	NC	Not Connected – This pin is not electrically connected internally.	

## Absolute Maximum Ratings

Max Supply Voltage V+ to V-	6.5V
Max Voltage VIN to GND	-0.5V to 6.5V
Max Input Differential Voltage	6.5V
Max Input Current	20mA
Max Voltage VOUT to GND (10s)	6.5V
ESD Rating	
Human Body Model	3000V
Machine Model	200V
Charged Device Model	1500V

## Thermal Information

Thermal Resistance (Typical)	$\theta_{JA}$ (°C/W)	$\theta_{JC}$ (°C/W)
5 Ld SOT-23 (Note 6, 7)	225	110
5 Ld SC-70 (Note 6)	206	N/A
6 Ld $\mu$ TDFN (Note 6)	240	N/A
Maximum Storage Temperature Range	-65°C to +150°C	
Pb-Free Reflow Profile	see link below <a href="http://www.intersil.com/pbfree/Pb-FreeReflow.asp">http://www.intersil.com/pbfree/Pb-FreeReflow.asp</a>	

## Operating Conditions

Temperature Range	-40°C to +125°C
Maximum Junction Temperature	140°C

**CAUTION:** Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

### NOTES:

- $\theta_{JA}$  is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief [TB379](#) for details.
- For  $\theta_{JC}$ , the "case temp" location is taken at the package top center.

**Electrical Specifications**  $V_+ = 5V$ ,  $V_- = 0V$ ,  $V_{CM} = 2.5V$ ,  $T_A = +25^\circ C$ ,  $R_L = \text{Open}$ , unless otherwise specified. **Boldface limits apply over the operating temperature range, -40°C to +125°C.**

## Applications Information

### Functional Description

The ISL28133 uses a proprietary chopper-stabilized architecture shown in the “Block Diagram” on page 2. The ISL28133 combines a 400kHz main amplifier with a very high open loop gain (174dB) chopper stabilized amplifier to achieve very low offset voltage and drift ( $2\mu\text{V}$ ,  $0.02\mu\text{V}/^\circ\text{C}$  typical) while consuming only  $18\mu\text{A}$  of supply current per channel.

This multi-path amplifier architecture contains a time continuous main amplifier whose input DC offset is corrected by a parallel-connected, high gain chopper stabilized DC correction amplifier operating at 100kHz. From DC to  $\sim 5\text{kHz}$ , both amplifiers are active with DC offset correction and most of the low frequency gain is provided by the chopper amplifier. A 5kHz crossover filter cuts off the low frequency amplifier path leaving the main amplifier active out to the 400kHz gain-bandwidth product of the device.

The key benefits of this architecture for precision applications are very high open loop gain, very low DC offset, and low  $1/f$  noise. The noise is virtually flat across the frequency range from a few mHz out to 100kHz, except for the narrow noise peak at the amplifier crossover frequency (5kHz).

### Rail-to-rail Input and Output (RRIO)

The RRIO CMOS amplifier uses parallel input PMOS and NMOS that enable the inputs to swing 100mV beyond either supply rail. The inverting and non-inverting inputs do not have back-to-back input clamp diodes and are capable of maintaining high input impedance at high differential input voltages. This is effective in eliminating output distortion caused by high slew-rate input signals.

The output stage uses common source connected PMOS and NMOS devices to achieve rail-to-rail output drive capability with 17mA current limit and the capability to swing to within 20mV of either rail while driving a  $10\text{k}\Omega$  load.

### IN+ and IN- Protection

All input terminals have internal ESD protection diodes to both positive and negative supply rails, limiting the input voltage to within one diode beyond the supply rails. For applications where either input is expected to exceed the rails by 0.5V, an external series resistor must be used to ensure the input currents never exceed 20mA (see Figure 35).

FIGURE 35. INPUT CURRENT LIMITING

### Layout Guidelines for High Impedance Inputs

To achieve the maximum performance of the high input impedance and low offset voltage of the ISL28133 amplifiers, care should be taken in the circuit board layout. The PC board

surface must remain clean and free of moisture to avoid leakage currents between adjacent traces. Surface coating of the circuit board will reduce surface moisture and provide a humidity barrier, reducing parasitic resistance on the board.

### High Gain, Precision DC-Coupled Amplifier

The circuit in Figure 36 implements a single-stage,  $10\text{kV}/\text{V}$  DC-coupled amplifier with an input DC sensitivity of under  $100\text{nV}$  that is only possible using a low  $V_{OS}$  amplifier with high open loop gain. This circuit is practical down to 1.8V due to its rail-to-rail input and output capability. Standard high gain DC amplifiers operating from low voltage supplies are not practical at these high gains using typical low offset precision op amps because the input offset voltage and temperature coefficient consume most of the available output voltage swing. For example, a typical precision amplifier in a gain of  $10\text{kV}/\text{V}$  with a  $\pm 100\mu\text{V}$   $V_{OS}$  and a temperature coefficient of  $0.5\mu\text{V}/^\circ\text{C}$  would produce a DC error at the output of  $>1\text{V}$  with an additional  $5\text{mV}/^\circ\text{C}$  of temperature dependent error. At 3V, this DC error consumes  $> 30\%$  of the total supply voltage, making it impractical to measure sub-microvolt low frequency signals.

The  $\pm 8\mu\text{V}$  max  $V_{OS}$  and  $0.075\mu\text{V}/^\circ\text{C}$  of the ISL28133 produces a temperature stable maximum DC output error of only  $\pm 80\text{mV}$  with a maximum temperature drift of  $0.75\text{mV}/^\circ\text{C}$ . The additional benefit of a very low  $1/f$  noise corner frequency and some feedback filtering enables DC voltages and voltage fluctuations well below  $100\text{nV}$  to be easily detected with a simple single stage amplifier.

FIGURE 36. HIGH GAIN, PRECISION DC-COUPLED AMPLIFIER

FIGURE 37. LONG TERM DRIFT ( $V_{OS}$  vs TIME) FOR 30 UNITS

FIGURE 38. LONG TERM DRIFT ( $V_{OS}$  vs TIME) FOR A SINGLE UNIT

### Long Term $V_{OS}$ Drift

Figure 37 shows a plot of daily  $V_{OS}$  drift measurements of 30 individual ISL28133 amplifiers over a continuous 572 day period at +25°C. The 30 units were connected in a gain of 10k, mounted on a single PC board and kept at room temp. The 30 amplifier outputs were measured daily by a DVM and scanner under computer control. The daily  $V_{OS}$  measurements were subtracted from the initial  $V_{OS}$  value to calculate the  $V_{OS}$  shift. The test board was powered from a UPS to maintain uninterrupted power to the test units. Three instances of lost measurement data ranging from 2 days to 2 weeks due to power loss to the measurement scanner were detected, and data were interpolated.

The change in amplifier  $V_{OS}$  over the 572 day period for all 30 amplifiers (see Figure 38) was less than  $\pm 100nV$ , and no clear  $V_{OS}$  long term drift trend was evident in the data. The excellent long term drift performance is a result of the chopper amplifier's ability to measure and correct  $V_{OS}$  errors, leaving only the  $V_{OS}$  error contribution due to changes in the long term stability of the external components (see Figure 39).

FIGURE 39. LONG TERM DRIFT TEST CIRCUIT

### ISL28133 SPICE Model

Figure 40 shows the SPICE model schematic and Figure 41 shows the net list for the ISL28133 SPICE model. The model is a simplified version of the actual device and simulates important parameters such as noise, Slew Rate, Gain and Phase. The model uses typical parameters from the ISL28133. The poles and zeros in the model were determined from the actual open and closed-loop gain and phase response. This enables the model to present an accurate AC representation of the actual device. The model is configured for ambient temperature of +25°C.

Figures 42 through 49 show the characterization vs simulation results for the Noise Density, Frequency Response vs Close Loop Gain, Gain vs Frequency vs CL and Large Signal Step Response (4V).

## Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to web to make sure you have the latest Rev.

DATE	REVISION	CHANGE
September 16, 2015	FN6560.7	Updated Ordering Information table on page 2. Updated About Intersil Verbiage.
February 19, 2014	FN6560.6	Updated location of note references. Added ISL28133CSENSEV1Z to ordering information table on page 2.
May 31, 2011	FN6560.5	Changed minimum operating supply voltage from +1.65V to +1.8V throughout entire datasheet. Added Tjc information for 5 Ld SOT-23 package in Thermal information on page 5.
February 1, 2011	FN6560.4	-Converted to Updated Intersil Template. -Page 1 Graphics numbered as Figures 1 and 2. -Updated Ordering Information on page 2 by adding part ISL28133FHZ-T7A. -Changed Note on page 5, which read "Parameters with MIN and/or MAX limits are 100% tested at +25°C, unless otherwise specified. Temperature limits established by characterization and are not production tested." to "Compliance to datasheet limits is assured by one or more methods: production test, characterization and/or design." -Added two Long Term Drift Curves (Figures 37 and 38) and section "Long Term VOS Drift" on page 12 -Replaced POD MDP0038 (no dimension changes), now obsolete with P5.064A.
May 3, 2010	FN6560.3	Title Page 1: Replaced "Zero-Drift" with "Chopper Stabilized" for title and part description On page 3: Pin Configuration: MTDFN -> uTDFN On page 7: Figure 12: Changed 0.1Hz to 0.01Hz in Figure caption On page 11: In "Functional Description"; Paragraph 1, 2nd sentence: Changed text from "...open loop gain (200dB)..." -to- "...open loop gain (174dB)..." Changed TYP for "Open Loop Gain" on page 4 from 200dB to 174dB. On page 11: In "High Gain, Precision DC-Coupled Amplifier"; Paragraph 2, 1st sentence: Changed text from "...DC output error of only ±80mV with a maximum temperature drift of 0.75µV/°C." to "... DC output error of only ±80mV with a maximum temperature drift of 0.75mV/C."
February 24, 2010		Removed "Coming Soon" from ISL28133EVAL1Z in the ordering information table on pg 2.
September 24, 2009	FN6560.2	Converted to new Intersil template. Removed ISL28233 and ISL28433 from data sheet, added Applications, Related Literature, Typical Application Circuit, Performance Curve, updated ordering information by removing "coming soon" on SC70 and uTDFN packages and adding Eval board listed as "coming soon". Added Block Diagram, Changed in Abs Max Rating Voltage from "5.75V" to "6.5V". Removed Tjc from Thermal Information until provided by packaging scheduled for 9-11-09. Changed Low Offset "drift" to Low Offset "TC", added Max Junction Temp 140C, added SPICE model and simulation results, removed supply current graph at +3V, re-ordered typical performance curves, removed guard ring information from application section. Added Revision History and Products Information
May 29, 2009	FN6560.1	Page 4: Removed the RL = 100 Curve from Figures 3, 4 and 5. Page 1: Under Features, removed the word "Output" from "Low Output Noise"
March 25, 2009	FN6560.0	Initial Release

## About Intersil

Intersil Corporation is a leading provider of innovative power management and precision analog solutions. The company's products address some of the largest markets within the industrial and infrastructure, mobile computing and high-end consumer markets.

For the most updated datasheet, application notes, related documentation and related parts, please see the respective product information page found at [www.intersil.com](http://www.intersil.com).

You may report errors or suggestions for improving this datasheet by visiting [www.intersil.com/ask](http://www.intersil.com/ask).

Reliability reports are also available from our website at [www.intersil.com/support](http://www.intersil.com/support)
