# Addendum to MC68HC05F5 HCMOS Microcontroller Unit Technical Data

This addendum adds information to MC68HC05F5 Technical Data (Motorola document number MC68HC05F5/D) as follows:

Page 1-1, SECTION 1 GENERAL DESCRIPTION, the following data replaces the second paragraph:

From: On-chip memory of the MC68HC05F5 includes 5632 bytes of user ROM and 224 bytes of user RAM.

To: On-chip memory of the MC68HC05F5 includes 5744 bytes of user ROM and 224 bytes of user RAM.

Page 1-1, 1.1 Features, the following data replaces the third and eighth bulleted MCU features:

From: 5632 Bytes of User ROM including 8 Locations for User Vectors

To: 5744 Bytes of User ROM including 12 Locations for User Vectors

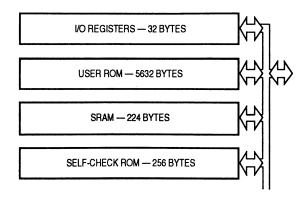

From: Fully Static Operation with no Minimum Clock Speed

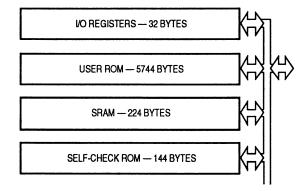

To: Fully Static Operation with no Minimum Clock Speed (Digital Section Only)

Specifications and information herein are subject to change without notice.

Clear TOF by writing a logic one to the TOFR bit.

To:

TOF — Timer Overflow Flag

Clear TOF by writing a logic zero to the TOF bit.

From:

RTIF — Real-Time Interrupt Flag

Clear RTIF by writing a logic one to the RTIFR bit.

To:

RTIF — Real-Time Interrupt Flag

Clear RTIF by writing a logic zero to the RTIF bit.

From:

TOFR — Timer Overflow Flag Reset

Writing a logic one to this write-only bit clears the TOF bit. TOFR always reads as logic zero.

To: [DELETED]

From:

RTIFR — Real-Time Interrupt Flag Reset

Setting this write-only bit clears the RTIF bit. RTIFR always reads as logic zero.

To: [DELETED]

Page 9-1, 9.1 DTMF Receiver Operation, add the following note after Figure 9-1. DTMF Keypad:

#### NOTE

The DTMF receiver is designed to operate at internal bus speeds of 2.0 MHz only. The CLK bit in the DTMF Receiver Control Register (see Figure 9-5. DTMF Receiver Control Register (DCR)) is a provision for future digital bus speeds of 4.0 MHz.

Page 10-1, 10.1 Self-Check Tests, correct as follows:

#### From:

To check for proper MCU operation, the self-check ROM performs the following tests:

- I/O test A functional exercise of ports A, B, C, and D
- RAM test A complement test of each RAM byte
- Timer test A test of the counter register and the TOF and RTIF flags
- ROM test An exclusive OR odd parity check
- DTMF test A test of DTMF digital logic
- Interrupt test A test of external and timer interrupts

#### NOTES:

- 1. With no DTMF signal applied to the  ${\bf A_{IN}}$  pin, the LEDs display the self-check code continuously.
- With a DTMF signal applied to the A<sub>IN</sub> pin, the LEDs periodically pause the self-check code display to display the DTMF receiver data code for about one second. (See Table 9-1.)
