## Description

T0534TL is an ultra-low capacitance Transient Voltage Suppressor (TVS) designed to provide electrostatic discharge (ESD) protection for high-speed data interfaces. With typical capacitance of 0.5pF only, T0534TL is designed to protect parasitic-sensitive system against over-voltage and over-current transient events. It complies with IEC61000-4-2(ESD), Level X ( $\pm 25\text{kV}$  air,  $\pm 17\text{kV}$  contact discharge), IEC 61000-4-4 (electrical fast transient - EFT) (40A, 5/50ns), very fast charged device model (CDM) ESD and cable discharge event (CBE), etc.

T0534TL user SOT23-6L package. Each T0534TL device can protect four high-speed data lines. The combined features of low capacitance, small size and high ESD robustness make T0534TL ideal for high-speed data ports and high-frequency lines (e.g., HDMI & DVI) applications. The low clamping voltage of the T0534 TL guarantees a minimum stress on the protected IC.

## Application Information

### Pin Connection in PCB

T0534TL is capable to provide ESD protection for four data lines simultaneously. The pin connection is shown in Figure 1.

Four parallel data lines, from inner IC to I/O port connector, could connect to T0534TL four I/O pins directly. Pin 2 of T0534TL is the negative reference pin, which should connect to the GND of PCB. The connection wires should be as short as possible in order to minimize the parasitic inductance.

### PCB Layout Guidelines

For optimum ESD protection and the whole circuit performance, the following PCB layout guidelines are recommended:

- ❑ T0534TL GND pin to the PCB GND rail path should be as short as possible. It could reduce the ESD transient return path to GND.
- ❑ The vias connecting T0534TL VCC & GND pins to the PCB VCC & GND should be wide.
- ❑ Place T0534TL as close to the connector port as possible. It could reduce the parasitic inductance and restrict ESD coupling into adjacent traces.
- ❑ Avoid running critical signals near board edges.
