ZENER DIODES RD2.0E to RD120E

500 mW PLANAR TYPE SILICON ZENER DIODES

The RD2.0E to RD120E are zener diodes with an allowable dissipation of 500 mW and a planar type glass sealed DHD (double heatsink diode) structure.

FEATURES

- The zener voltage series has a wide voltage range of 2 V to 120 V and is ideal for standardization.
- The E24 series is employed for the zener voltage nominal value.

ORDERING INFORMATION

Any of the B1 to B7 voltage classifications are available for customers who request the B grade product of the RD2.0E to RD39E.

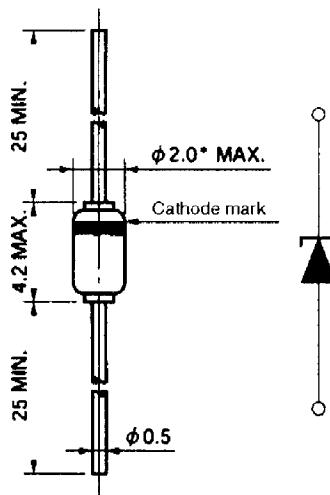

APPLICATIONS

- Zener voltage and constant-current circuit
- Waveform clipper circuit and limiter circuit
- Surge absorption circuit

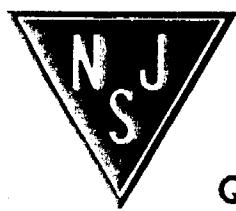

ABSOLUTE MAXIMUM RATINGS ($T_a = 25^\circ\text{C}$)

Parameter	Symbol	Ratings	Unit	Remarks
Power dissipation	P	500	mW	
Junction temperature	T_j	175	$^\circ\text{C}$	
Forward current	I_F	200	mA	
Storage temperature	T_{stg}	-65 to +175	$^\circ\text{C}$	
Surge reverse power	P_{RSM}	100 ($t = 100 \mu\text{s}$)	W	Refer to Figure 6.

PACKAGE DRAWING (UNIT: mm)

Marking color: Black
JEDEC: DO-35

NJ Semi-Conductors reserves the right to change test conditions, parameter limits and package dimensions without notice. Information furnished by NJ Semi-Conductors is believed to be both accurate and reliable at the time of going to press. However, NJ Semi-Conductors assumes no responsibility for any errors or omissions discovered in its use. NJ Semi-Conductors encourages customers to verify that datasheets are current before placing orders.

Notes 1. The zener voltage (Vz) of the B and B1 to B7 grades is tested for 40 ms after power ON.

2. The operation resistance (Zz, Zzk) is tested by superimposing a micro AC on the standard current (Iz).

3. The B grade is a composition of the B1 to B7 grades. Any of the B1 to B7 voltage classifications are available for customers who request the B grade product.
