

TPS22976 5.7-V, 6-A, 14-mΩ On-Resistance Dual-Channel Load Switch

1 Features

- Integrated Dual-Channel Load Switch
- Input Voltage Range: 0.6 V to V_{BIAS}
- V_{BIAS} Voltage Range: 2.5 V to 5.7 V
- On-resistance
 - $R_{ON} = 14\text{ m}\Omega$ (Typical)
at $V_{IN} = 0.6\text{ V to }5\text{ V}$, $V_{BIAS} = 5\text{ V}$
 - $R_{ON} = 18\text{ m}\Omega$ (Typical)
at $V_{IN} = 0.6\text{ V to }2.5\text{ V}$, $V_{BIAS} = 2.5\text{ V}$
- 6-A Maximum Continuous Switch Current per Channel
- Quiescent Current
 - 37 μA (Typical, Both Channels)
at $V_{IN} = V_{BIAS} = 5\text{ V}$
 - 35 μA (Typical, Single Channel)
at $V_{IN} = V_{BIAS} = 5\text{ V}$
- Control Input Threshold Enables Use of 1.2-, 1.8-, 2.5-, and 3.3-V Logic
- Configurable Rise Time
- Thermal Shutdown
- Quick Output Discharge (QOD) (Optional)
- SON 14-Pin Package with Thermal Pad
- ESD Performance Tested per JESD 22
 - 2-kV HBM and 1-kV CDM

2 Applications

- Ultrabook™
- Notebooks and Netbooks
- Tablet PCs
- Set-top Boxes and Residential Gateways
- Telecom Systems
- Solid-State Drives (SSD)

3 Description

The TPS22976 product family consists of two devices: TPS22976 and TPS22976N. Each device is a dual-channel load switch with controlled turnon. The device contains two N-channel MOSFETs that can operate over an input voltage range of 0.6 V to 5.7 V, and can support a maximum continuous current of 6 A per channel. Each switch is independently controlled by an on and off input (ON1 and ON2), which can interface directly with low-voltage control signals. The TPS22976 is capable of thermal shutdown when the junction temperature is above the threshold, turning the switch off. The switch turns on again when the junction temperature stabilizes to a safe range. The TPS22976 also offers an optional integrated 230- Ω on-chip load resistor for quick output discharge when the switch is turned off.

The TPS22976 is available in a small, space-saving 3-mm \times 2-mm 14-SON package (DPU) with integrated thermal pad allowing for high power dissipation. The device is characterized for operation over the free-air temperature range of -40°C to 105°C .

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS22976	WSON (14)	3.00 mm \times 2.00 mm
TPS22976N		

(1) For all available packages, see the orderable addendum at the end of the data sheet.

5 Device Comparison Table

DEVICE	R_{ON} AT $V_{IN} = V_{BIAS} = 5\text{ V}$ (TYPICAL)	QUICK OUTPUT DISCHARGE	MAXIMUM OUTPUT CURRENT	ENABLE
TPS22976	14 m Ω	Yes	6 A	Active high
TPS22976N	14 m Ω	No	6 A	Active high

6 Pin Configuration and Functions

Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
1	VIN1	I	Switch 1 input. Recommended voltage range for these pins for optimal R_{ON} performance is 0.6 V to V_{BIAS} . Place an optional decoupling capacitor between these pins and GND to reduce V_{IN1} dip during turnon of the channel. See the Application Information section for more information
2			
3	ON1	I	Active-high switch 1 control input. Do not leave floating
4	VBIAS	I	Bias voltage. Power supply to the device. Recommended voltage range for this pin is 2.5 V to 5.7 V. See the Application Information section
5	ON2	I	Active-high switch 2 control input. Do not leave floating
6	VIN2	I	Switch 2 input. Recommended voltage range for these pins for optimal R_{ON} performance is 0.6 V to V_{BIAS} . Place an optional decoupling capacitor between these pins and GND to reduce V_{IN2} dip during turnon of the channel. See the Application Information section for more information
7			
8	VOUT2	O	Switch 2 output
9			
10	CT2	O	Switch 2 slew rate control. Can be left floating. Capacitor used on this pin must be rated for a minimum of 25 V for desired rise time performance
11	GND	—	Ground
12	CT1	O	Switch 1 slew rate control. Can be left floating. Capacitor used on this pin must be rated for a minimum of 25 V for desired rise time performance
13	VOUT1	O	Switch 1 output
14			
—	Thermal pad	—	Thermal pad (exposed center pad) to alleviate thermal stress. Tie to GND. See the Layout section for layout guidelines

7 Specifications

7.1 Absolute Maximum Ratings

Over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT ⁽²⁾
V _{IN1,2}	Input voltage	-0.3	6	V
V _{OUT1,2}	Output voltage	-0.3	6	V
V _{ON1,2}	ON-pin voltage	-0.3	6	V
V _{BIAS}	Bias voltage	-0.3	6	V
I _{MAX}	Maximum continuous switch current per channel		6	A
I _{PLS}	Maximum pulsed switch current per channel, pulse <300 μs, 3% duty cycle		8	A
T _J	Maximum junction temperature		125	°C
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to network ground terminal.

7.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

			MIN	MAX	UNIT
V _{IN1,2}	Input voltage		0.6	V _{BIAS}	V
V _{BIAS}	Bias voltage		2.5	5.7	V
V _{ON1,2}	ON voltage		0	5.7	V
V _{OUT1,2}	Output voltage			V _{IN}	V
V _{IH}	High-level input voltage, ON	V _{BIAS} = 2.5 V to 5.7 V	1.2	5.7	V
V _{IL}	Low-level input voltage, ON	V _{BIAS} = 2.5 V to 5.7 V	0	0.5	V
C _{IN1,2}	Input capacitor		1 ⁽¹⁾		μF
T _A	Operating free-air temperature ⁽²⁾		-40	105	°C

- (1) See the [Input Capacitor \(Optional\)](#) section.
- (2) In applications where high power dissipation and/or poor package thermal resistance is present, the maximum ambient temperature may have to be derated. Maximum ambient temperature [T_{A(max)}] is dependent on the maximum operating junction temperature [T_{J(max)}], the maximum power dissipation of the device in the application [P_{D(max)}], and the junction-to-ambient thermal resistance of the part/package in the application (θ_{JA}), as given by the following equation: T_{A(max)} = T_{J(max)} - (θ_{JA} × P_{D(max)})

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TPS22976	
		DPU (WSON)	UNIT
		14 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	50.8	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	52.3	°C/W
R _{θJB}	Junction-to-board thermal resistance	18.4	°C/W
ψ _{JT}	Junction-to-top characterization parameter	1.6	°C/W
ψ _{JB}	Junction-to-board characterization parameter	18.6	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

Thermal Information (continued)

THERMAL METRIC ⁽¹⁾		TPS22976		UNIT
		DPU (WSON)		
		14 PINS		
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	6.5		°C/W

7.5 Electrical Characteristics — $V_{BIAS} = 5\text{ V}$

Unless otherwise noted, the specifications in the following table applies where $V_{BIAS} = 5\text{ V}$. Typical values are for $T_A = 25^\circ\text{C}$

PARAMETER		TEST CONDITIONS	T_A	MIN	TYP	MAX	UNIT
POWER SUPPLIES AND CURRENTS							
$I_{Q,VBias}$	V_{BIAS} quiescent current (both channels)	$I_{OUT1} = I_{OUT2} = 0\text{ mA}$, $V_{IN1,2} = V_{ON1,2} = 5\text{ V}$	-40°C to $+85^\circ\text{C}$	37	48		μA
			-40°C to $+105^\circ\text{C}$		49		
$I_{Q,VBias}$	V_{BIAS} quiescent current (single channel)	$I_{OUT1} = I_{OUT2} = 0\text{ mA}$, $V_{ON2} = 0\text{ V}$ $V_{IN1,2} = V_{ON1} = 5\text{ V}$	-40°C to $+85^\circ\text{C}$	35	43		μA
			-40°C to $+105^\circ\text{C}$		44		
$I_{SD,VBias}$	V_{BIAS} shutdown current	$V_{ON1,2} = 0\text{ V}$, $V_{VOUT1,2} = 0\text{ V}$	-40°C to $+105^\circ\text{C}$	1.37	2.3		μA
$I_{SD,VIN}$	V_{IN} shutdown current (per channel)	$V_{ON} = 0\text{ V}$, $V_{OUT} = 0\text{ V}$	$V_{IN} = 5\text{ V}$	-40°C to $+85^\circ\text{C}$.005	5.5	μA
				-40°C to $+105^\circ\text{C}$		11.3	
			$V_{IN} = 3.3\text{ V}$	-40°C to $+85^\circ\text{C}$.002	1.4	
				-40°C to $+105^\circ\text{C}$		3.4	
			$V_{IN} = 1.8\text{ V}$	-40°C to $+85^\circ\text{C}$.002	0.5	
			-40°C to $+105^\circ\text{C}$		1.4		
			$V_{IN} = 0.6\text{ V}$	-40°C to $+85^\circ\text{C}$.001	0.3	
				-40°C to $+105^\circ\text{C}$		0.8	
I_{ON}	ON-pin input leakage current	$V_{ON} = 5.5\text{ V}$	-40°C to $+105^\circ\text{C}$		0.1		μA
RESISTANCE CHARACTERISTICS							
R_{ON}	On-state resistance (per channel)	$I_{OUT} = -200\text{ mA}$	$V_{IN} = 5\text{ V}$	25°C	14	18	$\text{m}\Omega$
				-40°C to $+85^\circ\text{C}$		22	
				-40°C to $+105^\circ\text{C}$		23	
			$V_{IN} = 3.3\text{ V}$	25°C	14	18	
				-40°C to $+85^\circ\text{C}$		22	
				-40°C to $+105^\circ\text{C}$		23	
			$V_{IN} = 1.8\text{ V}$	25°C	14	18	
				-40°C to $+85^\circ\text{C}$		22	
				-40°C to $+105^\circ\text{C}$		23	
			$V_{IN} = 1.2\text{ V}$	25°C	14	18	
				-40°C to $+85^\circ\text{C}$		22	
				-40°C to $+105^\circ\text{C}$		23	
			$V_{IN} = 1.05\text{ V}$	25°C	14	18	
				-40°C to $+85^\circ\text{C}$		22	
				-40°C to $+105^\circ\text{C}$		23	
$V_{IN} = 0.6\text{ V}$	25°C	14	18				
	-40°C to $+85^\circ\text{C}$		22				
	-40°C to $+105^\circ\text{C}$		23				
$V_{ON,HYS}$	ON-pin hysteresis	$V_{IN} = 5\text{ V}$	25°C	90			mV
$R_{PD}^{(1)}$	Output pulldown resistance	$V_{IN} = V_{OUT} = 5\text{ V}$, $V_{ON} = 0\text{ V}$	-40°C to $+105^\circ\text{C}$	230	280		Ω
T_{SD}	Thermal shutdown	Junction temperature rising	—	160			°C
$T_{SD,HYS}$	Thermal-shutdown hysteresis	Junction temperature falling	—	20			°C

(1) Not present in TPS22976N

7.6 Electrical Characteristics — $V_{BIAS} = 2.5\text{ V}$

Unless otherwise noted, the specifications in the following table applies where $V_{BIAS} = 2.5\text{ V}$. Typical values are for $T_A = 25^\circ\text{C}$

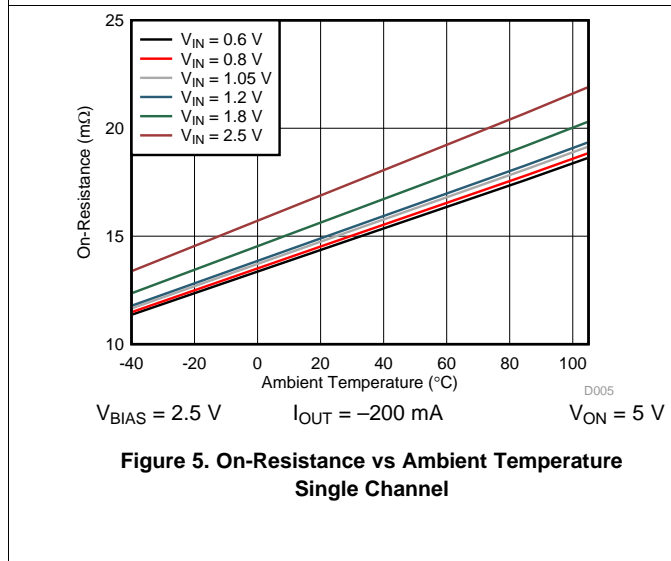

PARAMETER		TEST CONDITIONS	T_A	MIN	TYP	MAX	UNIT
POWER SUPPLIES AND CURRENTS							
$I_{Q,VBIAS}$	V_{BIAS} quiescent current (both channels)	$I_{OUT1} = I_{OUT2} = 0\text{ mA}$, $V_{IN1,2} = V_{ON1,2} = 2.5\text{ V}$	-40°C to $+85^\circ\text{C}$	15	20		μA
			-40°C to $+105^\circ\text{C}$		20		
$I_{Q,VBIAS}$	V_{BIAS} quiescent current (single channel)	$I_{OUT1} = I_{OUT2} = 0\text{ mA}$, $V_{ON2} = 0\text{ V}$ $V_{IN1,2} = V_{ON1} = 2.5\text{ V}$	-40°C to $+85^\circ\text{C}$	14	19		μA
			-40°C to $+105^\circ\text{C}$		19

Figure 33. t_{ON} and t_{OFF} Waveforms

9 Detailed Description

9.1 Overview

The TPS22976 is a 5.7-V, dual-channel, 14-m Ω (typical) R_{ON} load switch in a 14-pin WSON package. Each channel can support a maximum continuous current of 6 A and is controlled by an on and off GPIO-compatible input. To reduce the voltage drop in high current rails, the device implements N-channel MOSFETs. Note that the ON pins must be connected and cannot be left floating. The device has a configurable slew rate for applications that require specific rise-time, which controls the inrush current. By controlling the inrush current, power supply sag can be reduced during turnon. Furthermore, the slew rate is proportional to the capacitor on the CT pin. See the [Adjustable Rise Time](#) section to determine the correct CT value for a desired rise time.

The internal circuitry is powered by the V_{BIAS} pin, which supports voltages from 2.5 V to 5.7 V. This circuitry includes the charge pump, QOD (optional), and control logic. When a voltage is applied to V_{BIAS} , and the $ON_{1,2}$ pins transition to a low state, the QOD functionality is activated. This connects V_{OUT1} and V_{OUT2} to ground through the on-chip resistor. The typical pulldown resistance (R_{PD}) is 230 Ω .

During the off state, the device prevents downstream circuits from pulling high standby current from the supply. The integrated control logic, driver, power supply, and output discharge FET eliminates the need for any external components, reducing solution size and bill of materials (BOM) count.

9.2 Functional Block Diagram

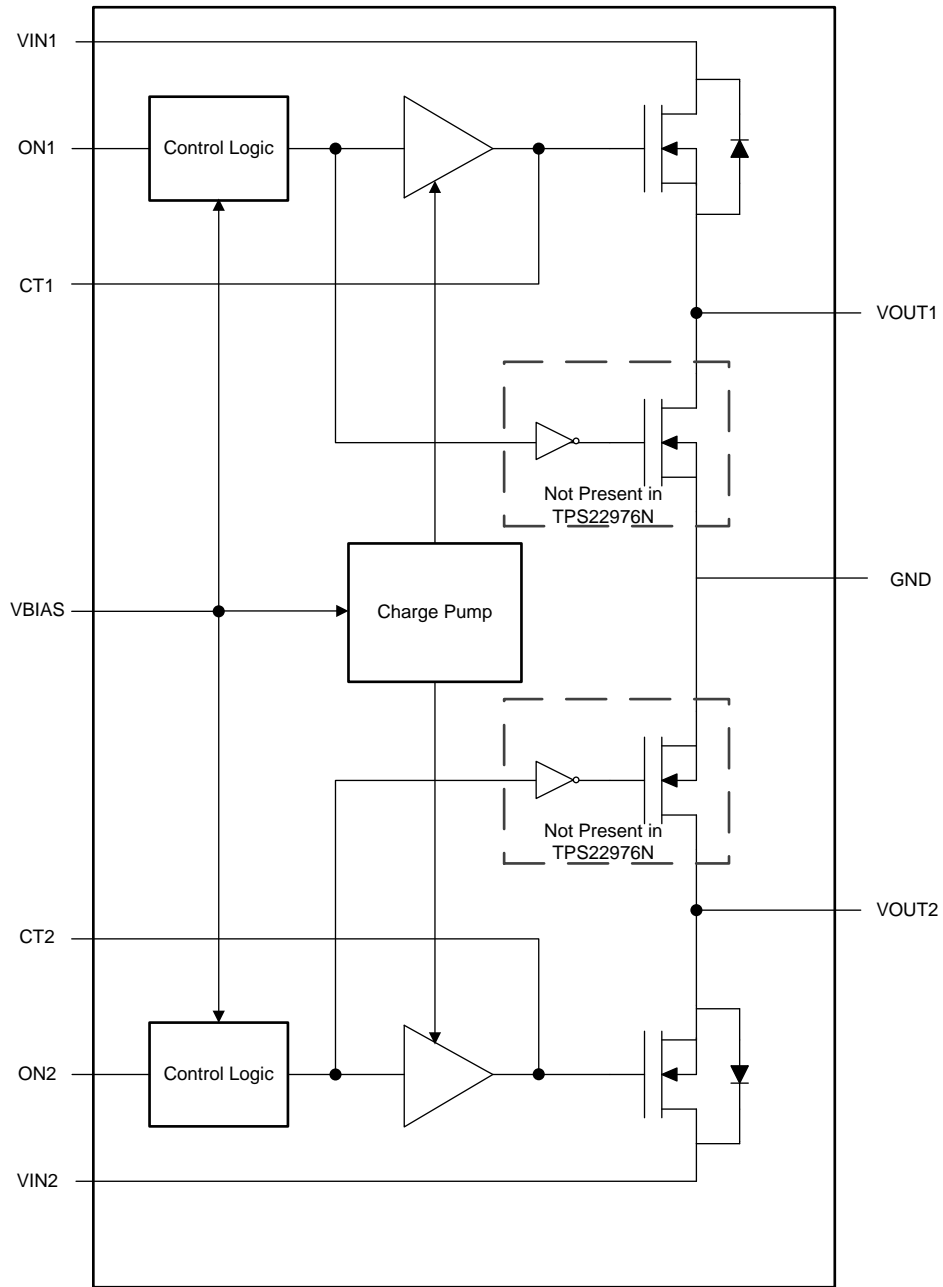

Figure 34. TPS22976 Functional Block Diagram

9.3 Feature Description

9.3.1 ON and OFF Control

The ON pins control the state of the switch. Asserting ON high enables the switch. ON is active high with a low threshold, making it capable of interfacing with low-voltage signals. The ON pin is compatible with standard GPIO logic threshold. It can be used with any microcontroller with 1.2 V or higher GPIO voltage. This pin cannot be left floating and must be tied either high or low for proper functionality.

Feature Description (continued)

9.3.2 Input Capacitor (Optional)

To limit the voltage drop on the input supply caused by transient inrush currents when the switch turns on into a discharged load capacitor, a capacitor needs to be placed between VIN and GND. A 1- μ F ceramic capacitor, C_{IN}, placed close to the pins is usually sufficient. Higher values of C_{IN} can be used to further reduce the voltage drop during high-current application. When switching heavy loads, it is recommended to have an input capacitor about 10 times higher than the output capacitor to avoid excessive voltage drop.

9.3.3 Output Capacitor (Optional)

Due to the integrated body diode in the NMOS switch, a C_{IN} greater than C_L is highly recommended. A C_L greater than C_{IN} can cause V_{OUT} to exceed V_{IN} when the system supply is removed. This could result in current flow through the body diode from V_{OUT} to V_{IN}. A C_{IN} to C_L ratio of 10 to 1 is recommended for minimizing V_{IN} dip caused by inrush currents during startup, however a 10 to 1 ratio for capacitance is not required for proper functionality of the device. A ratio smaller than 10 to 1 (such as 1 to 1) could cause slightly more V_{IN} dip upon turnon due to inrush currents. This can be mitigated by increasing the capacitance on the CT pin for a longer rise time. (See the [Adjustable Rise Time](#) section).

9.3.4 Quick Output Discharge (QOD) (Not Present in TPS22976N)

The TPS22976 includes a QOD feature. When the switch is disabled, an internal discharge resistance is connected between V_{OUT} and GND to remove the remaining charge from the output. This resistance prevents the output from floating while the switch is disabled. For best results, it is recommended that the device gets disabled before V_{BIAS} falls below the minimum recommended voltage.

9.3.5 Thermal Shutdown

Thermal Shutdown protects the part from internally or externally generated excessive temperatures. When the device temperature exceeds T_{SD} (typical 160°C), the switch is turned off. The switch automatically turns on again if the temperature of the die drops 20 degrees below the T_{SD} threshold.

9.4 Device Functional Modes

[Table 1](#) lists the TPS22976 functions.

Table 1. TPS22976 Functions Table

H	On	VIN

10 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

10.1 Application Information

This section highlights some of the design considerations for implementing the device in various applications. A PSPICE model for this device is also available on the product page for additional information.

10.1.1 Parallel Configuration

To increase current capabilities and to lower R_{ON} , both channels can be placed in parallel as seen in [Figure 35](#). With this configuration, the CT1 and CT2 pins can be tied together to use one capacitor, CT.

See the [TPS22966 Dual-Channel Load Switch in Parallel Configuration](#) application report and [Parallel Load Switches for Higher Output Current & Reduced ON-Resistance Design Guide](#) for more information.

Copyright © 2016, Texas Instruments Incorporated

Figure 35. Parallel Configuration

10.1.2 Standby Power Reduction

Battery powered end equipments often have strict power budgets, in which there is a need to reduce current consumption. The TPS22976 significantly reduces system current consumption by disabling the supply voltage to subsystems in standby states. Alternatively, the TPS22976 reduces the leakage current overhead of the modules in standby mode as achieved in [Figure 36](#). Note that standby power reduction can be achieved on either channel, as well as dual-channel operation.

Application Information (continued)

Copyright © 2016, Texas Instruments Incorporated

Figure 36. Standby Power Reduction

10.1.3 Power Supply Sequencing without GPIO Input

Sequential startup of several subsystems is often burdensome and adds complexity for several end equipments. The TPS22976 provides a power sequencing solution that reduces the overall system complexity, as seen in Figure 37.

Copyright © 2016, Texas Instruments Incorporated

Figure 37. Power Sequencing without a GPIO Input

Application Information (continued)

10.1.4 Reverse Current Blocking

Reverse current blocking is often desired in specific applications, as it prevents current from flowing from the output to the input of the load switch when the device is disabled. With the configuration illustrated in [Figure 38](#), the TPS22976 can be converted into a single-channel switch with reverse current blocking. VIN1 or VIN2 can be used as the input and VIN2 or VIN1 as the output.

Figure 38. Reverse Current Blocking

10.2 Typical Application

This application demonstrates how the TPS22976 can be used to limit the inrush current when powering on downstream modules.

Copyright © 2016, Texas Instruments Incorporated

Figure 39. Typical Application Circuit

Typical Application (continued)

10.2.1 Design Requirements

Table 3 shows the TPS22976 design parameters.

Table 3. Design Parameters

DESIGN PARAMETER	VALUE
Input voltage	3.3 V
Bias voltage	5 V
Load capacitance (C _L)	22 μF
Maximum acceptable inrush current	400 mA

10.2.2 Detailed Design Procedure

10.2.2.1 Inrush Current

When the switch is enabled, the output capacitors must be charged up from 0 V to the set value (3.3 V in this example). This charge arrives in the form of inrush current. Inrush current can be calculated using [Equation 1](#).

$$\text{Inrush Current} = C \times dV/dt$$

where

- C is the output capacitance
 - dV is the output voltage
 - dt is the rise time
- (1)

The TPS22976 offers adjustable rise time for VOUT. This feature allows the user to control the inrush current during turnon. The appropriate rise time can be calculated using [Table 3](#) and the inrush current equation. See [Equation 2](#) and [Equation 3](#).

$$400 \text{ mA} = 22 \text{ } \mu\text{F} \times 3.3 \text{ V}/dt \quad (2)$$

$$dt = 181.5 \text{ } \mu\text{s} \quad (3)$$

To ensure an inrush current of less than 400 mA, choose a CT value that yields a rise time of more than 181.5 μs. See the oscilloscope captures in the [Application Curves](#) section for an example of how the CT capacitor can be used to reduce inrush current.

10.2.2.2 Adjustable Rise Time

A capacitor to GND on the CT pins sets the slew rate for each channel. To ensure desired performance, a capacitor with a minimum voltage rating of 25 V must be used on either CT pins. An approximate formula for the relationship between CT and slew rate is shown in Equation 4.

Equation 4 accounts for 10% to 90% measurement on V_{OUT} and does not apply for $CT = 0$ pF. Use Table 4 to determine rise times for when $CT = 0$ pF):

$$SR = 0.42 \times CT + 66$$

where

- SR is the slew rate (in $\mu\text{s}/\text{V}$)
 - CT is the capacitance value on the CT pin (in pF)
 - The units for the constant 66 is in $\mu\text{s}/\text{V}$.
- (4)

Rise time can be calculated by multiplying the input voltage by the slew rate. Table 4 shows rise time values measured on a typical device. Rise times shown below are only valid for the power-up sequence where V_{IN} and V_{BIAS} are already in steady state condition, and the ON pin is asserted high.

Table 4. Rise Time Values

CT (pF)	RISE TIME (μs) 10% - 90%, $C_L = 0.1 \mu\text{F}$, $C_{IN} = 1 \mu\text{F}$, $R_L = 10 \Omega$ ⁽¹⁾						
	5 V	3.3 V	1.8 V	1.5 V	1.2 V	1.05 V	0.6 V
0	149	112	77	70	60	56	42
220	548	388	236	206	173	154	103

10.2.3 Application Curves

$V_{BIAS} = 5$ V ; $V_{IN} = 3.3$ V ; $C_L = 22 \mu\text{F}$

Figure 40. Inrush Current with CT = 0 pF

Figure 41. Inrush Current with CT = 220 pF

11 Power Supply Recommendations

The device is designed to operate from a V_{BIAS} range of 2.5 V to 5.7 V and a V_{IN} range of 0.6 V to V_{BIAS} .

12 Layout

12.1 Layout Guidelines

For best performance, all traces must be as short as possible. To be most effective, the input and output capacitors must be placed close to the device to minimize the effects that parasitic trace inductances may have on normal operation. Using wide traces for V_{IN} , V_{OUT} , and GND helps minimize the parasitic electrical effects along with minimizing the case to ambient thermal impedance.

12.2 Layout Example

Notice the thermal vias located under the exposed thermal pad of the device. This allows for thermal diffusion away from the device.

Figure 42. PCB Layout Example

12.3 Power Dissipation

The maximum IC junction temperature must be restricted to 125°C under normal operating conditions. To calculate the maximum allowable power dissipation, $P_{D(max)}$ for a given output current and ambient temperature, use Equation 5.

$$P_{D(max)} = \frac{T_{J(max)} - T_A}{\theta_{JA}}$$

where

- $P_{D(max)}$ is the maximum allowable power dissipation
- $T_{J(max)}$ is the maximum allowable junction temperature (125°C for the TPS22976)
- T_A is the ambient temperature of the device
- θ_{JA} is the junction to air thermal impedance. See the [Thermal Information](#) section. This parameter is highly dependent upon board layout.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

THERMAL PAD MECHANICAL DATA

DPU (R-PWSON-N14)

PLASTIC SMALL OUTLINE NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

Bottom View

Exposed Thermal Pad Dimensions

4211395/C 04/15

NOTE: All linear dimensions are in millimeters

DPU (R-PWSON-N14)

PLASTIC SMALL OUTLINE NO-LEAD

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-7351 is recommended for alternate designs.
 - This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
