## **Switching Regulator Control IC Developed Realizing 4-channel output and low-voltage operation**

**LA5627W**

### **Overview**

There has been increasing demand for long time operation in addition to compact size and light weight for portable equipment. The challenge is to reduce voltage for long time operation while at the same time reducing the number of batteries. It is also necessary to supply different voltages for circuits depending on the equipment, or higher voltage than that of batteries. This requires low-voltage operation switching regulator control ICs that can supply the voltage required by circuits, while enabling long time operation through efficient battery use.

The LA5627W switching regulator control IC developed by Sanyo provides a stable output voltage thanks to its 1.8V power supply voltage (VCC) operation even when the battery runs down. Using an auxiliary power supply for VCC supply, operation as low as 1.2V (industry's lowest voltage for 4-channel output type) is possible, enabling efficient battery use. The output voltage for each of the 4 channels can be individually adjusted with an external resistor provided for each. Moreover, ON/OFF can be independently controlled through a microcontroller, making this switching regulator control IC ideal for portable equipment requiring switching regulator control enabling only the required power supply to be switched ON according to the equipment.

### **Features**

- 1.8V low-voltage operation is supported. (Operation from as low as 1.2V is possible using an auxiliary power supply.)
- Standby (ON/OFF) function built-in for each channel
- Output voltage settable with external resistor
- Package: SQFP48

## Sample Availability

Sample of the LA5627W will be available in March 1999; production quantities will be anticipated in April 1999.

FEBRUARY 1, 1999

- Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.
- SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.
- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
