General Description

The EL2039 and EL2040 monolithic operational amplifiers are pin compatible with the HA2539 and HA2540, but have patented circuitry for improved dynamic performance and DC accuracy, and a typical power reduction of 35%. Additionally, these Elantec amplifiers are stable when driving capacitive loads and are well behaved when the output is overdriven. Both devices are compensated for closed loop gains \geq 10. The EL2039 is the fastest of the series with a 600 V/ μ s slew rate and 600 MHz gain-bandwidth product. The EL2040 has a 400 V/ μ s slew rate and 400 MHz gain-bandwidth product. The EL2039 and EL2040 are fabricated with Elantec's Complementary Bipolar process and are zener zap trimmed for low offset voltage.

Elantec's high speed amplifiers are widely used in military, video and medical applications. They are especially suited for high speed video amplifiers, pulse detectors, and wide bandwidth filters.

Elantec's EL2039C and EL2040C comply with MIL-I-45208A and other applicable quality specifications. For information on Elantec's processing, see the Elantec document, QRA-1: *Elantec's Processing—Monolithic Products*.

Important Note:

All parameters having Min/Max specifications are guaranteed. The Test Level column indicates the specific device testing actually performed during production and Quality inspection. Elantec performs most electrical tests using modern high-speed automatic test equipment, specifically the LTX77 Series system. Unless otherwise noted, all tests are pulsed tests, therefore $T_J = T_C = T_A$.
