## Designer's™ Data Sheet

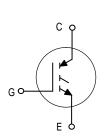

# Insulated Gate Bipolar Transistor N-Channel Enhancement-Mode Silicon Gate

This Insulated Gate Bipolar Transistor (IGBT) uses an advanced termination scheme to provide an enhanced and reliable high voltage–blocking capability. Short circuit rated IGBT's are specifically suited for applications requiring a guaranteed short circuit withstand time such as Motor Control Drives. Fast switching characteristics result in efficient operation at high frequencies.

- Industry Standard High Power TO–247 Package with Isolated Mounting Hole
- High Speed E<sub>off</sub>: 150 μJ/A typical at 125°C
- High Short Circuit Capability 10 μs minimum

**MAXIMUM RATINGS** (T<sub>J</sub> = 25°C unless otherwise noted)

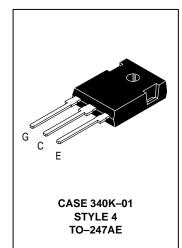

• Robust High Voltage Termination

Designer's Data for "Worst Case" Conditions — The Designer's Data Sheet permits the design of most circuits entirely from the information presented. SOA Limit curves — representing boundaries on device characteristics — are given to facilitate "worst case" design.
