## Keil starter kits for STR7 and STR9

Data Brief

The **Keil starter kits** are complete solutions for starting application development and evaluating STMicroelectronic's families of ARM<sup>®</sup> core-based microcontrollers.

They come with all the hardware and software you need to start developing applications for the STR7 ARM7TDMI™ and STR9 ARM966E™ core-based microcontrollers. The kits come complete with evaluation board and target microcontroller, the *Ulink™* USB-to-JTAG incircuit debugger/programmer Keil's *uVision3* integrated dev-elopment environment for ARM and the 16KB code-size limited version of the ARM RealView Compilation Tools.

### Starter kit architecture

*Ulink*™— USB-to-JTAG in-circuit debugger/programmer integrates fully with *uVision3*, allowing users to download the application to the target and debug it while it runs on the ST ARM core-based microcontroller on the evaluation board.

**Evaluation** board—an application board that provides a full range of features (I/Os, ADC, UART, SPI, USB...) to help users evaluate and start developing applications for the included microcontroller.

**Keil development software**— a suite of software tools for developing and debugging applications for STR7 and STR9 including:

uVision3 integrated development environment integrating the ARM RealView Compilation Tools and Keil's debugging software so that users can quickly and easily develop and debug their applications while they run on a target microcontroller.

ARM RealView Compilation Tools (RVCT) 16K code-size limited version of the optimizing C/C++ compiler for ARM™ core-based microcontrollers.
