
AKD4620B-B  
AK4620B Evaluation board Rev.1

GENERAL DESCRIPTION

The AKD4620B-B is an evaluation board for the AK4620B, the 24Bit A/D & D/A converter. The AKD4620B-B can evaluate A/D converter and D/A converter separately in addition to loopback mode (A/D→D/A). The AKD4620B-B also has the digital audio interface and can achieve the interface with digital audio systems via opt-connector.

■ **Ordering guide**

AKD4620B-B --- Evaluation board for AK4620B  
 (Cable for connecting with printer port of IBM-AT compatible PC and control software are packed with this. This control software does not operate on Windows NT.)

FUNCTION

- **Digital interface**
  - **DIT (AK4114): optical or BNC**
  - **DIR (AK4114): optical or BNC**
- **10pin header for serial control interface**

**■ Operation sequence**

1) Set up the power supply line

[+15V]	(green)	= +15V
[-15V]	(blue)	= -15V
[GND]	(black)	= 0V

Note: Each supply line should be distributed from the power supply unit.

2) Set up the evaluation modes, jumper pins and DIP switch. (See the followings.)

3) Power on

The AK4620B should be reset once bringing SW2 (PDN) "L" upon power-up.

## ■ Evaluation modes

### Applicable evaluation modes

- (1) Loopback mode (Default)
- (2) Evaluation of DAC
- (3) Evaluation of ADC

### 1) Loopback mode (Default)

#### 1-1) Analog input mode

Jumper	JP3 (LIN)	JP4 (AINL)	JP5 (RIN)	JP6 (AINR)	SW1-2 (ADM0DE)
Single-ended	SINGLE	SINGLE	SINGLE	SINGLE	OFF
Differential	DIFF	DIFF	DIFF	DIFF	ON

**2) Evaluation of D/A using DIR. (Optical link)**

The DIR generates MCLK, BICK, LRCK and SDATA from the received data through optical connector (PORT1). PORT1 is also used for the evaluation using such as CD test disk.

BNC connector is recommended for an evaluation of the Sound quality.

2-1) DIR input interface (Default: JP2="OPT")

Jumper	JP2 (RX3)
Normal & Double Speed	OPT or BNC
Quard Speed	BNC

\* DIF1=L and DIF2=H are fixed in AKD4620B-B evaluation board.

■ The function of the toggle SW.

[SW2] : Resets the AK4620B. Keep “H” during normal operation.

■ Serial control mode

The AK4620B can be controlled via the printer port (parallel port) of IBM-AT compatible PC. Connect PORT3(CR-I/F) with PC by 10-wire flat cable packed with the AKD4620B-B.

Take care of the direction of connector. There is a mark at pin#1.

Figure 2. Connect of 10 wire flat cable

■ Analog Input Buffer Circuit

1. Differential Input Mode

The AK4620B can accept input voltages from AGND to VA. The input signal range scales with the VREF voltage and is nominally 2.82Vpp (VREF = 5V). Figure 3 shows an input buffer circuit example. This is a fully differential input buffer circuit with an inverted amplifier (fc=370KHz,gain: -10dB).

The capacitor of 10nF between AINL+/- (AINR+/-) decreases the clock feedthrough noise of the modulator, and composes a 1st order LPF (fc=360kHz) with a 22Ω resistor before the capacitor.

Figure 3. Input buffer circuit in differential mode

2. Single-ended Input Mode

When the AK4620B is evaluated by single-ended mode, C49 and C90 should be removed.

Figure 4. Input buffer circuit in Single-ended mode

■ Analog Output Buffer Circuit

The differential output circuit(2nd order LPF,  $f_c=182\text{KHz}$ ,  $Q=0.637$ ,  $G=+3.9\text{dB}$ ) and LPF(1st order LPF,  $f_c=284\text{KHz}$ ,  $G=-0.84\text{dB}$ ) is implemented on board. The differential outputs of AK4620B is buffered by non-inverted circuit and output via Cannon connector (differential output). LPF adds differential outputs. NJM5534D is used for op-amp on this board that has low noise and high voltage tolerance characteristics. Analog signal is output via BNC connectors on the board. The output level is about  $2.8\text{Vrms}$  (typ@ $V_{REF}=5.0\text{V}$ ) by BNC.

<b>Control Software Manual</b>
--------------------------------

### ■ Set-up of evaluation board and control software

1. Set up the AKD4620B-B according to previous term.
2. Connect IBM-AT compatible PC with AKD4620B-B by 10-line type flat cable (packed with AKD4620B-B). Take care of the direction of 10pin header. (Please install the driver in the CD-ROM when this control software is used on Windows 2000/XP. Please refer “Installation Manual of Control Software Driver by AKM device control software”. In case of Windows95/98/ME, this installation is not needed. This control software does not operate on Windows NT.)
3. Insert the CD-ROM labeled “AKD4620B-B Evaluation Kit” into the CD-ROM drive.
4. Access the CD-ROM drive and double-click the icon of “akd4620b-b.exe” to set up the control program.
5. Then please evaluate according to the follows.

### ■ Operation flow

Keep the following flow.

1. Set up the control program according to explanation above.
2. Click “Port Reset” button.
3. Click “Write default” button

### ■ Explanation of each buttons

[Port Reset] :	Set up the USB interface board (AKDUSBIF-A) .
[Write default] :	Initialize the register of AK4620B.
[All Write] :	Write all registers that is currently displayed.
[Function1] :	Dialog to write data by keyboard operation.
[Function2] :	Dialog to write data by keyboard operation.
[Function3] :	The sequence of register setting can be set and executed.
[Function4] :	The sequence that is created on [Function3] can be assigned to buttons and executed.
[Function5] :	The register setting that is created by [SAVE] function on main window can be assigned to buttons and executed.
[SAVE] :	Save the current register setting.
[OPEN] :	Write the saved values to all register.
[Write] :	Dialog to write data by mouse operation.

### ■ Indication of data

Input data is indicated on the register map. Red letter indicates “H” or “1” and blue one indicates “L” or “0”. Blank is the part that is not defined in the datasheet.

## ■ Explanation of each dialog

### 1. [Write Dialog]: Dialog to write data by mouse operation

There are dialogs corresponding to each register.

Click the [Write] button corresponding to each register to set up the dialog. If you check the check box, data becomes “H” or “1”. If not, “L” or “0”.

If you want to write the input data to the AK4620B, click [OK] button. If not, click [Cancel] button.

### 2. [Function1 Dialog]: Dialog to write data by keyboard operation

Address Box: Input registers address in 2 figures of hexadecimal.

Data Box: Input registers data in 2 figures of hexadecimal.

If you want to write the input data to the AK4620B, click [OK] button. If not, click [Cancel] button.

### 3. [Function2 Dialog]: Dialog to evaluate volume

Address Box: Input registers address in 2 figures of hexadecimal.

Start Data Box: Input starts data in 2 figures of hexadecimal.

End Data Box: Input end data in 2 figures of hexadecimal.

Interval Box: Data is written to the AK4620B by this interval.

Step Box: Data changes by this step.

Mode Select Box:

If you check this check box, data reaches end data, and returns to start data.

[Example] Start Data = 00, End Data = 09

Data flow: 00 01 02 03 04 05 06 07 08 09 09 08 07 06 05 04 03 02 01 00

If you do not check this check box, data reaches end data, but does not return to start data.

[Example] Start Data = 00, End Data = 09

Data flow: 00 01 02 03 04 05 06 07 08 09

If you want to write the input data to the AK4620B, click [OK] button. If not, click [Cancel] button.

#### 4. [SAVE] and [OPEN]

##### 4-1. [SAVE]

All of current register setting values displayed on the main window are saved to the file. The extension of file name is “.akr”.

<Operation flow>

- (1) Click [SAVE] Button.
- (2) Set the file name and click [SAVE] Button. The extension of file name is “.akr”.

##### 4-2. [OPEN]

The register setting values saved by [SAVE] are written to the AK4620B. The file type is the same as [SAVE].

<Operation flow>

- (1) Click [OPEN] Button.
- (2) Select the file (\*.akr) and Click [OPEN] Button.

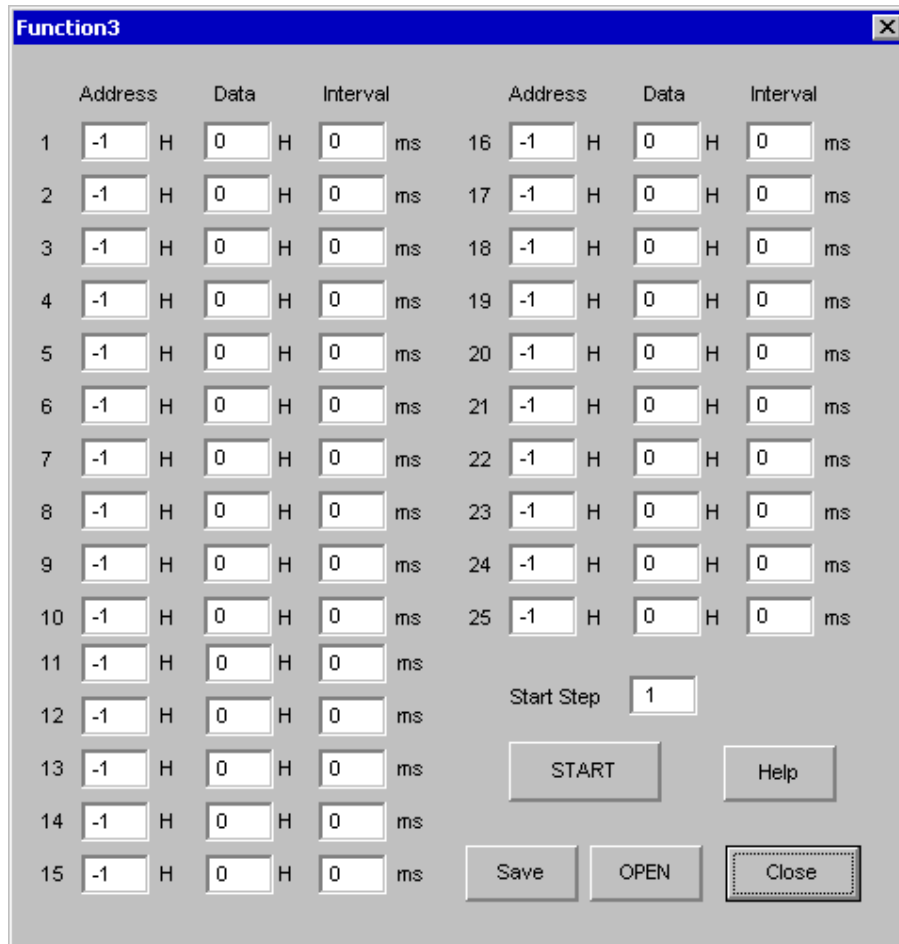

**5. [Function3 Dialog]**

The sequence of register setting can be set and executed.

- (1) Click [F3] Button.
- (2) Set the control sequence.  
Set the address, Data and Interval time. Set "-1" to the address of the step where the sequence should be paused.
- (3) Click [START] button. Then this sequence is executed.

The sequence is paused at the step of Interval="-1". Click [START] button, the sequence restarts from the paused step.

This sequence can be saved and opened by [SAVE] and [OPEN] button on the Function3 window. The extension of file name is "aks".

**Figure 6. Window of [F3]**

**6. [Function4 Dialog]**

The sequence file (\*.aks) saved by [Function3] can be listed up to 10 files, assigned to buttons and then executed. When [F4] button is clicked, the window as shown in Figure 10 opens.

Figure 7. [F4] window

## 6-1. [OPEN] buttons on left side and [START] buttons

(1) Click [OPEN] button and select the sequence file (\*.aks) saved by [Function3].

The sequence file name is displayed as shown in Figure 11. ( In case that the selected sequence file name is "DAC\_Stereo\_ON.aks")

**Figure 8. [F4] window(2)**

(2) Click [START] button, then the sequence is executed.

## 6-2. [SAVE] and [OPEN] buttons on right side

[SAVE] : The name assign of sequence file displayed on [Function4] window can be saved to the file. The file name is "\*.ak4".

[OPEN] : The name assign of sequence file(\*.ak4) saved by [SAVE] is loaded.

## 6-3. Note

(1) This function doesn't support the pause function of sequence function.

(2) All files used by [SAVE] and [OPEN] function on right side need to be in the same folder.

(3) When the sequence is changed in [Function3], the sequence file (\*.aks) should be loaded again in order to reflect the change.

## 7. [Function5 Dialog]

The register setting file(\*.akr) saved by [SAVE] function on main window can be listed up to 10 files, assigned to buttons and then executed. When [F5] button is clicked, the window as shown in Figure 12 opens.

Figure 9. [F5] window

### 7-1. [OPEN] buttons on left side and [WRITE] button

(1) Click [OPEN] button and select the register setting file (\*.akr).

The register setting file name is displayed as shown in Figure 13. (In case that the selected file name is "DAC\_Output.akr")

(2) Click [WRITE] button, then the register setting is executed.

Figure 10. [F5] windows(2)

#### 7-2. [SAVE] and [OPEN] buttons on right side

[SAVE] : The name assign of register setting file displayed on [Function5] window can be saved to the file. The file name is “\*.ak5”.

[OPEN] : The name assign of register setting file(\*.ak5) saved by [SAVE] is loaded.

#### 7-3. Note

- (1) All files used by [SAVE] and [OPEN] function on right side need to be in the same folder.
- (2) When the register setting is changed by [SAVE] Button on the main window, the register setting file (\*.akr) should be loaded again in order to reflect the change.

<b>MEASUREMENT RESULTS</b>
----------------------------

## [Measurement condition]

Measurement unit: Audio Precision System Two Cascade

MCLK: 512fs (44.1kHz), 256fs (96kHz), 128fs (192kHz)

BICK: 64fs

Power supply Voltage: VA=VT=5.0V, VD=3.3V

Interface: Internal DIT or DIR (44.1kHz, 96kHz, 192KHz)

Temperature: Room Temp.

#### IMPORTANT NOTICE

- These products and their specifications are subject to change without notice. Before considering any use or application, consult the Asahi Kasei Microsystems Co., Ltd. (AKM) sales office or authorized distributor concerning their current status.
- AKM assumes no liability for infringement of any patent, intellectual property, or other right in the application or use of any information contained herein.
- Any export of these products, or devices or systems containing them, may require an export license or other official approval under the law and regulations of the country of export pertaining to customs and tariffs, currency exchange, or strategic materials.
- AKM products are neither intended nor authorized for use as critical components in any safety, life support, or other hazard related device or system, and AKM assumes no responsibility relating to any such use, except with the express written consent of the Representative Director of AKM. As used here:
  - (a) A hazard related device or system is one designed or intended for life support or maintenance of safety or for applications in medicine, aerospace, nuclear energy, or other fields, in which its failure to function or perform may reasonably be expected to result in loss of life or in significant injury or damage to person or property.
  - (b) A critical component is one whose failure to function or perform may reasonably be expected to result, whether directly or indirectly, in the loss of the safety or effectiveness of the device or system containing it, and which must therefore meet very high standards of performance and reliability.
- It is the responsibility of the buyer or distributor of an AKM product who distributes, disposes of, or otherwise places the product with a third party to notify that party in advance of the above content and conditions, and the buyer or distributor agrees to assume any and all responsibility and liability for and hold AKM harmless from any and all claims arising from the use of said product in the absence of such notification.
