

AZP92

ECL/PECL $\div 1$, $\div 2$ Clock Generation Chip with Selectable Enable

FEATURES

- Green and RoHS Compliant / Lead (Pb) Free Package Available
- 3.0V to 5.5V Operation
- Selectable Divide Ratio
- Selectable Enable Polarity and Threshold (CMOS/TTL or PECL)
- Selectable Input Biasing
- High Bandwidth for ≥ 1 GHz
- -147 dBc/Hz ($\div 1$), -150 dBc/Hz ($\div 2$) Typical Noise Floor
- Available in a MLP 8 (2x2) Package
- S Parameter and IBIS Model Files Available on Arizona Microtek Website

PACKAGE AVAILABILITY

PACKAGE	PART NO.	MARKING	NOTES
MLP 8 (2x2) Green / RoHS Compliant / Lead (Pb) Free	AZP92NAG	P1G <Date Code>	1,2

- 1 Add R1 at end of part number for 7 inch (1K parts), R2 for 13 inch (2.5K parts) Tape & Reel.
- 2 Date code format: "Y" for year followed by "WW" for week.

DESCRIPTION

The AZP92 is a specialized $\div 1$ or $\div 2$ clock generation part including an enable/reset function. The divide ratio is selected with the DIV-SEL pin/pad. When DIV-SEL is open (NC), the AZP92 functions as a standard receiver. If DIV-SEL is connected to V_{EE} , it functions as a $\div 2$ divider.

A selectable enable is provided which also functions as a reset when the $\div 2$ mode is selected. Enable (EN) functionality is selected with the EN-SEL pin/pad which has three valid states: open (NC), V_{EE} , or connected to V_{EE} via a 20k Ω resistor. Leaving EN-SEL open or connecting it to V_{EE} will select the EN pin/pad to function as an active high CMOS/TTL enable. When EN-SEL is open, an internal 75k Ω pull-up resistor is selected which enables the outputs whenever EN is left open. When EN-SEL is connected to V_{EE} , an internal 75k Ω pull-down resistor is selected which disables the outputs whenever EN is left open.

Connecting the EN-SEL to V_{EE} with a 20k Ω resistor will select the EN pin/pad to function as an active low PECL/ECL enable with an internal 75k Ω pull-down resistor. In this mode, outputs are enabled when EN is left open (NC). This default logic condition can be overridden by connecting the EN to V_{CC} with an external resistor of ≤ 20 k Ω . Refer to the enable truth table on the next page for detailed operation.

MLP 8, 2x2 mm Package (AZP92NA)

The AZP92NA provides a V_{BB} with an 1880 Ω internal bias resistor from D to V_{BB} . This feature allows AC coupling with minimal external components. The V_{BB} pin supports 1.5mA sink/source current and should be bypassed to ground or V_{CC} with a 0.01 μ F capacitor.

NOTE: The specifications in the ECL/PECL tables are valid when thermal equilibrium has been established.
